FACULTY OF SCIENCE
SECTION CONTENTS

Personnel .................................................................................................................. 359

1 The Memorial University of Newfoundland Code .................................................. 363

2 Research Units ..................................................................................................... 363
  2.1 Centre for Earth Resources Research (CERR) ................................................. 363
    2.1.1 Research Group ....................................................................................... 364
    2.1.2 Scope and Objectives ............................................................................. 364
    2.1.3 Organization .......................................................................................... 364
  2.2 Ocean Sciences Centre (OSC) .......................................................................... 364

3 Faculty Description .............................................................................................. 365

4 Joint Programs ..................................................................................................... 365
  4.1 Joint Honours .................................................................................................. 365
    4.1.1 Applied Mathematics and Chemistry Joint Honours (B.Sc. Only) .......... 365
    4.1.2 Applied Mathematics and Physics Joint Honours ................................. 366
    4.1.3 Biochemistry and Cell Biology Joint Honours ........................................ 366
    4.1.4 Biochemistry and Chemistry Joint Honours ........................................... 366
    4.1.5 Biochemistry and Physics Joint Honours ................................................ 366
    4.1.6 Biochemistry and Psychology (Behavioural Neuroscience) Joint Honours 367
    4.1.7 Biochemistry (Nutrition) and Psychology (Behavioural Neuroscience) Joint Honours 367
    4.1.8 Biology and Earth Sciences Joint Honours .............................................. 367
    4.1.9 Biology and Psychology Joint Honours ................................................... 367
    4.1.10 Biology and Psychology (Behavioural Neuroscience) Joint Honours ...... 368
    4.1.11 Biology and Statistics Joint Honours (B.Sc. Only) ................................. 368
    4.1.12 Chemistry and Earth Sciences Joint Honours ......................................... 368
    4.1.13 Chemistry and Physics Joint Honours .................................................... 368
    4.1.14 Computer Science and Geography Joint Honours (B.Sc. Only) .......... 369
    4.1.15 Computer Science and Physics Joint Honours ........................................ 369
    4.1.16 Computer Science and Pure Mathematics Joint Honours (B.Sc. Only) 369
    4.1.17 Computer Science and Statistics Joint Honours (B.Sc. Only) .......... 369
    4.1.18 Earth Sciences and Geography Joint Honours (B.Sc. Only) .................. 369
    4.1.19 Earth Sciences and Physics Joint Honours ............................................ 370
    4.1.20 Geophysics and Physical Oceanography Joint Honours ...................... 370
    4.1.21 Pure Mathematics and Statistics Joint Honours .................................... 370
  4.2 Joint Majors ...................................................................................................... 370
    4.2.1 Applied Mathematics and Computer Science Joint Major (B.Sc. Only) .... 370
    4.2.2 Applied Mathematics and Economics Joint Major (B.Sc. Only) .......... 370
    4.2.3 Applied Mathematics and Physics Joint Major (B.Sc. Only) ................. 371
    4.2.4 Computer Science and Economics Joint Major (B.Sc. Only) ............... 371
    4.2.5 Computer Science and Geography Joint Major (B.Sc. Only) ............... 371
    4.2.6 Computer Science and Physics Joint Major ............................................. 371
    4.2.7 Computer Science and Pure Mathematics Joint Major (B.Sc. Only) .... 371
    4.2.8 Computer Science and Statistics Joint Major (B.Sc. Only) ................... 371
    4.2.9 Earth Sciences and Physics Joint Major .................................................. 372
    4.2.10 Economics and Pure Mathematics Joint Major (B.Sc. Only) ............ 372
    4.2.11 Economics and Statistics Joint Major (B.Sc. Only) ............................... 372
    4.2.12 Economics (Co-operative) and Statistics Joint Major (B.Sc. Only) .... 372

4.3 Option Programs ............................................................................................... 373
    4.3.1 Physics and Chemistry Option Programs .............................................. 373

5 Degree Regulations .............................................................................................. 373
  5.1 Admission to the Department of Subject of Major .......................................... 373
  5.2 Limited Enrolment Courses ............................................................................. 374
  5.3 Regulations to Govern Supplementary Examinations in the Departments of Biochemistry, Computer Science, Mathematics and Statistics, and Physics and Physical Oceanography 374
  5.4 Regulations for the General Degree of Bachelor of Science ......................... 374
  5.5 Regulations for the Honours Degree of Bachelor of Science ......................... 375

6 Waiver of Regulations for Undergraduate Students ............................................ 376

7 Program Regulations .......................................................................................... 377
  7.1 Biochemistry .................................................................................................... 377
    7.1.1 Admission to Programs .......................................................................... 377
    7.1.2 Major in Biochemistry .......................................................................... 377
    7.1.3 Nutrition Program .................................................................................. 378
    7.1.4 Professional Program in Dietetics ......................................................... 379
  7.2 Biology ............................................................................................................. 380
    7.2.1 Entrance Requirements ......................................................................... 380
    7.2.2 Minor in Biology ..................................................................................... 380
    7.2.3 General Degree - Major in Biology ....................................................... 380
    7.2.4 Honours Degrees ................................................................................... 381
    7.2.5 Honours in Biology ................................................................................ 381
  7.3 Chemistry ........................................................................................................ 381
    7.3.1 Undergraduate Handbook ...................................................................... 382
    7.3.2 Faculty Advisors .................................................................................... 382
    7.3.3 Minor in Chemistry ................................................................................ 382
7.3.4 General Degree - Major in Chemistry ........................................ 382
7.3.5 Honours Degree in Chemistry ........................................... 382
7.3.6 Course Restrictions .......................................................... 383
7.4 Computer Science ...................................................................... 383
7.4.1 Major in Computer Science .................................................. 383
7.4.2 Honours in Computer Science .............................................. 383
7.4.3 Honours in Computer Science (Software Engineering) (B.Sc. Only) .............................................................................. 383
7.4.4 Computer Industry Internship Option (CIIO): ......................... 383
7.4.5 Minor in Computer Science .................................................... 384
7.4.6 Course Numbering Scheme ................................................... 384
7.4.7 Supplementary Examinations ................................................ 385
7.4.8 Faculty Advisors ................................................................... 385
7.4.9 Undergraduate Handbook ..................................................... 385
7.5 Earth Sciences ............................................................................ 385
7.5.1 Undergraduate Handbook ..................................................... 385
7.5.2 Entrance Requirements ........................................................ 385
7.5.3 Minor in Earth Sciences ........................................................ 385
7.5.4 Major Programs in Earth Sciences ......................................... 385
7.5.5 Honours B.Sc. Degree in Earth Sciences .............................. 386
7.5.6 General B.Sc. Degree in Earth Sciences .............................. 386
7.5.7 Credit Restrictions for Present Earth Sciences (EASC) Courses with Former Courses Table ....................................................... 386
7.6 Economics .................................................................................. 387
7.7 Geography .................................................................................. 387
7.8 Mathematics and Statistics ........................................................ 387
7.8.1 Regulations ........................................................................... 387
7.8.2 Faculty Advisors ................................................................... 388
7.8.3 Course Numbering System .................................................... 388
7.8.4 Major in Applied Mathematics (B.Sc. Only) ......................... 388
7.8.5 Major in Pure Mathematics ................................................... 388
7.8.6 Major in Statistics ................................................................. 389
7.8.7 Honours in Applied Mathematics (B.Sc. Only) ..................... 389
7.8.8 Honours in Pure Mathematics .............................................. 389
7.8.9 Honours in Statistics ............................................................ 389
7.8.10 Minor in Mathematics ......................................................... 389
7.8.11 Minor in Statistics ............................................................... 389
7.9 Physics and Physical Oceanography .......................................... 389
7.9.1 Minor in Physics ................................................................... 390
7.9.2 Major in Physics .................................................................. 390
7.9.3 Honours in Physics ............................................................. 390
7.9.4 Major in Environmental Physics .......................................... 391
7.9.5 Honours in Environmental Physics ...................................... 391
7.10 Psychology ............................................................................... 392
7.10.1 Admission to Major Programs ............................................. 392
7.10.2 Admission to Honours Programs ........................................ 393
7.10.3 Requirements for a Major in Psychology ............................. 393
7.10.4 Requirements for Honours in Psychology ............................ 393
7.10.5 Requirements for a Major in Behavioural Neuroscience (B.Sc. Only) .............................................................................. 393
7.10.6 Requirements for Honours in Behavioural Neuroscience (B.Sc. Only) .......................................................... 393
7.10.7 Requirements for a Minor in Psychology .............................. 394
7.10.8 Requirements for Major and Honours in Psychology (Co-operative) (B.A. or B.Sc.), and Major and Honours in Behavioural Neuroscience (Co-operative) (B.Sc. only) .......................... 394
7.10.9 Suggested Course Sequences .............................................. 396
7.11 Science ..................................................................................... 401
8 Course Descriptions .................................................................... 401
8.1 Biochemistry ............................................................................. 401
8.2 Biology ....................................................................................... 403
8.3 Chemistry .................................................................................. 407
8.4 Computer Science ...................................................................... 408
8.4.1 First Year Courses ................................................................ 408
8.4.2 Second Year Courses ............................................................ 409
8.4.3 Third Year Courses .............................................................. 409
8.4.4 Fourth Year Courses ............................................................ 410
8.5 Earth Sciences ............................................................................ 411
8.5.1 First Year ............................................................................. 411
8.5.2 Second Year .......................................................................... 411
8.5.3 Third Year ............................................................................ 412
8.5.4 Fourth Year ........................................................................... 413
8.6 Economics ................................................................................. 414
8.7 Geography .................................................................................. 415
8.8 Mathematics and Statistics ........................................................ 415
8.8.1 Foundation Courses .............................................................. 415
8.8.2 Accelerated M103F/M1051 Mathematics Skills Program/Finite Mathematics II (W) .......................................................... 415
8.8.3 Common Core Mathematics Courses ................................ .... 415
8.8.4 Applied Mathematics Courses ............................................ 416
8.8.5 Pure Mathematics Courses .................................................. 416
8.8.6 Statistics Courses ................................................................. 418
8.9 Physics and Physical Oceanography .......................................... 419
8.10 Psychology ............................................................................... 420
8.10.1 Non-Restricted Courses ....................................................... 420
8.10.2 Majors Courses .................................................................... 422
8.10.3 Psychology Work Term Descriptions .................................. 424
8.11 Science ..................................................................................... 424
List of Tables

Academic Course Program - Economics (Co-operative) and Statistics Joint Major (B.Sc. Only) Table ................................................................. 373
Credit Restrictions for Present Physics Courses with Former Courses Table ................................................................................................. 392
Suggested Course Sequence for B.A. in Psychology (Co-operative) ........................................................................................................... 396
Suggested Course Sequence for B.Sc. in Psychology (Co-operative) ........................................................................................................ 397
Suggested Course Sequence for B.A. (Honours) in Psychology (Co-operative) ......................................................................................... 398
Suggested Course Sequence for B.Sc. (Honours) in Psychology (Co-operative) ....................................................................................... 399
Suggested Course Sequence for B.Sc. in Behavioural Neuroscience (Co-operative) ............................................................. 400
Suggested Course Sequence for B.Sc. (Honours) in Behavioural Neuroscience (Co-operative) .................................................. 401
Dean
Abrahams, M., B.Sc.(Hons.) Western, M.Sc. Queen's, Ph.D. Simon Fraser, Professor of Biology; Joint appointment with Ocean Sciences Centre

Associate Dean (Administration and Undergraduate)
Foster, A., B.Sc. Dalhousie, M.Math Waterloo, Ph.D. Dalhousie; Motivational Teaching Award, 2001; Associate Professor of Mathematics and Statistics

Associate Dean (Research)
Courage, M.L., B.A. Memorial, M.Sc. University of Alberta, Ph.D. Memorial; Professor (Psychology); Cross appointment to the Discipline of Pediatrics, Faculty of Medicine

Manager, Finance & Administration
Rideout, J., B.Com.(Co-op)(Hons.) Memorial, C.M.A. (Newfoundland)

Department of Biochemistry
Head
Mulligan, M.E., B.Sc.(Hons.) National University of Ireland, Ph.D. Harvard; Winner of the President's Award for Distinguished Teaching, 1999; Professor

Professors Emeriti

Professors
Brosnan, M.E., B.A.(Hons.), M.Sc., Ph.D. Toronto; Cross appointment with Faculty of Medicine
Davis, P.J., B.Sc., Ph.D. Memorial
Healey, D.H., B.Sc.(Hons.), Ph.D. Birmingham Herzberg, G.R., B.S., Ph.D. Maine
Hoover, R., B.Sc.(Hons.) Ceylon, M.Sc. Leeds, Ph.D. Alberta
Hulan, H.W., B.Sc.(Hons.), B.Sc. McGill, Ph.D. Maine
McGowan, R.A., B.Sc.(Hons.) Brock, Ph.D. SUNY, Buffalo; Joint appointment with Department of Biology; Deputy Head (Undergraduate)
Robinson, J.J., B.Sc.(Hons.) University College Dublin, M.Sc. Trinity College Dublin, Ph.D. Alberta
Shahidi, F., B.Sc. Shiraz, Ph.D. McGill, University Research Professor, Awarded 1998; Cross appointments with Ocean Sciences Centre and the Department of Biology

Associate Professors
Bertolo, R.F.P., B.A.Sc.(Hons.) McMaster, M.Sc., Ph.D. Guelph; Canada Research Chair in Human Nutrition; Deputy Head (Graduate Studies)
Brunton, J.A., B.A.Sc. Guelph, Ph.D. McMaster
Cheema, S.K., B.Sc. Punjab, M.Sc. Punjab Agricultural, Ph.D. Post Graduate Institute of Medical Education and Research; Cross appointment with Faculty of Medicine
MacPhee, D.J., B.Sc.(Hons.) Prince Edward Island, Ph.D. Western Ontario; Cross appointment from Faculty of Medicine
Nag, K., B.Sc.(Hons.), M.Sc. (Part I) Calcula, M.Sc., Ph.D. Memorial
Randell, E.W., B.Sc.(Hons.), Ph.D. Memorial; Cross appointment from Faculty of Medicine
Volkoff, H., B.Sc. Pierre and Marie Curie University, M.Sc. University of Aix-Marseille III, Ph.D. Clemson University; Joint appointment with Department of Biology

Assistant Professor
Booth, V.K., B.Sc.(Hons.) Victoria, M.Sc. Waterloo, Ph.D. Toronto; Canada Research Chair in Proteomics; Cross appointment with Department of Physics and Physical Oceanography

Adjunct Professor
Banoub, J., B.Sc.(Hons.) Alexandria, Ph.D. Montreal

Administrative Assistant
Sinnott, A.L., B.Com., M.B.A. Memorial

Amino Acid Laboratory Supervisor
Skinner, C.T.

Senior Technician, Student Laboratory
Murphy, M.J., B.Sc., B.Ed. Memorial

Supply Supervisor
Murphy, H.L.

Department of Biology
Head
Marino, P., B.A. Vermont, M.Sc. Northern Arizona, Ph.D. Alberta

Professors Emeriti

Honorary Research Professors
Colbro, M., B.Sc., M.Sc. Alberta, Ph.D. Queens land

Director of Memorial University of Newfoundland Botanical Garden
Nicholls, K.W., B.Sc.(Hons.) Univ. College of Wales, Ph.D. British Columbia

Professors
Abrahams, M., B.Sc.(Hons.) Western, M.Sc. Queen's, Ph.D. Simon Fraser; Dean of Science
Carr, S.M., B.Sc. California Polytechnic, C.Phil., Ph.D. University of California, Berkeley; Cross appointment to Faculty of Medicine
Finney-Crawley, J.R., B.Sc. Wales, M.Sc., Ph.D. London; Winner of President's Award for Distinguished Teaching 2000-2001

Associate Professors
Dunbrack, R., B.A. New Brunswick, Ph.D. Simon Fraser Edinger, E., B.A. California, M.Sc., Ph.D. McMaster; Joint appointment with Department of Geography
Gardner, G., B.Sc. Guelph, M.Sc., Ph.D. British Columbia; Associate Vice-President (Academic) (on leave)
Hermanutz, L., B.Sc. Guelph, M.Sc. Windsor, Ph.D. Western Ontario; Cross appointment with Botanical Garden
Hooper, R.G., B.Sc. Victoria, Ph.D. Portsmouth; Curator, Phycological Herbarium; Director, Bonne Bay Marine Station; Cross appointment to Sir Wilfred Grenfell College
Igamberdiev, A.U., Dr.Sc. Russian Acad. Sciences, Ph.D., M.S. Voronezh Knoechel, R., B.Sc., Cornell, Ph.D. McGill
McGowan, R.A., B.Sc.(Hons.) Brock, Ph.D. SUNY/AB; Joint appointment with Department of Biochemistry
Murrin, F., B.Sc.(Hons.) Memorial, M.Sc. Acadia, Ph.D. Queen's Snelgrove, P., B.Sc.(Hons.) Memorial, M.Sc. McGill, Ph.D. Woods Hole; Joint appointment with Ocean Sciences Centre
Staveley, B.E., B.Sc., M.Sc. Guelph, Ph.D. Alberta
Volkoff, H., B.Sc. Pierre et Marie Curie University, M.Sc. University of Aix-Marseille III, Ph.D. Clemson University; Joint appointment with Department of Biochemistry

Assistant Professors
Profectors Emeriti
Gogan, N.J., B.Sc.(Hons.), Ph.D. National University of Ireland, Dublin, F.C.I.C.

Honorary Research Professor

Professors
Bodwell, G.J., B.Sc., M.Sc. Victoria, Dr. rer. nat. Tech. Univ. Braunschweig; Deputy Head (Graduate Studies and Research); Winner of the President’s Award for Outstanding Research, 1998-1999; Winner of the Petro Canada Young Innovator Award, 1999-2000
Georgiou, P.E., B.Sc.(Hons.) Witwatersrand, Ph.D. McGill, F.C.I.C.
Helleur, R.J., B.Sc. Concordia, M.Sc. McGill, Ph.D. Queen’s; Cross appointment with Ocean Sciences Centre
Mezey, P.G., M.Sc., Ph.D. Budapest, D. Sc. Saskatchewan; Canada Research Chair in Scientific Modelling and Simulation
Poirier, R.A., B.Sc., M.Sc. Laurentian, Ph.D. Toronto, F.C.I.C.; Winner of the President’s Award for Outstanding Research, 1986-1987
Thompson, L.K., B.Sc., Ph.D. Manchester, F.C.I.C.; University Research Professor, Awarded 1995

Associate Professors
Bottaro, C.S., B.Sc.(Hons.) St. Mary’s, Ph.D. Dalhousie
Davis, R.W., B.Sc. Memorial, Ph.D. British Columbia
Flinn, C.G., B.Sc., M.Sc., Ph.D. Dalhousie; Deputy Head (Undergraduate Studies)
Merschrod, E., A.B. Bryn Mawr Coll., M.S., Ph.D. Cornell
Pansare, S.V., B.Sc., M.Sc., Univ. Pune (India), Ph.D. Alberta
Thompson, D.W., B.Sc.(Hons.), M.Sc. Queen’s, Ph.D. York
Zhao, Y., B.S., M.S. Dalan, Ph.D. Alberta; Winner of the Petro Canada Young Innovator Award, 2006-2007

Assistant Professors
Fridgen, T.D., B.Sc.(Hons.) Trent, B.Ed., Ph.D. Queen’s
Kerton, F.M., B.Sc.(Hons.) Univ of Kent, D.Phil. Univ of Sussex
Kozak, C.M., B.Sc.(Hons.) McMaster, Ph.D. UBC

Assistant Professors (term)
Ghumman, A., B.Sc., M.Sc. Punjab, Ph.D. University of Limerick
Hattenhauer, K.M., B.Sc. (Hons.) Memorial
Warburton, P., B.Sc. (Hons.), M.Sc., Ph.D. University of Saskatchewan

Cross-Appointments
Parrish, C.C., B.Sc. Wales, Ph.D. Dalhousie; Cross appointment from Ocean Sciences Centre
Poduska, K., B.A. Carleton College, Ph.D. Cornell

Adjunct Professors
Banoub, J.H., B.Sc.(Hons.) University of Alexandria, Egypt, Ph.D. University of Montreal
Keefe, D., B.Sc.(Hons.) Memorial, Ph.D. University of Alberta
Miller, D., B.Sc., M.Sc. Memorial
Schneider, C., B.Sc.(Hons.), M.Sc. Universite de Nancy I (France), Ph.D. Keene University

Director, CREAT Network
Miller, D., B.Sc., M.Sc. Memorial

Chemistry Stores Supervisor
Ballard, S.

Undergraduate Laboratory Supervisor
Gulliver, G.

Department of Computer Science
Head
Brown, E., B.Sc.(Hons.), Memorial, M.Sc. U. of T., Ph.D. Toronto, LL.B. Victoria; Associate Professor

Professors
Banzhaf, W., Dipl. Phys. Ludwig-Maximilian, Munich, Dr. rer. nat. Fidericiana, Karlsruhe
Bartha, M., M.Sc., Ph.D. Jozsef Attila University, Hungary
Gillard, P., B.Sc., M.Sc., Ph.D. Memorial
Department of Mathematics and Statistics

Head
Radford, C., B.Sc., Ph.D. Sydney

Professors Emeriti
Booth, P.J., B.Sc., M.Sc., Ph.D., Hull; Winner of the Dean of Science Distinguished Scholar Medal. 1996

Mathematics

Professors
Bahourin, Y., D.Sc., Ph.D. Moscow; University Research Professor, Awarded 2002
Goodaire, E.G., B.Sc. Toronto, Ph.D. British Columbia
Heath, P.R., B.Sc., Ph.D. Hull, DBS Durham, MTS Queen's
Kocabiyik, S., B.Sc., M.Sc. Middle East Tech., Ph.D. Western Ontario; Petro-Canada Young Innovators Award, 2000
Parmenter, M.M., B.Sc. Toronto, Ph.D. Alberta
Pike, D., B.Math. Waterloo, MAM, Ph.D. Auburn, FTICA; Cross appointment to Department of Computer Science
Shalaby, N.A.I., M.A. York, Ph.D. McMaster
Watson, B., B.A., M.A., Ph.D. Western Ontario
Xiao, J., M.Sc. Hunan, Ph.D. Peking
Zhao, X., B.S., M.S. Northwest, Ph.D. Academia Sinica; University Research Professor, Awarded 2008

Associate Professors
Booth, I., B.Sc. Memorial, M.Sc., Ph.D. Waterloo; Cross appointment to Department of Physics and Physical Oceanography
Foster, A., B.Sc., Ph.D. Dalhousie, M.Math Waterloo; Associate Dean (Administration and Undergraduate)
Haynes, R.D., B.Sc. Memorial, M.Sc., Ph.D. Simon Fraser
Mantyk, S., B.A., M.B.A. Sask., M.Math., Ph.D. Waterloo
Merkl, M., Diploma in Theoretical Physics, EPF Lausanne, Ph.D. Toronto
Ou, C.H., B.A. Peking, Ph.D. Hong Kong
Rees, R.S., B.Sc., B.Med.Sc., Ph.D. Queen's, FTICA; Hall Medal, 1999
Suvak, J.A., B.S. St. Martin's College, M.S., Ph.D. Arizona
Yuan, Y., B.Sc. Wuhan, M.Sc. Central South Univ. of Tech., Ph.D. Western Ontario; UFA 2004

Assistant Professors
Alam, J., B.Sc., M.Sc. Chittagong, M.Sc., Alberta, Ph.D., McMaster
Baird, T.J., B.Sc. Queen's, Ph.D. Toronto
Dyer, T.D., B.Sc.(Hon.) Memorial, M.Sc., Ph.D. Simon Fraser
Kondratieva, M., M.Sc. Moscow Inst. of Electronics & Math, Ph.D. Toronto; Joint appointment with Faculty of Education
Kotchetrov, M., M.Sc. Moscow State (Lomonosov), Ph.D. Memorial, Cand. Sc. Moscow State
Niu, Z., B.Sc., M.Sc. Wuhan, Ph.D. Toronto
Sadov, S., M.Sc. Moscow Inst. of Electronics and Math, Ph.D. Keldysh Inst. for Applied Math

Visiting Assistant Professor
Sullivan, S.P., B.Sc., Ph.D. Memorial

Laboratory Instructor
O'Reilly, G., B.Sc. Memorial

Statistics

Professor
Sutradasr, B.C., B.Sc. Dacca, M.Sc. Dacca and Western Ontario, Ph.D. Western Ontario; University Research Professor, Awarded 2004

Associate Professors
Fan, Z., B.Sc., M.Sc. Shandong, Ph.D. Gottingen
Loredo-Osti, J.C., B.Sc., M.Sc. Universidad Autonoma, Ph.D. Dalhousie, Graduate Officer
Wang, H., B.Sc. Beijing Normal, Ph.D. Regina

Assistant Professors
Sneddon, G., B.Sc.(Hon.) Acadia, M.Sc., Ph.D. Dalhousie
Varyath, A., B.Sc., Calcit, M.Sc. Kerala Agricultural, Post Graduate Diploma Indian Statistical Institute, Ph.D. Waterloo

Adjunct Professor
Cadigan, N., B.Sc., MAS Memorial, Ph.D. Waterloo

Cross-Appointment
Gadag, V., B.Sc., M.Sc. Karnatak, M.Phil., Ph.D. Poona; Professor of Biostatistics, Cross appointment from Department of Health Statistics and Health Information Systems

Consultants for Master of Applied Statistics Program
Cadigan, N., B.Sc., M.A.S. Memorial, Ph.D. Waterloo; Department of Fisheries and Oceans, St. John's
Lye, L.M., B.Sc.(Hons.) Bolton Inst., Ph.D. Manitoba, P.Eng.; Faculty of Engineering and Applied Science, Memorial University of Newfoundland
Schneider, D.C., B.Sc., Duke, Ph.D. SUNY, Stony Brook; Ocean Sciences Centre, NICOS

Undergraduate Officer
Johnson, H., B.Sc. Memorial

Administrative Staff Specialist
English, R.

Department of Physics and Physical Oceanography

Head
de Young, B., B.Sc., M.Sc. Memorial, Ph.D. British Columbia; Appointed to Robert A. Bartlett Professorship in Oceanography; Winner of the President's Award for Outstanding Research, 1997-1998; Cross appointment with Ocean Sciences Centre; Professor

Professors Emeriti
Cho, C.W., B.Sc. Seoul, M.A., Ph.D. Toronto
Clouter, M.J., M.Sc. Memorial, Ph.D. Toronto; University Research Professor, Awarded 2000

Professors
Afanassiev, I., Ph.D. P.P. Shirshov Institute of Oceanology, Russian Acad., M.Sc. Moscow Physical-Technical University
Lagowski, J.B., B.Sc. Manitoba, M.Sc., Ph.D. Toronto
Lewis, J.C., B.Sc., M.Sc. Carleton, Ph.D. Toronto
Plumer, M., B.Sc. St. Francis Xavier, M.Sc. Dalhousie, Ph.D. Toronto
Whitehead, J.P., B.Sc. St. Andrew's, Ph.D. Alberta

Associate Professors
Andrews, G.T., B.Sc., M.Sc., Ph.D. Memorial
Chen, Q., B.Sc. Shanghai Jiao Tong University China, M.Sc., Ph.D. Shanghai Institute of Optics and Fine Mechanics, China (CRC Photonics); Cross appointment with the Faculty of Engineering and Applied Science
Curnoe, S.H., B.Sc. Toronto, Ph.D. British Columbia (NSERC UFA); Winner of the President’s Award for Outstanding Research. 2005-2006
Poduska, K., B.A. Carleton College, M.S., Ph.D. Cornell (on leave)
Quirion, G., B.Sc., M.Sc., Ph.D. Sherbrooke
Tarasoft, L., B.Sc., Guelph, M.Sc., Ph.D. Toronto; CRC Glacial Dynamics Modelling
Zedel, L., B.Sc., M.Sc. Victoria, Ph.D. British Columbia; Petro Canada Young Innovators Award, Awarded 2001
Adapted from the University Calendar

1 The Memorial University of Newfoundland Code
The attention of all members of the University Community is drawn to the section of the University Calendar titled The Memorial University of Newfoundland Code, which articulates the University's commitment to maintaining the highest standards of academic integrity.

2 Research Units

2.1 Centre for Earth Resources Research (CERR)

Director
Hanchar, J.M., B.S. Memphis, M.S. Vanderbilt, Ph.D. Rensselaer Polytechnic Institute
2.1 Research Group
The Centre draws on the research expertise of faculty and research staff members in the Department of Earth Sciences as well as other specialists inside and external to the University. For a complete listing of faculty, see Earth Sciences entry.

2.1.2 Scope and Objectives
The CERR was established in 1983 to provide for the co-ordination and promotion of earth resources research and associated work related to the origin, discovery, development, exploitation, and environmental aspects of earth resources.

The Centre promotes, initiates, and co-ordinates research within the earth resources disciplines on the national and international scenes. Researchers interact, when appropriate, with the industrial and government sectors and introduce other organizations to the potential benefits of further research and development in earth resources.

The special facilities of the Centre complement the development of graduate and undergraduate programs in earth sciences and related disciplines at Memorial University of Newfoundland. A further function of the Centre is to contribute to the training of people competent in solving earth resources problems and to encourage personnel exchanges with industry and government.

The Alexander Murray Building houses the Centre, and has laboratories for teaching and basic and applied research.

2.1.3 Organization
The Centre is an integral part of the Department of Earth Sciences. The active research of faculty members contributes to programs in the Centre. Increasing collaboration is under way with government and industry in research projects that emphasize earth resources. The work of the Centre addresses problems and opportunities related to mineral resources, petroleum resources, exploration technology, environmental geoscience, and generic research.

The Centre works closely with other local, national, and international research institutes. CERR hosts the geoscience component of the University's Oil and Gas Development Partnership.

2.2 Ocean Sciences Centre (OSC)
Administration
Devereaux, J.; Field and Laboratory Services Supervisor
Fletcher, G.L., B.Sc. British Columbia, Ph.D. California; Professor Emeritus; Director, Ocean Sciences Centre
Nichols, D., B.A., M.M.S. Memorial; Research Marketing Manager
Wheeler, D.; Staff Administrative Specialist, Finance

Scientific Staff
Abrahams, M., B.Sc.(Hons.) Western, M.Sc. Queen's, Ph.D. Simon Fraser; Dean of Science
Debel, D.R., B.Sc. Bucknell University, U.S.A, Ph.D. University of Georgia, U.S.A.; Professor; Cross appointment with Department of Biology
Driedzic, W.R., B.Sc. York, M.Sc. Toronto, Ph.D. British Columbia; Professor; Tier I Canada Research Chair in Marine Bioscience; Cross appointments with Departments of Chemistry and Biochemistry
Gagnon, P., B.Sc., Ph.D. Laval University; Assistant Professor
Fleming, I.A., B.Sc. Queen's Univ., M.Sc. Simon Fraser Univ., Ph.D. Univ. of Toronto; Associate Professor
Gamper, A.K., B.Sc., M.Sc. Guelph, Ph.D. Dalhousie; Associate Professor; Cross appointment with Department of Biology
McGaw, I., B.Sc., Ph.D. University of Wales-Bangor (UK); Assistant Professor
Mercier, A., B.Sc. Université de Sherbrooke, M.Sc., Ph.D. Université du Québec à Rimouski; Assistant Professor
Parrish, C.C., B.Sc. Wales, Ph.D Dalhousie; Winner of the President's Award for Outstanding Research, 1995-1996; Professor
Rise, M., M.Sc. Boston College, U.S.A., Ph.D. University of Victoria; Assistant Professor; Tier II Canadian Research Chair in Marine Biotechnology
Rivkin, R.B., B.Sc., M.Sc. City College, New York, Ph.D. Rhode Island; Professor; Cross appointment with Department of Biology; University Research Professor, Awarded 2007
Schneider, D.C., B.Sc. Duke, Ph.D. SUNY, Stony Brook; Professor; Associate Dean (Research), Faculty of Science; Cross appointments with Departments of Biology and Psychology
Snellgrove, P.V.R., B.Sc. Memorial, M.Sc. McGill, Ph.D. Woods Hole; Associate Professor; Tier 2 Canada Research Chair in Boreal and Cold Ocean Systems; Cross appointment with Department of Chemistry; Joint appointment with Department of Biology
Thompson, R.J., B.Sc. Bristol, Ph.D. Leicester; Professor (Research); Cross appointment with Department of Biology
Wroblewski, J.S., B.Sc. Illinois, M.Sc., Ph.D. Florida State; Professor (Research); Cross appointment with Department of Biology

Professores Emeriti
Burton, D., B.Sc. Wales, Ph.D. London; Biology
Khan, R.A., B.SA, M.Sc., Ph.D., Toronto; Biology

Adjunct Professors
Cote, D., M.Sc. Wilfrid Laurier Univ., Ph.D. Univ. of Waterloo; Terra Nova National Park
DeBlos, E., B.Sc. Univ. of New Brunswick, Ph.D. McGill University; Senior Scientist, Jacques Whitford Ltd.
Dixon, B., B.Sc. Wilfrid Laurier Univ., M.Sc. Univ. of Guelph, Ph.D. Dalhousie Univ. of Waterloo
Ewart, K., B.Sc. Université de Moncton, Ph.D. Memorial; Research Scientist, Institute for Marine Biosciences, Halifax, N.S.
Hale, M., B.Sc., Ph.D. Flinders University; Senior Lecturer, University of Portsmouth
Mansour, Atef, B.Sc., M.Sc., Ph.D. Cario Univ.; Research Scientist, Dept. of Fisheries and Oceans
McKenzie, C., B.Sc., Ph.D. Texas University; Research Scientist, Department of Fisheries and Oceans
Morgan, J.M., B.Sc. Mount Alison, Ph.D. Queen's; Department of Fisheries and Oceans
O'Reilly, P., B.Sc., M.Sc. University of Alberta, Ph.D. Dalhousie University; Research Scientist, Department of Fisheries and Oceans, Nova Scotia
Pepin, P., B.Sc. McGill, Ph.D. Dalhousie; Northwest Atlantic Fisheries Centre, Department of Fisheries and Oceans
Rise, M., B.Sc., M.Sc. St. Francis Xavier, Ph.D. Victoria; Project Manager, Genome Atlantic, OSC
Trippel, E., B.Sc., M.Sc. University of Toronto, Ph.D. Guelph; Research Scientist, Department of Fisheries and Oceans, New Brunswick

Cross-Appointed Faculty
Dr. W. Montevettuci, Department of Psychology
Dr. F. Shahidi; Department of Biochemistry
Dr. H. Volfkoff; Department of Biology

Post-Doctoral Fellows
Lowen, B., B.Sc. University of Aberdeen, Scotland, B.Sc. University of Stirling, Scotland, Ph.D. Memorial
Mitchell, J., B.Sc., Queens, M.Sc., University of Ontario, Ph.D., Simon Fraser

Research Specialist
DuRand, M., Ph.D. Massachusetts

Research Assistants
Ings, D., M.Sc. Memorial
Jones, D., B.Sc. Saskatchewan
Short, C., B.Sc. Memorial

The Ocean Sciences Centre (OSC) provides scientists at Memorial University of Newfoundland and other organizations with first-rate facilities for research in cold ocean sciences. In addition, the OSC supports quality graduate education in a broad range of marine science and related disciplines. Located on the most eastern coast of Canada the Centre lends itself to the shore-based study of cold ocean processes, and sub-arctic and arctic fauna and flora. Current research foci are aquaculture, biological and chemical oceanography, and fundamental principles of behaviour, biochemistry, and physiology that underlie the first two themes. The OSC is a key player in AquaNet, Canada’s first federal Network of Centres of Excellence (NCE) devoted to aquaculture. The OSC is an AquaNet Core Facility, as well as its Administrative Centre.

Located at Logy Bay, 9.6 km from the main campus, the OSC has an excellent unpolluted sea water supply that is the lifeline of the centre. There are 35 laboratories (22 provided with running seawater) and facilities for microscopy, histochemistry, analytical chemistry, radioisotope counting, physiological work, and standard analyses for oceanography. Large holding areas permit scientists to maintain a variety of marine organisms for long periods at ambient and controlled water temperatures. The Seal Research Facility offers research opportunities on North America’s only population of captive harp seals. The Field Services Unit provides extensive resources for field studies including: year round SCUBA diving, small research vessels, a tank truck for the transportation of live specimens, and a wide-range of oceanographic and collecting equipment.

The Logy Bay complex includes machine, woodworking and electronics shops, computer resource personnel, and a multimedia classroom. Desktop computers are linked to the mainframe cluster on campus, with high-resolution printing and graphics, and an image analysis facility.

The Aquaculture Research and Development Facility provides state-of-the-art facilities designed to support research, training, pre-commercial production, and small-scale commercial trials, on alternative species for marine aquaculture. A critical component of the new facility is a sea water system designed to deliver high quality, temperature controlled, flow through and re-circulating water. There are areas for broodstock conditioning, hatchery and nursery operation, first-feeding, on-growing, and live food production. Under investigation are: Atlantic halibut, Atlantic cod, Atlantic salmon and smaller flounder species.

Research Themes
1. Aquaculture nutrition and production
2. Reproductive biology of finfish and molluscs
3. Development and behavioural ecology of larval and juvenile fish
4. Survival of marine organisms without oxygen
5. Antifreeze proteins and cold adaptation in fish
6. Biological production and the ecology of cold oceans
7. Transport and fate of lipids in cold ocean ecosystems
8. Physiology of feeding and digestion in marine invertebrates
9. Marine biotechnology
10. Fisheries oceanography
11. Quantitative biology and population interactions

3 Faculty Description

The Faculty of Science encompasses eight academic departments: Biochemistry, Biology, Chemistry, Computer Science, Earth Sciences, Mathematics and Statistics, Physics and Physical Oceanography, and Psychology. Each offers programs leading to either a general or honours degree. A number of specialized and joint (double major) programs are also offered, as well as Bachelor of Science degree programs delivered by the Departments of Geography and Economics. In addition to educational programs, research is a most important aspect of the Faculty of Science. As such, the Faculty is in a position to generate new knowledge by the pursuit of high quality research and to foster economic development through cooperative research and technology transfer with the private sector. The Faculty of Science is the scientific training ground for all undergraduates at the University. Memorial University of Newfoundland’s science graduates are in demand by science-based industries throughout the country. Our Faculty excels in research and in its commitment to effective teaching and delivery of quality educational programs.

Additional information regarding the Faculty of Science is available at www.mun.ca/science/aboutus/.

4 Joint Programs

Course descriptions are found at the end of the Faculty of Science section under Course Descriptions.

The following joint programs are offered by Departments in the Faculty of Science, and the regulations for each program are joint Departmental Regulations. For convenience of reference the joint programs are listed below in alphabetical sequence: Joint Honours, Joint Majors, and Joint Options.

4.1 Joint Honours

4.1.1 Applied Mathematics and Chemistry Joint Honours (B.Sc. Only)

See Regulations for the Honours Degree of Bachelor of Science. In addition, Chemistry 1050 and 1051 (or Chemistry 1010, 1011 and 1031), Mathematics 1000 and 1001, Physics 1050 (or 1020) and 1051, the following courses numbered 2000 or higher are required:

1. Chemistry 2210, 2300 or 2301, 2302, (or the former Chemistry 3301), 2400, 3401, 3100, 3211, 3303 (or the former Chemistry 3300), 3500, 4303 (or the former Chemistry 4302), 4304 (or the former Chemistry 4300) and a 3 credit hour Chemistry elective.
3. Physics 2055, 2056 or 2750, 2820, 3220, 3230.
4. either Applied Mathematics 419A/B or Chemistry 490A/B.

The following courses are recommended:

4.1.2 Applied Mathematics and Physics Joint Honours

The following courses are required:
1. English 1080 and English 1110 (or equivalent).
2. A computing course. Computer Science 1510 is recommended.
3. Six credit hours in a science other than Mathematics or Physics (if Computer Science is chosen then Computer Science 1510 may be counted as three of these hours).
5. At least one of Applied Mathematics 2130 or Pure Mathematics 2230.
6. Physics 1050 (or 1020), 1051, 2053, 2055, 2750 (or 2056), 2820, 3220, 3230, 3400, 3500, 3750.
7. Three additional credit hours chosen from courses numbered 3000 or higher that are offered by the Department of Physics and Physical Oceanography.
9. Physics 490A/B or Applied Mathematics 419A/B.
10. Twelve additional credit hours chosen from courses numbered 4000 or higher that are offered by the Department of Mathematics and Statistics or the Department of Physics and Physical Oceanography. At least 3 credit hours must be selected in each of Applied Mathematics and Physics.
11. A sufficient number of elective courses to bring the degree to a total of 120 credit hours.

The topic for the Honours project or thesis, the former Applied Mathematics 4199 or Physics 490A/B must be chosen with the prior approval of both departments.

4.1.3 Biochemistry and Cell Biology Joint Honours

Students must have at least an overall average of 65% in English 1080 and 1110 (or equivalent), Mathematics 1000 and 1001, Biology 1001 and 1002, Chemistry 1050 and 1051 (or equivalent), Physics 1050 and 1051 (or 1020, 1021 and 1051).

The following courses, including prerequisites where applicable, will be required.
1. Biochemistry 2101, 3105, 3106, 3107, 3108, either 4210 or 4211, 12 credit hours chosen from 4002, 4101, 4102, 4103, 4104, 4105, 4200, 4201, 4230-4249.
2. Biology 2060, 2250, 2600, 2900, 3050 and 9 credit hours chosen from 3500, 3530, 3620, 4000, 4200, 4241. In addition, further Biology courses at the 2000, 3000, or 4000 level must be selected by the student to make up a minimum of 42 credit hours in Biology including Biology 1001 and 1002 but not including Biology 499A or 499B.
3. Either Medicine 310A/B, or Biology 3401 plus one of Biology 3402, 4245 or 4404.
4. Chemistry 2300 or 2301, 2400, 2401, 3100; either 3410 or 3411.
5. Statistics 2550 or equivalent.
7. Other courses to complete the prescribed minimum of 135 credit hours in courses for the Joint Honours Degree.

Note: Students may count only one of the two courses, Biochemistry 4105 or Biology 4200, for credit in this program.

The topic of the Honours dissertation must be chosen with the approval of both Departments. A faculty member of either Department may act as supervisor.

Seventy-eight credit hours in Biology, Biochemistry and Chemistry courses beyond the first-year level from those listed in the program shall contribute to those in which a grade of “B” or an average of 75 or higher is required. Medicine 310A/B counts as Biochemistry for these seventy-eight credit hours.

4.1.4 Biochemistry and Chemistry Joint Honours

The following courses (or their equivalents) are required:
1. Chemistry 1050 and 1051 (or Chemistry 1010, 1011 and 1031) or their equivalents, Mathematics 1000 and 1001, Physics 1050 and 1051, 6 credit hours in first year English courses. Biology 1001 and 1002 are highly recommended.
3. Chemistry 2210, 2300 or 2301, 2302 (or the former 3301), 2400, 2401, 3100, 3211, 3303 (or the former Chemistry 3300), 3410, 3411, 3500, 4110, and 6 further credit hours in Chemistry courses at the 4000 level.
4. Biochemistry 2100, 2101, 3105, 3106, 3107, 3108, Medicine 310A/B, either Biochemistry 4210 or 4211, 9 credit hours chosen from Biochemistry 4002, 4101, 4102, 4103, 4104, 4105, 4200, 4201, 4220, 4230-4249.

Note: Only one of Biochemistry 4105, 4220 may be chosen.
5. Either Chemistry 490A/B or Biochemistry 499A/B.
6. Other courses to complete the prescribed minimum of 135 credit hours in courses for the Joint Honours Degree. Physics 2820 and/or Physics 2750 are recommended.

4.1.5 Biochemistry and Physics Joint Honours

The following courses are required:
1. English 1080 and 1110 (or equivalent), Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031), Mathematics 1000 and 1001, Physics 1050 and 1051 (or 1020, 1021 and 1051).
2. Chemistry 2400, 2401.
3. Chemistry 2300 or 2301, or Physics 2053.

5. Biochemistry 2100, 2101, 3105, 3106, 3107, 3108, Medicine 310A/B; plus 9 credit hours in courses to be selected from Biochemistry 4002, 4101, 4102, 4103, 4104, 4200, 4201, and 4230-4249; plus a 3 credit hour course to be selected from Biochemistry 4210 or 4211.

6. Physics 2055, 2750 or 2056, 2820, 3220, 3400, 3500, 3750, 3820, 3900, 4820; plus one 4000 level Physics course.

7. One course to be selected from Physics 3150, 3300, 3751, 4400. Physics 3751 is recommended.

8. Either Physics 499A/B or Biochemistry 499A/B.

9. Other courses to complete the prescribed minimum of 135 credit hours in courses for the Joint Honours degree.

4.1.6 Biochemistry and Psychology (Behavioural Neuroscience) Joint Honours

Note: Students completing this program cannot receive credit for Psychology 2920.

The following courses (or equivalent) are required to complete the 120 credit hours in courses required for the degree:

1. Chemistry 1050 and 1051 (or equivalent), Biology 1001 and 1002, Mathematics 1000 and 1001, Physics 1050 or 1020, and 1051, English 1080 and 1110.

2. Biochemistry 2100, 2101, 3105, 3106, 3107, 3108, Medicine 310A/B, either 4210 or 4211, 9 credit hours chosen from Biochemistry 4002, 4101, 4102, 4103, 4104, 4105, 4200, 4201, 4220, 4230-4249.

Note: Only one of 4105 and 4220 may be chosen.

3. Psychology 1000, 1001, 2520, 2570, 2910, 2911, 3800, 3801, 3900, two further courses in Psychology chosen from the following: 3050, 3100, 3250, 3350, 3450, 3620, 3650, 3750; two 4000 level courses in Psychology of which one must be a research experience course.

4. Either Biochemistry 499A/B or Psychology 499A/B.

5. Chemistry 2300 or 2301, 2401, 2404.

Notes:
1. In accordance with Clause 6. a. of the Regulations for the Honours Degree of Bachelor of Science, Honours candidates must obtain a grade of "B" or better, or an average of 75% or higher in all the required courses listed in Clauses 2., 3. and 4. above, except those at the 1000 level.
2. Students in first year intending to follow this program should note the regulations for admission to Major programs in Psychology and that the deadline for submission of a completed application form to the Psychology Department is June 1 for the Fall semester and October 1 for the Winter semester.

4.1.7 Biochemistry (Nutrition) and Psychology (Behavioural Neuroscience) Joint Honours

Note: Students completing this program cannot receive credit for Psychology 2920.

The following courses (or equivalent) are required:

1. Chemistry 1010 and 1011 (or 1050, 1051), Biology 1001 and 1002, Mathematics 1000, Physics 1020 or 1050, and 1021 (or 1051), English 1080 and 1110.

2. Biochemistry 2100, 2101, 3106, 3200, 3201, 4002, 4300, 4301, 4502, Medicine 310A/B; one course chosen from: Biochemistry 3105, 3108, 3202, 3402, 4101, 4103, 4104, 4105, 4200, 4201, 4210, 4211, 4220, 4230-4249, Biology 3050.

3. Psychology 1000, 1001, 2520, 2570, 2910, 2911, 3800, 3801, 3900; two further courses in Psychology chosen from the following: 3050, 3100, 3250, 3350, 3450, 3620, 3650, 3750; two 4000 level courses in Psychology of which one must be a research experience course.

4. Either Biochemistry 499A/B or Psychology 499A/B.

5. Chemistry 2400, 2401 or Chemistry 2440.

6. Other courses to complete at least the prescribed minimum of 120 credit hours in courses for the Joint Honours Degree.

Notes:
1. In accordance with Clause 6. a. of the Regulations for the Honours Degree of Bachelor of Science, Honours candidates must obtain a grade of "B" or better, or an average of 75% or higher in all the required courses listed in Clauses 2., 3. and 4. above, except those at the 1000 level.
2. Students in first year intending to follow this program should note the regulations as outlined for admission to Major programs in Psychology and that the deadline for submission of a completed application form to the Psychology Department is June 1 for the Fall semester and October 1 for the Winter semester.

4.1.8 Biology and Earth Sciences Joint Honours

The following courses, including prerequisites where applicable, will be required:

1. English 1080 and 1110 (or equivalent), Mathematics 1000 and 1001, Biology 1001 and 1002, Earth Sciences 1000 and 1002, Chemistry 1010 and 1011 (or 1050 and 1051), Physics 1020 and 1021 (or 1050 and 1051).

2. Chemistry 2440, Biochemistry 2101, Biochemistry 3106, one of Statistics 2550, 2560 or 2510.

3. Biology 2060, 2250, 2600, 2900, one of 3401, 3402, 4245 or 4404; plus Biology 3710, 3711, and 4505. In addition, further Biology courses at the 2000, 3000, or 4000 level must be selected by the student in consultation with the supervisor to make up a minimum of 42 credit hours in Biology not including Biology 499A or 499B.

4. Earth Sciences 2030, 2031, 2502, 2905; plus a minimum of 24 credit hours in other Earth Science courses from 2000 to 4000 level, at least 3 credit hours of which must be at 4000 level. Earth Sciences 2150, 2914, 2915, 2916, 2917, 4310, and 4950 cannot be used to fulfill this requirement. Career-related streams outlined in the departmental Student Handbook should be used as a guide to course selection so as to achieve a concentration in one facet of Earth Sciences.

5. An Honours dissertation (Biology 499A/B or Earth Sciences 499A/B). The topic of the Honours dissertation must be chosen with the approval of both Department Heads. A faculty member of either Department may act as supervisor.

6. Other courses to complete the prescribed minimum of 135 credit hours in courses for the Honours degree, with at least 84 credit hours in courses in Biology and Earth Sciences combined.

Any change in the program of study must have the prior approval of the Heads of the two Departments concerned.

4.1.9 Biology and Psychology Joint Honours

Note: Students completing this program cannot receive credit for Psychology 2920.

The following forty courses (or equivalent) are required:
Faculty of Science 2010-2011

1. Biology 1001, 1002, 2060, 2250, 2600, 2900; one of 3401, 3402, 4245, 4404; four Biology electives at the 2000, 3000 or 4000 level not including Biology 499A or 499B.

2. Psychology 1000, 1001, 2520, 2570, 2910, 2911, 3250, 3800 or 3801; 3900, 4910; one of the following: 3050, 3100, 3350, 3450, 3620, 3650; one further 4000 level Psychology research experience course.

3. Biology or Psychology 3750, 4701, 499A/B.

4. English 1080 and 1110; Mathematics 1000; Chemistry 1010 and 1011 (or 1050 and 1051), and 2440; Physics 1020 (or 1050) and 1021 (or 1051); Biochemistry 2101 and 3106.

5. Other courses, if necessary, to complete at least 120 credit hours of courses.

4.1.10 Biology and Psychology (Behavioural Neuroscience) Joint Honours

Note: Students completing this program cannot receive credit for Psychology 2920.

The following forty courses (or equivalent) are required:

1. Biology 1001, 1002, 2060, 2250, 2600, 2900; one of 3401, 3402, 4245, 4404; five Biology electives at the 2000, 3000 or 4000 level not including Biology 499A or 499B.

2. Psychology 1000, 1001, 2520, 2570, 2910, 2911, 3800, 3801, 3900; two further courses in Psychology chosen from the following: 3050, 3100, 3250, 3350, 3450, 3620, 3650, 3750; two 4000 level courses in Psychology of which one must be a research experience course.

3. Biology or Psychology 499A/B.

5. English 1080 and 1110; Mathematics 1000 and 1001; Physics 1020 or (1050) and 1021 or (1051); Chemistry 1010 and 1011 (or 1050 and 1051), and 2440 (or 2400 and 2401);

6. Other courses, if necessary, to complete at least 120 credit hours of courses.

Note: In accordance with Clause 6.a. of the Regulations for the Honours Degree of Bachelor of Science, Honours candidates must obtain a grade of "B" or better, or average of 75% or higher in all the required courses listed in Clauses 1, 2, 3, and 4 above, except those at the 1000 level.

4.1.11 Biology and Statistics Joint Honours (B.Sc. Only)

See Regulations for the Honours Degree of Bachelor of Science. Students shall complete the following requirements:

1. Mathematics 1000 and Mathematics 1001, Biology 1001 and 1002, English 1080 and 1110, Chemistry 1010 and 1011 (or 1050 and 1051), Physics 1020 and 1021, or equivalent;

2. Mathematics 2000, 2050, 2051, Statistics 2500 or 2510, 2501 or 2560 or the former 2511, 3520, 3521, 3530, and 4581;

3. nine further credit hours in Statistics courses (excluding those with second digit 0) including at least 6 credit hours in courses at the 4000 level or higher but not including Statistics 4599;

4. Chemistry 2440 (or 2400 and 2401). Biochemistry 2101 and 3106. Computer Science 2602;

5. Biology 2060, 2250, 2600, 2900, one of 3401, 3402, 4245, or 4404. In addition, further Biology courses at the 2000, 3000 or 4000 level must be selected by the student in consultation with the supervisor to make up a minimum of 42 credit hours in Biology but not including Biology 499A or 499B.

4.1.12 Chemistry and Earth Sciences Joint Honours

The following courses, including prerequisites, where applicable, will be required:

1. English 1080 and 1110 (or equivalents), Mathematics 1000 and 1001, Earth Sciences 1000 and 1002, Chemistry 1005 and 1051 (or 1010, 1011 and 1031) or their equivalents, Physics 1050 (or 1020 and 1021) and 1051.

2. Earth Sciences 2030, 2031, 2401, 2502, 2702, 2905, 3420, 3600; plus 6 additional credit hours in 3000-level Earth Sciences courses, and 9 additional credit hours in 4000-level Earth Sciences courses.

3. Chemistry 2210, 2301 (or 2300), 2302 (or the former 3301), 2400, 2401, 3100, 3500; plus 3211, 3303 (or the former 3300), 3410, and 3411 with the option of substituting up to 6 credit hours of these 3000-level courses with 4000-level Chemistry courses; and at least 3 additional credit hours in 4000-level Chemistry courses.

5. Biology 2120 (or Biology 1001 and 1002).

6. An Honours Dissertation (Earth Sciences 499A/B or Chemistry 490A/B). The topic of the Honours Dissertation must have the prior approval of the Heads of the two Departments. A faculty member of either Department may act as supervisor.

7. Other courses to complete the prescribed minimum of 120 credit hours.

Any change in the program of study must have the prior approval of the Heads of the two Departments concerned.

4.1.13 Chemistry and Physics Joint Honours

The following courses are prescribed:

2. Physics 1050 (or 1020 and 1021) and 1051.

3. A minimum of 45 additional credit hours in Physics courses, which shall include Physics 2055, 2750 or 2056, 2820, 3220, 3230, 3500, 3750, 3820, 3900, 4820 and 3 credit hours in a Physics course numbered 3000 or higher and 12 credit hours in Physics courses numbered 4000 or higher.

4. Physics 3810 or Applied Mathematics/Pure Mathematics 3202.

5. Chemistry 1050 and 1051 (or Chemistry 1010, 1011 and 1031), 2210, 2300 or 2301, 2302 (or the former Chemistry 3301), 2400, 2401 and 27 credit hours in Chemistry courses numbered 3000 or higher including Chemistry 3100, 3211, 3303 (or the former Chemistry 3300), 3500, 4303 (or the former Chemistry 4302) and 4304 (or the former Chemistry 4300).

6. The courses selected in accordance with 3.and 5. above shall include Chemistry 490A/B or Physics 490A/B.

The topic for the Honours thesis, Chemistry 490A/B or Physics 490A/B, must be chosen with the prior approval of both Departments.
4.1.14 Computer Science and Geography Joint Honours (B.Sc. Only)

1. **Computer Science Requirements**
   
   See Regulations for the Honours Degree of Bachelor of Science.
   
   Forty-eight credit hours in Computer Science courses are required for the Joint Honours:
   
   a. 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4751, 4770.
   
   b. Six additional credit hours in courses at the 4000 level not including 4780.
   
   c. Three additional credit hours in courses at the 3000 level or beyond.

2. **Geography Requirements**
   
   Forty-eight credit hours in Geography courses are required for the Joint Honours: 1050, 2001, 2102, 2195, 2226, 2302, 2425, 3202, 3222, 3226, 3250, 3260, 3303, 4202, 4250, 4261, and the former 4291.

3. **Additional Requirements**
   
   
   b. An Honours Dissertation (either Computer Science 4780 or Geography 4999). The topic for dissertation must be chosen with the prior approval of the Heads of both Departments.

4.1.15 Computer Science and Physics Joint Honours

The following courses are prescribed:

1. Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031).

2. a. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3731, 3754, 4770.
   
   b. Nine additional credit hours in Computer Science courses numbered 3000 or higher, including at least 6 credit hours in courses numbered 4000 or higher.

3. a. Physics 1050 and 1051, or Physics 1020, 1021 and 1051.
   
   b. Physics 2053, 2055, 2750 or 2056, 2820, 3220, 3400, 3500, 3750, 3820, 4500, 4820 and 3230 or 3900.

4. Physics 490A/B or Computer Science 4780.

5. Physics 3810 or Applied Mathematics/Pure Mathematics 3202.

   

The topic for the Honours project or thesis, Computer Science 4780 or Physics 490A/B, must be chosen with the prior approval of both Departments.

4.1.16 Computer Science and Pure Mathematics Joint Honours (B.Sc. Only)

See Regulations for the Honours Degree of Bachelor of Science. Students shall complete the following:

At least 51 credit hours in Computer Science courses are required including the following:

1. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4770.

2. Excluding 4780, 15 additional credit hours from courses numbered 3000 or higher, at least 9 credit hours of which must be in courses at the 4000 level.

The following courses in Mathematics and Statistics are required:

2. Either Mathematics 4000 or 4001;

3. Excluding Pure Mathematics 4399, 15 additional credit hours in courses offered by the Department of Mathematics and Statistics numbered 3000 or higher including at least 9 credit hours from courses numbered 4000 or higher and at least 9 credit hours in Pure Mathematics courses;

4. An Honours Dissertation in one of the departments, with the topic chosen in consultation with both departments.

Note: There is an Undergraduate Advisor in each Department. These advisors should be consulted on all academic matters.

4.1.17 Computer Science and Statistics Joint Honours (B.Sc. Only)

See Regulations for the Honours Degree of Bachelor of Science. In addition to Mathematics 1000 and 1001 the following courses numbered 2000 or higher are required:

2. Twenty-four further credit hours in Statistics courses (excluding those with second digit 0) including at least 12 credit hours in courses numbered 4000 or higher, but not including Statistics 4599 and 4581;

3. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4734, 4770.

4. Six additional credit hours in Computer Science courses at the 4000 level, not including 4780.

5. Either Computer Science 4780 or Statistics 4599.

4.1.18 Earth Sciences and Geography Joint Honours (B.Sc. Only)

The following courses will be required. A few prerequisites are not met by this list of courses, and students are advised to obtain advice from instructors in such cases to be sure that they are prepared for course material. Both departmental Heads can advise students on a workable sequencing of courses to complete the degree in a timely manner, and students should view a student handbook that describes thematic streams within the program and offers specific guidance about course selection.

1. English 1080 or equivalent, English 1110 or equivalent, Geography 1050, Mathematics 1000 and 1001, Earth Sciences 1000 and 1002, one of Chemistry 1010 or 1050 (or equivalent) and one of Chemistry 1011 or 1051 (or equivalent), Physics 1050 and 1051, or Physics 1020 and 1021.
2. Geography 2001 or 2302, and Geography 2102, 2195, 2226, 2425 and 3226, Earth Sciences 2401 or 2502, and Earth Sciences 2030, 2031, 2702 and 2905.
3. Mathematics 2000 or Statistics 2510 or Geography 3222, Biology 1001 and 1002, or Biology 2120 or Physics 2055.
4. Either Earth Sciences 499A and 499B, or Geography 4990 and Geography 4999.
5. At least an additional 40 credit hours from Earth Sciences and Geography, with a minimum of 16 credit hours from Earth Sciences and 18 credit hours from Geography; and a minimum of 9 credit hours at the 4000-level in each discipline. Earth Sciences 2150, 2914, 2915, 2916, 4310, and 4950 cannot be used to fulfill this requirement. Geography 2105, 2290, 2405, 2460 and 2495 cannot be used to fulfill this requirement.
6. Additional credit hours selected to conform to the Regulations for the Honours Degree of Bachelor of Science so as to achieve a total of 120 credit hours.

Notes:
1. The topic of the Honours dissertation must be chosen with the approval of both Departments. A faculty member of either Department may act as supervisor.
2. Any change in the program of study must have the prior approval of the Heads of both Departments concerned.
3. The number of specified courses means that English 1110 will be taken normally in the second or third year of the program.
4. Students who do not satisfy the Regulations for the Honours Degree of Bachelor of Science - Academic Standing, but who successfully complete all the courses, with the exception of the Honours dissertation, and who satisfy all other requirements for the Bachelor of Science, will be eligible to receive a Bachelor of Science with a joint major in Geography and Earth Science.

4.1.19 Earth Sciences and Physics Joint Honours
This program was formerly in the Earth Sciences section of the calendar as an Honours B.Sc. Degree in Geophysics. The following courses will be required:
1. English 1080 and 1110 (or equivalent), Mathematics 1000 and 1001, Earth Sciences 1000 and 1002, Chemistry 1010 and 1011 (or equivalent), Physics 1050 and 1051 (or Physics 1020, 1021 and 1051).
2. Earth Sciences 2030, 2031, 2401, 2502, 2905, 3170, 3172, 3420, 4105, 4171, 4173, 4179, 499A/B.
3. Physics 2055, 2750 or 2056, 2820, 3220, 3230, 3500, 3820, 4820; plus 9 other credit hours in Physics courses at 3000 level or higher.
4. One of Physics 3810 or Applied Mathematics/Pure Mathematics 3202.
6. Other courses to complete at least a minimum of 120 credit hours.

Any change in the program of study must have the prior approval of the Heads of the two Departments concerned.

4.1.20 Geophysics and Physical Oceanography Joint Honours
The program requires the following courses:
1. English 1080 and 1110 (or equivalent), Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031), Mathematics 1000 and 1001, Earth Sciences 1000 and 1002, Physics 1050 and 1051 (or Physics 1020, 1021 and 1051).
2. Earth Sciences 2905, 3170, 3172, 4105, 4171, 4173, 4179 and 10 credit hours at the 2000 level or higher with at least 3 credit hours at the 3000 level.
3. Physics 2053, 2055, 2820, 3220, 3300, 3500, 3820, 4205, 4300, 4330, 4820 plus one of Physics 3600, 3150, 3400, 3550 or 3900.
5. Either Earth Sciences 499A and 499B or Physics 490A and 490B.
6. Other courses to complete the prescribed minimum of 120 credit hours.

4.1.21 Pure Mathematics and Statistics Joint Honours
See Regulations for the Honours Degree of Bachelor of Science. In addition to Mathematics 1000 and 1001 the following courses numbered 2000 or higher are required:
2. A computing course early in the program is required. Computer Science 1510 is highly recommended;
3. either Pure Mathematics 4399 or Statistics 4599;
4. one of: Pure Mathematics 3330 or 3340;
5. Twenty-one further credit hours in Pure Mathematics and/or Statistics courses numbered 3000 or higher of which at least 12 credit hours must be from courses numbered 4000 or higher excluding Statistics 4581.

4.2 Joint Majors

4.2.1 Applied Mathematics and Computer Science Joint Major (B.Sc. Only)
The following courses are required
1. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4770, plus 6 further credit hours in Computer Science courses numbered 3000 or higher.
In addition, Statistics 2510 is highly recommended.

4.2.2 Applied Mathematics and Economics Joint Major (B.Sc. Only)
2. Either Applied Mathematics 3132 and 4131 or 3161 and 4160.
3. A computing course early in the program is required. Computer Science 1510 is highly recommended.
5. Eighteen further credit hours chosen from among the various Economics courses in consultation with the Head of the Department or delegate, including at least 9 credit hours at the 4000 level.

4.2.3 Applied Mathematics and Physics Joint Major (B.Sc. Only)
Required course for this degree are:
1. English 1080 and English 1110 (or equivalent).
2. A computing course. Computer Science 1510 is recommended.
3. Six credit hours in science other than Mathematics or Physics (if Computer Science is chosen then Computer Science 1510 may be counted as 3 of these hours).
5. At least one of Applied Mathematics 2130 or Pure Mathematics 2230.
6. Physics 1050 (or 1020), 1051, 2053, 2055, 2750 (or 2056), 2820, 3220, 3400, 3500, 3750.
7. Applied Mathematics 3161 or Physics 3820.
8. At least 15 additional credit hours chosen from Applied Mathematics and Physics courses numbered 3000 or above. At least 3 hours are required from Applied Mathematics and 6 hours are required from Physics.
9. A writing course. Any one of Applied Mathematics 2130, Physics 3900, the former Applied Mathematics 4199, or Physics 490A/B is acceptable.
The last requirement does not have to be met independently of the other regulations. For example, it can be satisfied either by choosing Applied Mathematics 2150 from clause 5. above or choosing Physics 3900 as a 3000+ elective in clause 6. above.

4.2.4 Computer Science and Economics Joint Major (B.Sc. Only)
1. Computer Science Requirements
Forty-two credit hours in Computer Science courses are required: 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3731, 3733, 3754, and 4770.
2. Economics requirements
A total of 42 credit hours in Economics courses are required: 2010, 2020, 2550, 3000, 3001, 3010, and 6 credit hours from either 3550 and 3551, or 4550 and 4551 are obligatory.
The remaining 18 credit hours shall be chosen from among the various Economics courses in consultation with the Head of the Department or delegate, and will include at least 9 credit hours in courses at the 4000 level.

4.2.5 Computer Science and Geography Joint Major (B.Sc. Only)
1. Computer Science Requirements
Thirty-nine credit hours in Computer Science courses are required: 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4751, and 4770.
2. Geography Requirements
Thirty-nine credit hours in Geography courses are required: 1050, 2001, 2102, 2195, 2302, 2425, 3202, 3222, 3250, 3260, 4202, 4250, 4261.

4.2.6 Computer Science and Physics Joint Major
1. Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031).
2. Thirty-nine credit hours in Computer Science are required for the Joint Major: 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3731, 3733, 3754, and 4770.
3. Physics 1050 and 1051 (or 1020, 1021 and 1051) plus at least 30 additional credit hours in Physics including 2053, 2055, 2750 (or 2056), 2820, 3220, 3400, 3500, 3550, 3750, 3900.
c. Physics 3810 or Applied Mathematics/Pure Mathematics 3202.

4.2.7 Computer Science and Pure Mathematics Joint Major (B.Sc. Only)
In addition to Mathematics 1000, 1001, and Computer Science 1710, the following courses numbered 2000 or higher are required:
1. 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4770.
2. Six additional credit hours in Computer Science courses numbered 3000 or higher.
4. Nine additional credit hours in courses numbered 3000 or higher offered by the Department of Mathematics and Statistics.

4.2.8 Computer Science and Statistics Joint Major (B.Sc. Only)
In addition to Mathematics 1000, 1001, and Computer Science 1710, the following courses numbered 2000 or higher are required:
1. 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4734, 4770.
2. Statistics 2510 and 2560.
4. nine further credit hours in Statistics courses numbered 3000 or higher including at least a 3 credit hour course numbered 4000 or higher excluding Statistics 4581.

4.2.9 Earth Sciences and Physics Joint Major
This program was formerly in the Earth Sciences section of the calendar as a General B.Sc. Degree in Geophysics. The following courses will be required:
1. English 1080 and 1110 (or equivalent), Mathematics 1000 and 1001, Earth Sciences 1000 and 1002, Chemistry 1010 and 1011 (or equivalent), Physics 1050 and 1051 (or Physics 1020, 1021 and 1051).
2. Earth Sciences 2030, 2031, 2401, 2502, 2905, 3170, 3172, 3420; plus a 3 credit hour course in Earth Sciences 4100 series.
3. at least 30 credit hours in Physics courses at the 2000 level or higher, including Physics 2055, 2056 or 2750, 2820, 3220, 3500.
4. One of Physics 3810 or Applied Mathematics/Pure Mathematics 3202.
6. Other courses to complete at least a minimum requirement of 120 credit hours in courses for the General Degree. Any change in the program of study must have the prior approval of the Heads of the two Departments concerned.

4.2.10 Economics and Pure Mathematics Joint Major (B.Sc. Only)
2. A computing course early in the program is required. Computer Science 1510 is highly recommended.
3. Economics: 2010, 2020, 2550, 3000, 3001, 3010, and 6 credit hours from either 3550 and 3551, or 4550 and 4551.
4. Eighteen further credit hours chosen from among the various Economics courses in consultation with the Head of the Department or delegate, including at least 9 credit hours at the 4000 level.

4.2.11 Economics and Statistics Joint Major (B.Sc. Only)
2. Six further credit hours in Statistics courses numbered 3000 or higher, at least 3 credit hours of which must be numbered 4000 or higher, excluding Statistics 3521 and 4581.
4. Eighteen further credit hours chosen from among the various Economics courses in consultation with the Head of the Department or delegate, including at least 9 credit hours at the 4000 level.

4.2.12 Economics (Co-operative) and Statistics Joint Major (B.Sc. Only)
The Joint Major in Economics (Co-operative) and Statistics Option is available to full-time Economics and Statistics majors (B. Sc.) only. The program is available under the Economics Co-operative Education Option (ECEO).
The ECEO provides an excellent mutual opportunity for students and employers. Qualified students will obtain rewarding employment experience in fields related to Economics for several months of continuous duration. Students will learn valuable practical skills in an employment situation during their course of study. Furthermore, paid employment will help to defray the cost of their education. The timing of the Work Terms and the structure of the ECEO generally are such that employers stand to gain from the acquired employable skills of economists and statisticians in training. The objectives of the Work Term component of the ECEO are embodied in the Work Term descriptions below. The descriptions serve to guide the student and the employer toward achieving these objectives.

1. Admission Requirements
a. Admission is competitive and selective. Therefore, prospective students are encouraged to consider an alternate degree program in the event that they are not accepted into the Joint Co-operative program.
b. Applicants should note that it is possible to enter Term 1 only in the Fall semester commencing in September of each academic year. Application forms are available in the Department of Economics and the Department of Mathematics and Statistics. The deadline for applications for admission to Term 1 is March 1.
c. The primary criterion used in reaching decisions on applications for admission is overall academic achievement. Students with weak overall academic records are unlikely to be admitted.
d. To be eligible for admission to Term 1 an applicant must have successfully completed a minimum of 30 credit hours with an overall average of at least 65% as follows: All applicants must have completed Economics 2010 and 2020; at least 6 credit hours in English; Mathematics 1000 and 1001; and 12 credit hours chosen from courses in the Faculties of Arts or Science.
It is recommended that students complete English 1110. Critical Reading and Writing II (Context, Substance, Style) as one of these English courses.
e. Students may apply for admission to Advanced Standing.
f. Transfer students from other universities will be placed in that term of the program judged to be appropriate considering equivalent credits, as determined by the Departments.

2. Program of Study
a. Promotion from each of Terms 1 through 6 requires a passing grade in all specified required courses and an overall average of at least 60% in all courses including electives. A student who fails a required course or fails to maintain an overall average of 60% will not be promoted to the next term and will be required to withdraw from the program. The student in question may apply for readmission in a subsequent year after passing the specified required course(s) previously failed, or re-establishing the 60% average.
b. In addition to the 30 credit hours required for admission, students are required to complete the six academic terms in the ECEO program for a total of 120 credit hours. Students must complete three Work Terms which follow Academic Terms 2, 4, and 5.
c. Courses shall normally be taken in academic terms or "blocks" in the sequenced course load and order set out in the Academic Course Program - Economics (Co-operative) and Statistics Joint Major (B.Sc. Only) Table. Unspecified credits may be used to fulfill elective requirements only.
3. Work Term Placement
See Regulations in Economics for the Major in Economics (Co-operative), in the Faculty of Arts section of the Calendar.

4. Registration and Evaluation of Performance
See Regulations in Economics for the Major in Economics (Co-operative), in the Faculty of Arts section of the Calendar.

### Notes:
1. Another 1000-level Computer Science course may be substituted for Computer Science 1700 with the Heads’ approvals.
2. Elective courses should be chosen with reference to the Regulations for the General Degree of Bachelor of Science, since courses specified for admission to and completion of the program only partially satisfy these regulations. In particular note that in addition to the 78 credit hours (26 courses) in Science subjects required, at least 3 credit hours in a Science subject other than Mathematics/Statistics, Economics and Computer Science must be completed.

### 4.3 Option Programs

#### 4.3.1 Physics and Chemistry Option Programs
Students who follow the five-year Physics/Chemistry Joint Honours Program of courses outlined above either as Honours students or otherwise and who satisfy all relevant course regulations except those on Academic Standing for the Honours Degree of Bachelor of Science shall receive on their University records a notation that they followed the “Physics/Chemistry” Option Programs.

Students who intend to follow a joint degree program are strongly recommended to consult the Head of the Department or delegate at their earliest opportunity to ensure proper planning of their course sequence.

### 5 Degree Regulations

Students must meet all regulations of the Faculty of Science in addition to those stated in the general regulations. For information concerning fees and charges, admission/readmission to the University, and general academic regulations (undergraduate), refer to **UNIVERSITY REGULATIONS**.

#### 5.1 Admission to the Department of Subject of Major

Admission to certain major programs within the Faculty is limited and competitive.

Admission to all major programs within the Faculty is upon formal application to the department of the subject of major after completion of the admission requirements.

Unless otherwise indicated by the Departmental Admission Regulations as published in the University Calendar under departmental regulations, students upon formal application by **Change of Academic Program Form**, are normally admitted to the department of major program upon successful completion of 30 credit hours which must include:

1. 6 credit hours in English courses
2. 6 credit hours in Mathematics courses
3. 6 credit hours in courses from each of two Sciences other than Mathematics

Students seeking admission to departments with Departmental Admission Regulations as indicated above must apply for admission on the appropriate Departmental Application for Admission Form upon completion of the specified admission requirements.
5.2 Limited Enrolment Courses

Certain course offerings in the Faculty of Science will be identified as being Limited Enrolment Courses and will be clearly identified as such in the University Timetable. Students who have registered for a Limited Enrolment Course must confirm their registration either (1) by attending at least one of the first three hours of lecture in the course and the first meeting of any laboratory section of the course; or (2) by notifying the department in writing within the first five university working days of the semester. Students who do not confirm their registration may be dropped from the course on the recommendation of the Head of Department.

5.3 Regulations to Govern Supplementary Examinations in the Departments of Biochemistry, Computer Science, Mathematics and Statistics, and Physics and Physical Oceanography

1. Supplementary examinations will be allowed in certain of the Biochemistry, Computer Science, and Physics and Physical Oceanography courses, and all Mathematics and Statistics courses which have written final examinations. In each course, students will be informed as to the possibility of a supplementary examination during the first week of classes. This information will be provided in writing, as part of the evaluation scheme for the course.

2. Supplementary examinations will be similar in length and degree of difficulty as the original final examination.

3. Students who wish to write supplementary examinations must apply in writing to the department within one week of release of grades.

4. A student who has clear or conditional standing may write a supplementary examination in a course if the final grade obtained is 45-49F and if his or her term mark is at least 50%.

5. In order to pass the course, the student, must pass the supplementary examination. If the student passes the supplementary examination, then a new grade will be calculated using the same weighting scheme as used in the course, but with the result of the supplementary examination replacing that of the original final examination. Any additional course requirements, including a requirement to pass the laboratory component of a course, will continue to apply.

6. If the new course grade is higher than the original, it will replace the original grade on the student's transcript, subject to the condition that the final mark will not exceed the student's term mark. The student's transcript will indicate that the course result was earned as the result of a supplementary examination.

7. Supplementary examinations will be written no later than the first week of the semester immediately following the one in which the course was failed. Normally they will coincide with the writing of deferred examinations. Grades for supplementary examinations will be submitted to the Office of the Registrar within one week following the commencement of classes for that semester.

8. A student may write a supplementary examination for any one registration in a course only once; if the course result following the supplementary examination is a fail then the course must be repeated in order to obtain credit.

5.4 Regulations for the General Degree of Bachelor of Science

1. For the General Degree of Bachelor of Science a candidate will be required to complete, subject to the following Regulations, 120 credit hours applicable to the degree which shall include:
   a. Six credit hours in English courses
   b. Six credit hours in Mathematics courses
   c. Six credit hours in courses from each of two Sciences other than Mathematics
   2. a. Courses shall be chosen so that a candidate shall have completed an approved concentration of courses in one subject to be known as the candidate's Major. In selecting courses in their Major, candidates must comply with the Departmental Regulations approved by the Senate and printed in the Calendar. The Departmental Regulations shall require not fewer than 36 nor more than 45 credit hours in courses from the subject of the Major (including the courses in that subject completed at the first year level). (See also Notes 1. and 2.).
   b. The subject of the candidate's major shall be that declared by the candidate on the appropriate admission form and approved by the department at the time of admission.
   c. The 36 or more credit hours in courses from one subject referred to in a. above, may be chosen from the following subjects, and may include courses in that subject which were completed at first-year level: Biology (see Note 4.), Biochemistry (see Note 6.), Chemistry, Computer Science, Earth Sciences, Economics, Geography, Mathematics (except the former 1150 and 1151) and Statistics, Physics, Psychology.
   d. A candidate may change the subject of the Major during any Regular Registration Period provided he or she has first applied for and received acceptance by the department to which application is being made.
   e. In those Departments which offer programs leading to both a degree of Bachelor of Arts and a degree of Bachelor of Science, students are free to choose the degree program they wish to follow and may change from one to the other; however, they may not obtain both degrees in the same Major subject at this University.
   3. Further courses may be chosen from any of the subjects listed in Clause 2. above, or from other courses approved by the Committee on Undergraduate Studies of the Faculty of Science (see Note 5.), provided that, of the 120 credit hours required:
      a. candidate shall have completed at least 78 credit hours in courses from the subjects listed in Clause 2. above, including the Major courses and the courses required for admission; See Notes 3. and 5.
      b. there shall be not fewer than five subjects in which a candidate shall have completed courses. At least four of these subjects shall be chosen from the subjects listed in Clause 2. above. In the case of unspecified transfer credits awarded in a subject area not taught at Memorial University of Newfoundland any number of such transfer credits in the aggregate shall count as one subject area.
      c. not more than 15 unspecified transfer credit hours awarded in a subject area not taught at Memorial University of Newfoundland shall be used to satisfy the requirements of the degree.
   4. Before a candidate registers, the Head of the Department of his or her Major, or delegate, shall approve a candidate's program which is in accordance with the above regulations. The Head of the Department or delegate shall advise each candidate of programs suitable for his or her particular needs.
   5. To obtain a general degree of Bachelor of Science a candidate shall have:
      a. satisfied the conditions of UNIVERSITY REGULATIONS - General Academic Regulations (Undergraduate), Graduation - Application for Graduation - Degrees, Diplomas and Certificates;
b. obtained an average of at least 2.0 points per credit hour in the 78 credit hours in Science required for the degree;
c. obtained an average of at least 2.0 points per credit hour in the minimum number of credit hours in the major subject (or, in the case of joint majors, subjects) required for the major program (or, in the case of joint majors, programs).

6. Where a student satisfies the separate departmental regulations for a major in two or more subjects for which a specific joint program does not exist, such subjects shall be recognized as the major subjects for the general degree of Bachelor of Science.

7. A candidate may complete a minor of at least 24 credit hours in courses from a subject area other than that of the Major chosen from Clause 2. c. above or from minors available in the Faculty of Arts, the Faculty of Business Administration, and the School of Music. (It should be noted that because of departmental regulations for the Major, not every candidate may be able to fit a minor into his or her 120 credit hour program).

a. The subject of the candidate's minor shall be that declared by the candidate on the Change of Academic Program Form which must then be signed by the Head of the Department of the Minor.
b. A candidate must follow the departmental regulations for the Minor as set forth in the appropriate section of the Calendar.
c. The Head of the Department of the Minor will advise the candidate on the selection of courses in the Minor.
d. Students who have taken courses appropriate to their Minor at another university are required to complete at least 6 credit hours in courses from that subject at this University. These courses must be chosen in consultation with the Head of the Department of the Minor program.
e. A candidate must obtain a grade point average of at least 2.0 in the credit hours prescribed for the minor program.

Notes: 1. Departmental regulations are not intended to debar students from taking more than the required courses in the subject of their Major.
2. Students who have taken courses in the subject of their Major at another university are required to complete at least 12 credit hours in courses from that subject at this University.
3. The former Science 2010/2011 may be used to fulfill in part the requirement of 78 credit hours in Science.
4. Biology 2120 may not be used for credit by Biology Majors.
5. When Science course equivalents have been established by Department Heads for Engineering courses, credit may not be obtained for both the Engineering course and the established equivalent course offered by the Faculty of Science.
6. In the case of Biochemistry the courses for the Biochemistry program shall include Chemistry 2400 and 2401.

5.5 Regulations for the Honours Degree of Bachelor of Science

A program is offered leading to the Honours Degree of Bachelor of Science. An Honours degree offers greater specialization in a given field of knowledge than a General degree, and requires higher than average academic achievement. Possession of this degree will be of great advantage to all students planning more advanced work in their chosen field. In many cases, an Honours degree is a prerequisite for admission to a graduate program.

1. Admission and Registration

a. Declaration of Intent: A candidate for an Honours degree shall declare in writing his (her) intention to pursue an Honours program and to obtain an Honours degree in a specified subject or subjects. Such declaration shall be submitted to his (her) Department(s) of specialization and to the Registrar not earlier than the beginning of his (her) fifth semester, or the equivalent, at University, and not later than the final date set for the application for a degree. A candidate for an Honours degree must have completed all courses listed under Admission to the Department of Subject of Major before declaring his (her) intention to pursue an Honours degree, regardless of whether these courses had been completed at the time of admission to his (her) Department of specialization.

Note: An otherwise qualified student who fails to declare his (her) intention to obtain an Honours degree on or before the last day of the period outlined above shall be awarded a General degree even if he (she) fulfills all other requirements for an Honours degree. The University cannot undertake to notify him (her) that he (she) may be eligible for an Honours degree.

b. At the beginning of each registration period the Head(s), or delegate(s), of the Department(s) in which a candidate is taking Honours, shall approve a candidate's program. The Head(s) of Department(s), or delegate(s), shall advise each candidate of programs suitable for his or her particular needs.

c. Students who have been awarded a Bachelor of Science (General) degree may convert it to a Bachelor of Science (Honours) degree by declaring their intention and by fulfilling the requirements for the Honours degree as outlined in these regulations.

d. To graduate, a candidate for an Honours degree must have completed all courses listed under Admission to the Department of Subject of Major in addition to those courses required by individual departmental regulations.

2. Course Requirements

a. i. For the Honours Degree of Bachelor of Science with a single subject major a candidate will be required to have completed 120 prescribed credit hours in courses. For the Joint Honours Degree of Bachelor of Science a candidate will be required to have completed either 120 or 135 credit hours as prescribed by the specific program. In either case, those courses must include the courses specified in Clause 1 of the Regulations for the General Degree of Bachelor of Science.

ii. Clause 2.a. i. notwithstanding, certain Departmental regulations preclude the possibility of completing a single subject Honours degree in 120 credit hours and may require the completion of 123, 126 or 129 credit hours in courses. (See Note below). In such cases all courses required to satisfy requirements of the degree will be used to determine Academic Standing 6. b. below.

Note: The requirements for an Honours Degree of Bachelor of Science cannot be completed in 120 credit hours if any of the following three statements is true: (i) the student is a major in Chemistry, or Physics and has completed the former Mathematics 1080; (ii) the student is a major in Chemistry or Physics and has completed the former Chemistry 1400; (iii) the student is a candidate for the Honours B.Sc. degree in Chemistry or Physics and has completed Physics 1021. Such students will only meet the degree requirements after completing 123, 126 or 129 credit hours in courses.

b. Courses shall be chosen so that a candidate shall have completed:

Either, (i) at least 60 credit hours from courses in one of the following subjects, including the courses in that subject completed at the first year level: Biology, Biochemistry, Chemistry, Computer Science (See Note 2.), Earth Sciences, Economics, Geography, Mathematics and Statistics, Physics and Psychology.

Notes: 1. For options in the Biochemistry, Dietetics and Nutrition programs the courses shall be those specified in the respective programs.
2. For the Behavioural Neuroscience Program, the courses shall be those specified in the program.
3. For the Environmental Physics Program, the courses shall be those specified in the program.

or, (ii) at least 84 credit hours in courses from two subjects listed in I. above, including the courses in these subjects completed at the first year level, with no fewer than 36 credit hours in either subject approved by the Committee on Undergraduate Studies of the Faculty of Science on the recommendation of the respective Heads of Departments.

or, (iii) in special circumstances, a program of at least 90 credit hours in courses from two or more subjects, including the
courses in these subjects completed at the first year level, one of which need not be taken from those listed in I. above, as recommended by the Heads of the Departments concerned and approved by the Committee on Undergraduate Studies of the Faculty of Science.

c. Further courses may be chosen from any of the subjects listed in Clause 2. b. above, or from other courses recognized for this purpose by the Committee on Undergraduate Studies of the Faculty of Science (see Note 5 of the Bachelor of Science General Degree) provided that, of the 120 or more credit hours required:
   i. a candidate shall have completed at least 90 credit hours in courses from the subjects listed in Clause 2. b. above, including those completed at the first-year level, and
   ii. there shall be no fewer than four subjects in which a candidate shall have completed courses. In the case of unspecified transfer credits awarded in a subject area not taught at Memorial University of Newfoundland, any number of such transfer credits in the aggregate shall count as one subject area.
   iii. Not more than 15 unspecified transfer credit hours in courses awarded from a subject area not taught at Memorial University of Newfoundland shall be used to satisfy the requirements of the degree.

3. Comprehensive Examination and Dissertation
   a. In addition to the regular examinations, a candidate in an Honours program shall pass a general comprehensive examination in his (her) Major subject or subjects. Alternatively, a candidate may be required to submit a dissertation, which at the discretion of the Head(s) of the Department(s) of specialization may be followed by an oral examination thereon.
   b. If a candidate is required to submit a dissertation, such dissertation must be submitted to the University Library before the degree is conferred. All Honours dissertations in the University Library shall be available for unrestricted consultation by students and faculty except under very exceptional circumstances which must be approved by the Committee on Undergraduate Studies. Copyright remains with the author. A signed release form must accompany an essay or a dissertation when it is submitted to the University Library.
   c. The deadline for the submission of Honours dissertations shall be no later than three weeks before the end of the final semester of the candidate's program.
   d. The Honours dissertation shall be equivalent to either a 3 credit hour course or a 6 credit hour linked course as specified in the course offerings of each Department.

4. Departmental Regulations
   Candidates for Honours Degrees shall also comply with such additional requirements of the appropriate Department(s) as are approved by the Senate and printed in the Calendar.

5. Residence Requirements
   a. To qualify for an Honours Degree in Science, a candidate shall attend a recognized university or an equivalent institution for at least seven semesters as a full-time student. Honours candidates transferring credits to Memorial University of Newfoundland from other universities or equivalent institutions shall either spend a minimum of four of the seven semesters as full-time students at Memorial University of Newfoundland, and take a minimum of 24 credit hours in courses from their Honours discipline or take a minimum of 36 credit hours in courses from their Honours discipline as full-time students at Memorial University of Newfoundland (whichever is to their advantage), provided that the total number of semesters spent as full-time students at this and other recognized universities or equivalent institutions will not be less than seven.
   b. To qualify for an Honours Degree in Science and additionally a second degree, a candidate shall attend this University for at least ten semesters as a full-time student, except with the special permission of the Faculty Committee on Undergraduate Studies.

6. Academic Standing
   In order to graduate with an Honours degree, a candidate shall obtain:
   a. a grade of "B" or better, OR an average of 75% or higher (whichever is to the candidate's advantage) in the minimum number of courses in the Honours subject (or subjects) prescribed by the Department (or, in the case of joint Honours, Departments) concerned, excluding the 1000-level courses,
   AND
   b. an average of at least 2.75 points on the total number of courses required for the degree (see UNIVERSITY REGULATIONS - General Academic Regulations (Undergraduate), Grading for explanation of the point system).
   
   Note: A student may, with the approval of the Head of the Department and the Committee on Undergraduate Studies, repeat or substitute up to three courses in order to meet the requirements of Clause 6.a. above. In counting repeats, each attempt at the same course will count as one course towards the maximum. That is, the same course, repeated three times, would place a student at the maximum and no additional repeats or substitutions would be allowed.

7. Classification of Degrees
   a. If the candidate's general average is 3.25 or better per required course, and his (her) average for the courses in his (her) Honours subject (excluding 1000-level courses) is 3.50 or better, he (she) shall be awarded an Honours degree with First Class standing.
   b. If the candidate fulfills the conditions of Clause 6, but not of Clause 7 a., he (she) shall be awarded an Honours degree with Second Class standing.
   c. No classification will be given to the degree awarded a candidate who has completed (i) fewer than one half of the courses required for the degree at this University, or (ii) who has completed fewer than one half of the courses required for the degree at this University since 1959. All candidates for such degrees shall, however, fulfill the conditions of Clause 6. on the courses taken at the University since September, 1959, in order to qualify for the degree.
   d. A declared candidate for an Honours degree who fails to attain the academic standing specified in Clause 6. but fulfills the academic requirements for a General Degree shall be awarded a General Degree, the classification of which shall be determined in accordance with the UNIVERSITY REGULATIONS - General Academic Regulations (Undergraduate), Graduation.

6 Waiver of Regulations for Undergraduate Students
   Where circumstances warrant, any prerequisite or prerequisites listed in Departmental Regulations may be waived by the Head of the Department. Any Department Regulations may be waived by the appropriate Committee on Undergraduate Studies upon request of the Head of the Department concerned.
7 Program Regulations

7.1 Biochemistry

The following undergraduate programs are available in the Department:

1. Biochemistry and Cell Biology/Microbiology Joint Honours
2. Biochemistry and Chemistry Joint Honours
3. Biochemistry and Physics Joint Honours
4. Biochemistry and Psychology (Behavioural Neuroscience Joint Honours)
5. Biochemistry (Nutrition) and Psychology (Behavioural Neuroscience) Joint Honours
6. Major or Honours in Biochemistry
7. Major or Honours in Dietetics - Admission to this program is under review. For further information see Important Note under Professional Program in Dietetics.
8. Major or Honours in Nutrition
9. Minor in Biochemistry

Students who wish to enrol in any of these programs should plan their program well in advance so that they will have taken the appropriate prerequisites. Entry to a number of required courses is limited and will be determined by academic performance. Required courses should be taken in the year indicated by the course numbers so as to avoid timetable clashes and missing prerequisites which could prolong the time necessary to complete the program. Students are advised to consult with the Department at the earliest opportunity.

Candidates for the general and honours degrees in the programs above should refer to the Faculty of Science Degree Regulations for the General and Honours degrees of Bachelor of Science.

Candidates for a minor in Biochemistry should refer to the Regulations for the General Degree of Bachelor of Science, Clause 7.

Students who intend to pursue graduate studies should take the courses leading to the honours degree.

Biochemistry course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Biochemistry.

Note: Supplementary examinations will be allowed in certain Biochemistry courses which have written final examinations. Students should refer to the Faculty of Science Degree Regulations for details.

7.1.1 Admission to Programs

Students who wish to declare a Major in Biochemistry or Biochemistry (Nutrition) or who wish to apply for Honours standing in any of our programs are strongly recommended to do so by May 31 in any year. Failure to apply by the recommended date may result in your application not being processed before your registration time. In addition, students who do not declare by this date may not be considered for departmental scholarships or other awards.

Note: For further information see regulations governing admission to Biochemistry (Dietetics).

7.1.2 Major in Biochemistry

Entry to the Biochemistry Majors program is based on academic standing.

1. To be considered for admission to the program students must have at least 30 credit hours in courses and have successfully completed the following courses (or their equivalents) with a minimum overall average of 60%. In addition, students must be eligible for entry to Chemistry 2400.
   a. English 1080, 1110 (or equivalent)
   b. Chemistry 1050, 1051 (or Chemistry 1010, 1011 or 1200, 1001)
   c. Mathematics 1000, 1001 (or Mathematics 1090, 1000)
   d. Physics 1050, 1051 (or Physics 1020, 1021), or Biology 1001, 1002

2. Required courses to complete the major:
   a. Biochemistry 2100, 2101, 3105, 3106, 3107, 3108.
   b. At least 12 credit hours in courses from Biochemistry 3200, 4002, 4101, 4103, 4104, 4200, 4201, 4230-4239.
   c. Medicine 310A/B or 6 credit hours from Biochemistry 4240-4249, Biology 2060, 3050, 3401, 3402, 3530, 4200, 4245, 4404, Chemistry 4201.
   d. Biology 1001 and 1002; Mathematics 1001; and Physics 1020 or 1050, and 1051 for those students who did not complete them in first year. Students may also need to complete Physics 1021 in order to fulfill this requirement.
   e. Chemistry 1031 which is strongly advised to be taken prior to second year for those students who complete Chemistry 1010 and 1011 in first year. see Note 2. below.
   f. Chemistry 2300 or 2301, or Physics 2053; Chemistry 2400, 2401
   g. one of Chemistry 3100, Environmental Sciences 3210, Environmental Sciences 3211.

Notes: 1. Students are required to complete at least 78 credit hours in Science courses for the General Degree.
       2. Majors who take Chemistry 1010/1011 but not Chemistry 1031 as part of their first year sequence risk waiting a whole year before they can continue taking Biochemistry program courses.
       3. For the purposes of a Biochemistry degree, Medicine 310A/B count as Biochemistry courses.

3. Students are encouraged to choose a minor.

7.1.2.1 Honours Degree in Biochemistry

Students normally should apply for an Honours program at the completion of their third year of studies. Honours students would normally follow the Biochemistry Majors program before applying to honours, and must meet its admissions requirements as follows:

1. To be considered for admission to the majors program prior to admission to honours, students must have at least 30 credit hours in courses and have successfully completed the following courses (or their equivalents) with a minimum overall average of 60%. In addition, students must be eligible for entry to Chemistry 2400.
   a. English 1080, 1110 (or equivalent)
b. Chemistry 1050, 1051 (or Chemistry 1010, 1011, or 1200, 1001)
c. Mathematics 1000, 1001 (or Mathematics 1090, 1000)
d. Physics 1050, 1051 (or Physics 1020, 1021) or Biology 1001, 1002

2. To be eligible for admission, students must be in Honours standing. To be considered for early admission to an Honours program in Biochemistry at the end of second year, students must have achieved at least 70% in each of Biochemistry 2100 and 2101 and Chemistry 2400, 2401.

3. Required courses:
   a. Biochemistry 2100, 2101, 3105, 3106, 3107, 3108, 4102, 499A, 499B, Medicine 310A/B.
   b. Biochemistry 4210 or 4211.
   c. Twelve credit hours in courses from Biochemistry 4002, 4101, 4103, 4104, 4200, 4201, 4230-4239.
   d. At least 6 credit hours in courses from Biochemistry 3200, 3201, 4105, 4220, 4240-4249, Biology 2060, 3050, 3530, 4200, 4245, 4404, Chemistry 4201.
   e. Biology 1001 and 1002; Mathematics 1001; and Physics 1020 or 1050, and 1051 for those students who did not complete them in first year. Students may also need to complete Physics 1021 in order to fulfill this requirement.
   f. Chemistry 1031 which is strongly advised to be taken prior to second year for those students who complete Chemistry 1010 and 1011 in first year (see Notes below).
   g. Chemistry 2300 or 2301 or Physics 2053, Chemistry 2400, 2401, one of Chemistry 3410 or 3411.
   h. One of Chemistry 3100, Chemistry 3500, Environmental Sciences 3210, Environmental Sciences 3211.
   i. Statistics 2550 or equivalent.

   Notes: 1. Majors who take Chemistry 1010/1011 but not Chemistry 1031 as part of their first year sequence risk waiting a whole year before they can continue taking Biochemistry program courses.
   2. For the purposes of a Honours Degree in Biochemistry, Medicine 310A/B count as Biochemistry courses.

4. Students are encouraged to choose a minor.

   Those courses in which a grade "B" or an average of 75% or higher are required, as specified in clause 6. a. of the Regulations for the Honours Degree of Bachelor of Science, are 45 credit hours in Biochemistry courses and 15 credit hours in other courses (beyond the 1000-level) chosen from Biochemistry, Biology, or Chemistry. Biochemistry 2010, 2011, Biology 2040, 2041 and the former Chemistry 2600, the former Chemistry 2601 may not be used to meet this requirement. Medicine 310A/B counts as Biochemistry for these 60 credit hours.

7.1.2.2 Minor in Biochemistry

Students who take a minor in Biochemistry will complete:

1. Biochemistry 2101, 3106
2. Either Biochemistry 2100 or Biology 2250
3. Nine credit hours in Biochemistry at the third or fourth year level.
4. Either Chemistry 2400, 2401 or Chemistry 2440 and 3 additional credit hours from the Biochemistry courses listed in 3. above.

Course prerequisites stipulated in the course descriptions shall apply to a minor in Biochemistry.

Note: For the purposes of a Biochemistry minor, Medicine 310A/B count as Biochemistry courses.

7.1.3 Nutrition Program

7.1.3.1 Major in Nutrition

Entry to the Nutrition majors program is based on academic standing.

1. To be considered for admission to the program students must have at least 30 credit hours in courses and have successfully completed the following courses (or their equivalents) with a minimum overall average of 60%.
   a. English 1080, 1110 (or equivalent)
   b. Chemistry 1050, 1051 (or Chemistry 1010, 1011 or 1200, 1001)
   c. Mathematics 1090, 1000 (or Mathematics 1000 and one elective)
   d. Biology 1001, 1002 or Physics 1020, 1021 (or equivalent)

2. Required courses to complete the major:
   a. Biochemistry 2000 or 2005, 2100, 2101, 3106, 3200, 3201, 3402, 4300, 4301, Medicine 310A/B
   b. Six credit hours in courses from Biochemistry 3107, 3108, 3202, 4002, 4101, 4103, 4104, 4200, 4201, 4230-4249.
   c. Biology 1001 and 1002; and Physics 1020 and 1021 (or equivalent), for those students who did not complete them in first year
   d. Chemistry 2440 (or Chemistry 2400, 2401)
   e. Statistics 2550 or equivalent

3. Students are encouraged to choose a minor.

Notes: 1. Students are required to complete at least 78 credit hours in Science courses for the General Degree.
   2. Students who choose to complete Chemistry 2400/2401 are advised to take the appropriate prerequisites for those courses.
   3. For the purposes of a Biochemistry (Nutrition) degree, Medicine 310A/B count as Biochemistry courses.

7.1.3.2 Honours Degree in Nutrition

Students normally should apply for an Honours program at the completion of their third year of studies. Honours students would normally follow the Biochemistry (Nutrition) Majors program before applying to honours, and must meet its admissions requirements as follows:

1. To be considered for admission to the majors program prior to admission to honours, students must have at least 30 credit hours in courses and have successfully completed the following courses (or their equivalents) with a minimum overall average of 60%:
   a. English 1080, 1110 (or equivalent)
   b. Chemistry 1050, 1051 (or Chemistry 1010, 1011, or 1200, 1001)
   c. Mathematics 1090, 1000 (or Mathematics 1000 and one elective)
2. To be eligible for admission to the honours program, students must be in Honours standing. To be considered for early admission to an Honours program in Nutrition at the end of second year, students must have achieved at least 70% in each of their required 2000 level Biochemistry and Chemistry courses.

3. Required courses:
   a. Biochemistry 2000 or 2005, 2100, 2101, 3106, 3107, 3200, 3201, 3402, 4002, 4300, 4301, 4502, Medicine 310A/B.
   b. Twelve additional credit hours chosen from Biochemistry 3105, 3108, 3202, 4101, 4103, 4104, 4105, 4200, 4201, 4210, 4211, 4220, 4230-4249, 4400, Biology 3050.
   c. Either Biochemistry 499A/B or 4999 plus an additional 3 credit hours 4000 level Biochemistry course.
   d. Biology 1001 and 1002; and Physics 1020 and 1021 (or equivalent), for those students who did not complete them in first year.
   e. Chemistry 2440 (or Chemistry 2400, 2401).
   f. Statistics 2550 or equivalent.

4. Students are encouraged to choose a minor.

5. Those courses in which the grades specified in clause 6.a. of the Regulations for the Honours Degree of Bachelor of Science are 60 credit hours chosen from Biochemistry courses and Biology 3050.

Notes: 1. Students who choose to complete Chemistry 2400/2401 are advised to take the appropriate prerequisites for those courses.
   2. For the purposes of a Biochemistry (Nutrition) Honours degree, Medicine 310A/B count as Biochemistry courses.

7.1.4 Professional Program in Dietetics

For professional qualification as a dietitian, students are required to complete the degree in Dietetics, followed by an approved Dietetic Internship.

Note: The Department of Biochemistry does not expect to admit students to the Dietetics program in the future. Further information on the status of the program can be obtained from the Department.

7.1.4.1 Admission to Dietetics

All applications for entry to the program for the Bachelor of Science in Dietetics must be submitted to the Head of the Department of Biochemistry by April 30 in any year.

Entrance to the program in Dietetics is on the basis of competition for a fixed number of places. The Admission Committee takes into account the applicant's educational background and information on an applicant's personal qualities and achievements as given by the applicant and by referees' reports.

1. To be eligible for consideration, an applicant must have completed a minimum of 30 credit hours in courses which have been taken or accepted for credit at a recognized university or university college before entry to the Dietetics program.

2. Students applying to enter are required to have successfully completed the following courses or their equivalents:
   a. Chemistry 1050, 1051 (or Chemistry 1010, 1011 or 1200, 1001)
   b. English 1080, 1110 (or equivalent)
   c. Mathematics 1090, 1000 (or Mathematics 1000 and one elective)
   d. Physics 1020 and 1021 (or Physics 1050 and 1051).
   e. either Biology 1001 and 1002 or Psychology 1000 and 1001

3. No application will be considered from an applicant who cannot produce evidence that the above requirements have been met or will have been met by the time of entry into the Dietetics program.

4. After admission, the program will consist of two years of study at this University and a final year at Acadia University. The number of seats available at Acadia University is limited. When a student is accepted into the Dietetics program at Memorial University of Newfoundland, the year that student is expected to attend Acadia University will be set. No guarantee of space will be available in other years.

7.1.4.2 Registration and Promotion

The following regulations apply to the program courses taken at Memorial University of Newfoundland.

1. Biochemistry and Chemistry courses shall be taken in the program year indicated by the course number. Biology 1001 and 1002 must be completed by the end of the second year of the program. The remaining courses are to be scheduled so that the course load is five in each semester. Exceptions to this prescribed program, including specified course load, must have the approval of the Committee on Undergraduate Studies of the department. Students who have completed program courses in advance of admission to the program may arrange with the Committee a reduction in the required course load.

2. For promotion from each term the requirements are: the achievement of a passing grade in all courses; an overall average of at least 60% in those courses required in each academic term; and completion of the appropriate course load as outlined above.

3. Students who fail to achieve the standards outlined in the paragraph above will be required to withdraw from the program. They may be considered for readmission at which time they will normally be required to repeat the courses in which they failed, and/or to repeat courses which will raise the average to 60%, unless, in the opinion of the Head, a more meaningful course of study would be appropriate.

4. In order to be considered for readmission, students must formally apply for readmission to the program not later than the deadline date specified in the first paragraph of the Admission section of this program.

7.1.4.3 Major in Dietetics

1. Required courses at Memorial University of Newfoundland:
   b. Either Biochemistry 3054 or Biology 3050.
   c. Biology 1001, 1002 (if not taken in first year).
   e. Chemistry 2440 (or Chemistry 2400, 2401)
   f. Statistics 2550 or equivalent.
g. Six credit hours in social science courses if Psychology 1000 and 1001 were not taken in first year.

h. Three credit hours in Computer Science.

Notes: 1. Students who choose to complete Chemistry 2400/2401 are advised to take the appropriate prerequisites for those courses.
2. For the purposes of a Biochemistry (Dietetics) degree, Medicine 310A/B count as Biochemistry courses.

The above courses must be completed before the year at Acadia University for both the General and the Honours Programs.

2. Required courses at Acadia University:

The equivalent of at least 18 senior level credit hours in nutrition and/or foods must be successfully completed at Acadia University. Courses to make up these credit hours are to be selected in consultation with faculty advisors at Memorial University of Newfoundland and Acadia University.

Note: 120 credit hours in courses must be obtained for the General Degree of Bachelor of Science (refer to Regulations for the General Degree of Bachelor of Science, Clause 1).

7.1.4.4 Honours Degree in Dietetics

Students normally should apply for an Honours program at the completion of their third year of studies. To be eligible for admission, students must be in Honours standing.

In addition to the courses required for the general degree, the program shall include: Either Biochemistry 499A/B or Biochemistry 4999 plus 3 additional credit hours in Nutrition at Memorial University of Newfoundland or Acadia University at the 4000 level.

The 60 credit hours in courses from clause 6. a. of the Regulations for the Honours degree of Bachelor of Science shall be chosen from the required Biochemistry courses in the program outlined above, the Nutrition and Foods courses at Acadia University, and Biology 3050.

7.2 Biology

The following undergraduate programs are available in the Department:

1. Biochemistry and Cell Biology Joint Honours
2. Biology and Earth Sciences (Geology) Joint Honours
3. Biology and Psychology Joint Honours
4. Biology and Psychology (Behavioural Neuroscience) Joint Honours
5. Biology and Statistics Joint Honours
6. Major or Honours in Biology
7. Minor in Biology

Details of joint programs are given after the Regulations for the Honours Degree of Bachelor of Science. Biology course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Biology.

7.2.1 Entrance Requirements

Entry to the Biology Majors Program is competitive and based on academic standing.

To be considered for admission to the program students must have completed Biology 1001/1002 with an average of at least 65%. In addition, applicants will normally have completed the following courses (or their equivalents) and must have a minimum overall average of 60% in these courses.

1. English 1080, 1110 or equivalent
2. Mathematics 1090 and Mathematics 1000 (or Mathematics 1000 only)
3. Chemistry 1010/1011 or Chemistry 1050/1051 or Physics 1020/1021 or Physics 1050/1051
4. If Mathematics 1000 taken, any one other first year course.

Chemistry 1010/1011 (or 1050/1051) should be taken in the first year, as it is a prerequisite for other required courses in the Biology program, and delaying chemistry until second year may make it difficult to complete the program in the normal eight semesters.

7.2.2 Minor in Biology

A minor in Biology will consist of 24 credit hours in Biology courses: 1001 and 1002 (or equivalent) plus any 18 credit hours chosen from the list of Biology courses except Biology 2040, 2041, 2120, and 3053. The choice of courses must be made in consultation with the Head of Biology or delegate and it is recommended (but not required) that students take at least two Biology courses at the 3000 level or above.

7.2.3 General Degree - Major in Biology

Each Biology Major is assigned a faculty advisor who should be consulted on academic problems, including course selection. All students majoring in Biology are required to complete a minimum of 45 credit hours in courses from the Biology Department offering. Those 45 credit hours must include Biology 1001/1002 or their equivalents, the 15 credit hours in core courses listed below, and 24 credit hours in biology elective at the 2000, 3000 or 4000 level except Biology 2040, 2041, 2120, and 3053.

Biology Core (15 credit hours): Biology 2060, 2250, 2600, 2900, plus one of Biology 3401, 3402, 4245 and 4404.

All majors must also successfully complete the following courses or their equivalents:

1. English 1080 and 1110 (or equivalent)
2. Physics 1020/1021 (or 1050/1051)
3. Mathematics 1000
4. Chemistry 1010/1011 (or 1050/1051), 2440
5. Statistics 2550
6. Biochemistry 2101 and 3106

7. Extra Science courses as necessary to fulfill the requirement for 78 credit hours in Science as stipulated in Clause 3. a. of the Regulations for the General Degree of Bachelor of Science.

It is recommended, but not required, that a Computer Science course be included and the Biology Department strongly recommends
2.4 Honours Degrees

The attention of students wishing to take Honours is called to those sections of the Calendar dealing with Regulations for the Degree of Bachelor of Science (Honours).

Sixty-nine credit hours in courses, including the 6 first year credit hours and the 15 required core credit hours outlined in the regulations for the General Degree, and the Honours Dissertation (Biological 499A/499B), shall be taken from the Department of Biology offering. Students may elect to complete an Honours Program in Biology or in one of the joint Honours Programs listed under the heading "Programs in Biology". Programs of students taking Honours shall be drawn up in consultation with the student's supervisor, and must be approved by the Head of the Department (or his/her delegate) in accordance with Regulation 1. b. of the Regulations for the Honours Degree of Bachelor of Science.

A dissertation (6 credit hours) is to be presented on some original piece of work undertaken by the candidate, under the guidance of a faculty member of the department, as appointed by the Department of Biology. For students electing to take one of the Joint Honours Programs, the dissertation shall be on a topic representative of the selected program. The Department of Biology considers the dissertation to be an important part of the Honours Program.

The dissertation will be based on 6 credit hours course (Biology 499A/499B). It will involve directed reading relevant to the dissertation topic, preparation of a dissertation outline, supervised research, data synthesis and interpretation, and preparation and defence of the dissertation.

Two typed copies of the dissertation, complete with figures and tables, are to be submitted not less than two weeks before the end of the semester in which the candidate is registered for Biology 499B. These copies must be submitted to the Head of the Department, and must have met the prior approval of the candidate's Honours supervisor.

Before the last day for examinations in the semester, the candidate will be examined orally on the contents of the dissertation. The examining committee shall consist of the Head of the Department, or delegate, the candidate's supervisor, and an examiner appointed by the Head of the Department in consultation with the candidate's supervisor.

7.2.5 Honours in Biology

Students seeking the Honours Degree in Biology must satisfactorily complete Biology 1001/1002 (or equivalent) and the 15 credit hours of core Biology courses. The remaining 48 credit hours in Biology courses, which must include the dissertation (499A/499B), may be taken as electives from the Biology offering (except Biology 2040, 2041, 2120, and 3053), on the advice of the supervisor. Additional courses from other departments required for the Honours Degree in Biology include those given for the Major in Biology Program as outlined above.

An Honours degree in Biology may comprise a broadly based selection of courses according to the students interests, or it may be more narrowly focussed. An Honours student may focus on any area of Biology where an appropriate supervisor can be found. All Honours students should choose courses in consultation with their supervisors, but it is particularly important that students wishing to focus within the Honours degree should discuss course selection with an Honours supervisor within their area of interest.

As a guide to course selection a number of foci are set out below with some appropriate courses. Note that students are not limited to these areas but may focus their programs wherever they wish provided that (i) an appropriate supervisor is available, (ii) consultation with that supervisor takes place, and (iii) the resources of the Department, as determined by the Head of Department, are appropriate and adequate. Area of focus will not be indicated on the students' transcript.

Focus in Marine Biology

Students wishing to focus on marine biology in their Biology Honours program must fulfil all the requirements for an Honours degree in Biology as set out above. The following courses are recommended for this area of interest: Biology 2010, 2122, 2210, 3050, 3295, 3620, 3709, 3710, 3711, 3712, 4012, 4360, 4505, 4510, 4600, 4601, 4605, 4701, 4750, 4810. (Note: this list is only advisory; these are not required courses).

Focus in Cell/Molecular Biology

Students wishing to focus on cell biology/molecular biology in their Biology Honours program must fulfil all the requirements for an Honours degree in Biology as set out above. The following courses are recommended for this area of interest: Biology 3050, either 3401 or 3402, 3500, 3530, 3540, 3620, 4000, 4040, 4241, 4245, 4402, 4404, 4605. (Note: this list is only advisory; these are not required courses).

Focus in Ecology - Evolution

Students wishing to focus on ecology and/or evolution in their Biology Honours program must fulfil all the requirements for an Honours degree in Biology as set out above. The following courses are recommended for this area of interest: Biology 3041, 3050, 3295, 3610, 3620, 3709, 3710, 3711, 3712, 3714, 4040, 4150, 4306, 4360, the former 4504, 4605; either 4810 or 4820. (Note: this list is only advisory; these are not required courses).

7.3 Chemistry

The following undergraduate programs are available in the Department:

1. Applied Mathematics and Chemistry Joint Honours
2. Biochemistry and Chemistry Joint Honours
3. Chemistry and Earth Sciences Joint Honours
4. Chemistry and Physics Joint Honours
5. Major or Honours in Chemistry
6. Minor in Chemistry

These programs are accredited by the Canadian Society for Chemistry.

Details of joint programs are given after the Regulations for the Honours Degree of Bachelor of Science.

Chemistry course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Chemistry.
7.3.1 Undergraduate Handbook

Additional information about the undergraduate program, individual courses and suggested timetables can be found in the Department of Chemistry Undergraduate Handbook which is available on the web at www.chem.mun.ca.

7.3.2 Faculty Advisors

Each student majoring in Chemistry will be assigned a Faculty Advisor who should be consulted on all academic matters. Individual programs must be drawn up in consultation with the advisor.

Note: Students who have obtained a grade of 3 or better on the Advanced Placement courses in Chemistry will normally be eligible for direct entry into Chemistry 1031 or second year courses. Such students must consult the department before registration.

7.3.3 Minor in Chemistry

Candidates who take a minor in Chemistry will complete Chemistry 1050 and 1051 (or 1010, 1011 and 1031) or equivalent, Chemistry 2400, 2401, 2210, 2301 (or 2300) and 2302 (or the former Chemistry 3301) as well as at least 3 credit hours in courses chosen from Chemistry 3100, 3211, 3303 (or the former Chemistry 3300), 3410, 3411 and 3500.

7.3.4 General Degree - Major in Chemistry

The courses required for a Major in Chemistry are:

1. Chemistry 1050 and 1051 (or 1010, 1011 and 1031) or equivalent, Chemistry 2301 (or 2300), Chemistry 2302 (or the former Chemistry 3301), Chemistry 2210, 2400, 2401, 3100, 3211, 3303 (or the former Chemistry 3300), Chemistry 3410, 3411, 3500 and 4110.
2. Physics 1050 (or 1020 and 1021) and 1051.
4. Biochemistry 2101

Recommended courses: Mathematics 2051, Physics 2820 and/or 2750, and 6 credit hours in one of the following languages: French, German, or Russian.

Students considering declaring Chemistry as their Major are encouraged to contact either the Department Head or the Deputy Head (Undergraduate Studies).

7.3.5 Honours Degree in Chemistry

Students wishing to take Honours should consult those sections of the Calendar dealing with Regulations for the Honours Degree of Bachelor of Science. The Honours program in Chemistry consists of at least 63 credit hours in Chemistry courses. It is recommended that candidates also take groups of 18 or more credit hours in each of two other science subjects, normally Biochemistry, Biology, Earth Sciences, Physics, or Mathematics.

Required Courses

1. Chemistry 1050 and 1051 (or 1010, 1011 and 1031) or equivalent, Chemistry 2301 (or 2300), Chemistry 2302 (or the former Chemistry 3301), Chemistry 2210, 2400, 2401, 3100, 3211, 3303 (or the former Chemistry 3300), Chemistry 3410, 3411, 3500, 4110, 490A/B and 15 credit hours selected from the remaining 4000-level courses.
2. Physics 1050 (or 1020 and 1021) and 1051.
4. Biochemistry 2101

Those courses in which a grade of B or an average of 75% or higher are required, as specified in Regulations for the Honours Degree of Bachelor of Science, Academic Standing, clause 3.5.6.a., are the courses beyond first year used to satisfy clause 1. above, and Biochemistry 2101.

Recommended courses: Biochemistry 2100, Mathematics 2051, Physics 2820 and/or 2750.

A thesis based on a selected research topic carried out under the supervision of a member of the department is to be submitted in the final year.

Chemistry 490A/B will normally require the equivalent of nine hours per week for two semesters. Registration in Chemistry 490A/B is restricted to those students who have honours standing. The Honours dissertation will be assessed by a committee comprising the supervisor and two other faculty members.

With approval of the Heads of the Chemistry and Biochemistry Departments prior to registration, a number of courses in Biochemistry may be substituted for a like number of Chemistry courses.

Six credit hours in one language are recommended: French, German or Russian should be selected in consultation with the Department Head.

Prospective Honours students in Chemistry in their first year should take

1. Six credit hours in English.
2. Chemistry 1050 and 1051 (or 1010, 1011 and 1031) or their equivalents.
3. Physics 1050 and 1051 or 1020 and 1021.
4. Mathematics 1000 and 1001
5. Six credit hours in other courses.

Given appropriate circumstances the Honours Chemistry program may be completed in four years. Students should consult the Undergraduate Student Handbook for timetabling details.

Note: Students completing first year requirements for any of Chemistry, Mathematics or Physics via the three course options (i.e. Chemistry 1010, 1011, 1031 (or the former 1800, 1200, 1001), Mathematics 1090, 1000, 1001, Physics 1020, 1021, 1051) instead of the two course options (Chemistry 1050, 1051, Mathematics 1000, 1001, Physics 1050, 1051) will require the corresponding number of extra credits to obtain an Honours degree.

Arrangements for subsequent years will depend on the other science subjects being studied and should be made in consultation with the Head of the Department.

Note: Certain advanced courses may only be offered in alternate years. Candidates therefore should consult the Head of the Department before registration.

Certain of the Graduate courses may be taken in the final year of the Honours Program with the permission of the Head of the
7.3.6 Course Restrictions
Credit will be given for no more than one of the former Chemistry 1000, Chemistry 1010, 1050, 1200, the former 150A/B, no more than one of Chemistry 1001, 1031, 1051, the former 150A/B, and no more than one of Chemistry 1001, 1011, 1051, the former 150A/B. Credit will only be given for one of the following pairs of courses, Chemistry 2301 and Chemistry 2300 (offered at SWGC), Chemistry 2302 and the former Chemistry 3301, and Chemistry 3303 and the former Chemistry 3300.

7.4 Computer Science
The following undergraduate programs are available in the Department:
1. Applied Mathematics and Computer Science Joint Major (B.Sc. only)
2. Computer Internship Option (CIIO) (B.Sc. and B.Sc. Honours only)
3. Computer Science Honours (B.A., B.Sc.)
4. Computer Science and Economics Joint Major (B.Sc. Only)
5. Computer Science and Geography Joint Honours (B.Sc. only)
6. Computer Science and Geography Joint Major (B.Sc. only)
7. Computer Science and Physics Joint Honours
8. Computer Science and Physics Joint Major
9. Computer Science and Pure Mathematics Joint Honours (B.Sc. only)
10. Computer Science and Pure Mathematics Joint Major (B.Sc. only)
11. Computer Science and Statistics Joint Honours
12. Computer Science and Statistics Joint Major (B.Sc. only)
13. Computer Science (Software Engineering) Honours (B.Sc. only)
14. Major in Computer Science (B.A., B.Sc.)
15. Minor in Computer Science (B.A., B.Sc.)

Details of our joint program offerings in the Faculties of Arts, Science, and Business Administration may be found under the heading Joint Programs following the heading Regulations for the Honours Degree of Bachelor of Science.

Computer Science course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Computer Science.

7.4.1 Major in Computer Science
1. Forty-five credit hours in Computer Science courses are required for a major in Computer Science:
   a. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, and 4770.
   b. At least 6 additional credit hours at the 4000 level in Computer Science courses.
   c. Three additional credit hours in Computer Science courses at the 3000 level or beyond.

Note: Students are encouraged to take Business 2000, Mathematics 3000, and Statistics 2560.

7.4.2 Honours in Computer Science
1. See Regulations for the Honours Degree of Bachelor of Arts or Regulations for the Honours Degree of Bachelor of Science as appropriate).
2. Sixty-three credit hours in Computer Science courses are required for the Honours Degree in Computer Science, including:
   a. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3719, 3724, 3725, 3754, 4770, and 4780.
   b. Eighteen additional credit hours in Computer Science at the 4000 level.
   c. Six additional credit hours in Computer Science courses at the 3000 level or beyond.
3. Additional courses required are: Mathematics 2000, 2050, Statistics 2510 and Pure Mathematics 2320.

Note: Students are encouraged to take Business 2000, Mathematics 3000, and Statistics 2560.

7.4.3 Honours in Computer Science (Software Engineering) (B.Sc. Only)
Completion of the Honours in Computer Science (Software Engineering) Program does not qualify persons to hold the designation "Professional Engineer" as defined by various Provincial Acts governing the Engineering Profession.
1. See Regulations for the Honours Degree of Bachelor of Science.
2. Sixty-three credit hours in Computer Science courses are required for the Honours Degree in Computer Science (Software Engineering), including:
   a. Computer Science 1710, 2710, 2711, 2742, 2760, 3715, 3716, 3718, 3719, 3724, 3725, 3754, 4719, 4759, 4770, and 4780.
   b. Twelve additional credit hours in Computer Science courses at the 4000 level.
   c. Three additional credit hours in Computer Science courses at the 3000 level or beyond.

Note: The Honours project (4780) must be in the area of Software Engineering.

7.4.4 Computer Industry Internship Option (CIIO):
The Computer Industry Internship Option (CIIO) provides an opportunity for qualified students to obtain rewarding placements that help them develop practical skills in a real work setting before graduation. The CIIO is available to Computer Science Majors (B.Sc. and B.Sc. Honours only) who will typically apply between their third and fourth year of studies.
Admission Requirements:
In order to be considered for admission to the CIIO, an applicant must:
1. be a declared Computer Science Major;
2. have successfully completed Computer Science 1710, Computer Science 2710, Computer Science 2711, Computer Science 2742, Computer Science 2760, Computer Science 3716, and any two other core 3000-level computer science courses; and
3. have at least one computer science course left to complete after the internship.
In addition to meeting the above applicants are also subject to academic performance.

Internship Duration:
Subject to the availability of job openings, a student may choose either an 8, 12 or 16 consecutive month internship period.

Internship Guidelines:
1. Internship employment is normally organized by the Co-op Education Co-ordinator (hereafter referred to as the Co-ordinator); however, students who have accepted to the CIIO may also obtain their own internship placements. All placements are subject to the approval of the Co-ordinator and of the Head of the Department of Computer Science.
2. Students who have applied to the internship program give permission to the Co-ordinator to supply prospective employers with copies of their resume and transcript.
3. After being placed with an employer, students are not permitted to drop their internship without prior approval from the Co-ordinator and the Head of the Department of Computer Science. Students who drop an internship without permission, who fail to honour an agreement to work with an employer, or who conduct themselves in such a manner as to cause their discharge from the placements, will normally be awarded a fail grade for the internship period and may not be permitted to reapply.

Note: Students should also refer to the UNIVERSITY REGULATIONS - General Academic Regulations (Undergraduate).

Expectation of Work:
Within a month of starting the internship, students are required to submit a list of their work term objectives. They are also required to submit a progress report due the last day of classes of each semester in which they are working. The work term objectives and progress reports are to be submitted to the Co-ordinator.

At the end of the internship period, students are required to submit a final report which will include a description of their internship projects and activities as well as their original objectives and accomplishments. The final report is to be submitted to the Co-ordinator by the last day of classes of the semester in question. A completed Employer Evaluation Form should be submitted to the Co-ordinator at the end of the internship period.

Registration, Assessment of Performance, and Assignment of Grades:
Students must register for the course Computer Science 3700 every semester during their internship.

Computer Science 3700 is a non-credit course open only to students who have been accepted into the Internship Program.

During the internship, the employer and intern will complete student performance evaluations every four months and will submit them to the Co-ordinator. The final assessment of total work performed is the responsibility of the Co-ordinator, and will be based upon both input from the employer and the intern’s final report.

At the end of the internship, each intern will be assigned one of the following grades after the final assessment of their performance:
1. Pass with Distinction (PWD): Indicates excellent performance in both the work report and work performance.
2. Pass (PAS): Indicates that performance meets expectations in both the work report and the work performance.
3. Fail (FAL): Indicates failing performance in the work report or the work performance.

Also, the following will be noted in the transcript of the intern:
1. Requirements for the Computer Industry Internship Option have been completed. Internship Duration: - months.
2. A grade of NC (No Credit) for Computer Science 3700 will be awarded in all semesters of the Internship Option prior to the final Semester.

CIIO and Honours Program:
In case a student is enrolled in both the Honours program and the CIIO, the requirements of both must be met. Upon approval from the honours project supervisor, within the Department, the employer and the Head of the Department of Computer Science, an internship project may be submitted as a component of an honours project. These arrangements must be made within the first semester of the Internship placement.

7.4.5 Minor in Computer Science
1. For a Minor in Computer Science, a student must complete at least 24 credit hours in Computer Science courses, including:
   Computer Science 1710, 2710, 2711, 2742, 2760.
2. The remaining 9 credit hours in Computer Science courses must be at the 3000 level or above.

7.4.6 Course Numbering Scheme
There are five areas of Computer Science offered in the 3000- and 4000-level courses. The meaning of the third digit of a course number is as follows:
1- Programming Languages
2- Computer Systems
3- Numerical Computations
4- Theoretical Aspects
5- Applications (e.g. Artificial Intelligence, Computer Graphics, Data Base, Robotics, Computational Geometry, Image Processing, Computer Networking, Computer Aided Design)
7 - Project Course
8- Honours Project
9- Directed Readings
7.4.7 Supplementary Examinations
Supplementary examinations will be allowed in certain Computer Science courses which have written final examinations. Students should refer to the Faculty of Science degree regulations for details.

7.4.8 Faculty Advisors
The Department has an Undergraduate Advisor for Computer Science majors to consult with on academic matters.

7.4.9 Undergraduate Handbook
Additional information about the undergraduate Computer Science programs and courses can be found in the Computer Science Undergraduate Handbook available from the General Office, Department of Computer Science or from www.mun.ca/computerscience/.

7.5 Earth Sciences
The following undergraduate programs are available:

120 credit hour programs
1. Earth Sciences and Geography Joint Honours
2. Earth Sciences and Physics Joint Honours
3. Earth Sciences and Physics Joint Major
4. General or Honours degrees in Earth Sciences
5. Geophysics and Physical Oceanography Joint Honours

135 credit hour programs
1. Biology and Earth Sciences Joint Honours
2. Chemistry and Earth Sciences Joint Honours

24 credit hour program
1. Minor in Earth Sciences

Although Honours programs can be completed in 120 credit hours, students who do not select the prescribed common block of required courses will normally need more than 120 credit hours to satisfy degree requirements.

Details of joint programs are given after the Regulations for the Honours Degree of Bachelor of Science.

Earth Sciences course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Earth Sciences.

7.5.1 Undergraduate Handbook
Additional information about the undergraduate program, individual courses and suggested timetables can be found in the Department of Earth Sciences Undergraduate Handbook which is available on the web at www.mun.ca/earthsciences.

7.5.2 Entrance Requirements
In order to be formally admitted to major programs in Earth Sciences, students must have successfully completed 3 first-year credit hours in each of the following departments: English, Mathematics, Earth Sciences, Chemistry and Physics; these courses must be selected from the list of required courses for degree programs in Earth Sciences. Students are encouraged to declare their major in their first year of study at the university.

Most of the 2000 level Earth Sciences courses that are required for major and minor programs in Earth Sciences have Physics and Chemistry prerequisites, and students are advised to complete these prerequisites in their first year of study.

Students will not normally be permitted entry to 3000 level (or above) Earth Sciences courses without having completed all 1000-level courses listed in the Common Block of Required Courses specified in Clause 1. in the Major Programs in Earth Sciences.

7.5.3 Minor in Earth Sciences
A Minor in Earth Sciences will consist of the following:
1. Earth Sciences 1000, 1002, 2030, 2031, 2401 or 2702.
2. Nine credit hours chosen from Earth Sciences courses at the 2000 level or higher with at least 3 credit hours from courses at the 3000 level or higher. Credit hours from Earth Sciences 2150, 2311, 2914, 2915, 2916, 2917, 4310 and 4950 cannot be used to fulfill this requirement.

Several of the courses at 3000 level or higher have Earth Sciences 2502 and 2905 as co- or prerequisites.

7.5.4 Major Programs in Earth Sciences
Programs in Earth Sciences consist of a common block of required courses (below), and additional courses that depend on the degree being sought.

Common Block of Required Courses:
All majors in Earth Sciences must complete those courses specified in Clauses 1. through 4. Students should examine prerequisites of 3000 level courses in order to decide which course to select under Clauses 3. and 4.

1. English 1080 and 1110 (or equivalent), Mathematics 1000 and 1001, Earth Sciences 1000 and 1002, one of Chemistry 1010 or 1050 (or equivalent) and one of Chemistry 1011 or 1051 (or equivalent), Physics 1050 and 1051 or Physics 1020 and 1021. Students are student advised to consult the Department of Physics Courses Descriptions section for credit restrictions.

Students who intend or are required to complete higher level Physics courses must complete Physics 1051 as well, since it is a prerequisite for higher level Physics courses. Students should review the Department of Physics Calendar entry for these courses.

Students will receive credit for only two first year Physics courses if they take Physics 1020, 1021 and 1051.

2. Earth Sciences 2030, 2031, 2401, 2502, 2702, 2905, 3420.
4. Either Biology 2120 (or Biology 1001 and 1002); or both Physics 2055 and Physics 2820.
Students must ensure that the prerequisites for Earth Sciences courses are fulfilled. Great difficulties in timetabling may be encountered if the required first-year courses are not completed before the beginning of second year.

### 7.5.5 Honours B.Sc. Degree in Earth Sciences

Geoscientific careers vary widely in required background. The Honours B.Sc. program is designed with considerable choice in order that students may personalize their programs based on career goals. Note that the flexibility afforded by this program is not without limits. Some courses have prerequisites, and it is ultimately the student's responsibility to ensure that these prerequisites are satisfied. Students should consult faculty members and the departmental Student Handbook for guidance in selecting courses appropriate to particular career paths.

In addition to the **Common Block of Required Courses** listed under **Major Programs in Earth Sciences**, the following requirements must be completed to qualify for the Honours B.Sc. degree in Earth Sciences:

1. Earth Sciences 499A and 499B.
2. At least 28 additional credit hours from Earth Sciences courses at 3000 and/or 4000 levels with a minimum of 12 credit hours from courses at the 4000 level. Credit hours from Earth Sciences 2150, 2914, 2915, 2916, 2917, 4310 and 4950 cannot be used to fulfill this requirement.
3. Six credit hours from the Faculty of Science courses numbered 2000 or higher. Credit hours from Earth Sciences courses, Biology 3811 and the former Physics 2050 are excluded. However, Physics 2820 is permitted.
4. Additional credit hours selected to conform with regulations for the Honours Degree of Bachelor Science so as to achieve a total of 120 credit hours. Students are encouraged to complete a minor in another department.

### 7.5.6 General B.Sc. Degree in Earth Sciences

In addition to the **Common Block of Required Courses** listed under **Major Programs in Earth Sciences**, the following requirements must be completed to qualify for the General B.Sc. degree in Earth Sciences:

1. Eighteen additional credit hours from Earth Sciences courses at 3000 and/or 4000 levels with a minimum of 9 credit hours from courses at 4000 level. Credit hours from Earth Sciences 2150, 2914, 2915, 2916, 2917, 4310, 4950 and 499A/B cannot be used to fulfill this requirement.
2. Six credit hours from Science Faculty courses numbered 2000 or higher. Credit hours from Earth Sciences courses, Biology 3811 and the former Physics 2050 are excluded. However, Physics 2820 is permitted.
3. Additional credit hours selected to conform with regulations for the General Degree of Bachelor Science so as to achieve a total of 120 credit hours. Students are encouraged to complete a minor in another department.

Students are advised that this is the minimum requirement for the General B.Sc. in Earth Sciences. Many provinces, including Newfoundland and Labrador, have legislation requiring registration of professional geoscientists. A basic requirement for registration is, in most cases, the course equivalent of an Honours B.Sc. degree. Students intending to make a career in Earth Sciences should consider taking the Honours Degree program of courses, regardless of whether honours standing is maintained.

### 7.5.7 Credit Restrictions for Present Earth Sciences (EASC) Courses with Former Courses

</tbody>
</table>

**Notes:**
1. Students wishing to pursue study within the programs offered by Earth Sciences are strongly advised to keep in close contact with the Department to discuss course programs before registration in order to maintain proper sequencing.
2. Students wishing to take some Earth Sciences courses without intending to major in Earth Sciences should consult with the Head of Department
(or delegate) to determine the courses most suitable to their needs and capabilities. Earth Sciences 2914, 2915, 2916, 2917 and 2150 are especially suitable for such students and have no Earth Sciences prerequisites.

3. Most courses comprise six hours of instruction per week, usually three hours of lectures or seminars and a three-hour laboratory period; however, at an advanced level other methods of instruction may be adopted.

4. The field courses 2905, 3705, 3905 and 4905 require payment of a participation fee to cover costs for logistics and equipment. Registration for these courses will be by application only and may be competitive.

5. The prerequisites for courses 4302, 4902 and 4903 refer to core courses in the Faculty of Science. For the purposes of these prerequisite statements, core courses are defined as those courses that are specified by each department as mandatory to fulfill the course requirements for their General or Honours programs.

6. Certain of the 4000 level courses may not be offered every year.

7. At most 6 credit hours in courses at the 1000-level can be used towards the course requirements in Earth Sciences for the Major, Minor, Joint Major, Honours or Joint Honours.

### 7.6 Economics

The following programs are available in the Department of Economics:

1. Honours in Economics (B.A. or B.Sc.)
2. Honours in Economics (Co-operative), (B.A. or B.Sc.)
3. Joint Programs (B.Sc. Only)
4. Joint Program (Co-operative) (B.Sc. Only)
5. Major in Economics (B.A. or B.Sc.)
6. Major in Economics (Co-operative) (B.A. or B.Sc.)
7. Minor in Economics

For Departmental Regulations and Course Descriptions, see Faculty of Arts section of the Calendar.

### 7.7 Geography

The following undergraduate programs are available in the Department of Geography:

1. Diploma in Geographic Information Sciences
2. Focus Area in Geography
3. Honours in Geography (B.A., B.Sc)
4. Joint Programs
5. Major in Geography (B.A., B.Sc)
6. Minor in Geography (B.A., B.Sc)

For Departmental Regulations and Course Descriptions, see Faculty of Arts section of the Calendar.

### 7.8 Mathematics and Statistics

From the point of view of degree regulations, Applied Mathematics, Pure Mathematics, and Statistics are considered to be one subject area.

The following undergraduate programs are available in the Department:

1. Applied Mathematics and Chemistry Joint Honours (B.Sc. only)
2. Applied Mathematics and Computer Science Joint Major (B.Sc. only)
3. Applied Mathematics and Economics Joint Major (B.Sc. only)
4. Applied Mathematics and Physics Joint Honours (B.Sc. only)
5. Applied Mathematics and Physics Joint Major (B.Sc. only)
6. Biology and Statistics Joint Honours (B.Sc. only)
7. Computer Science and Pure Mathematics Joint Honours (B.Sc. only)
8. Computer Science and Pure Mathematics Joint Major (B.Sc. only)
9. Computer Science and Statistics Joint Honours (B.Sc. only)
10. Computer Science and Statistics Joint Major (B.Sc. only)
11. Economics and Pure Mathematics Joint Major (B.Sc. only)
12. Economics and Statistics Joint Major (B.Sc. only)
13. Economics and Statistics (Co-operative) Joint Major (B.Sc. only)
14. Honours in Applied Mathematics (B.Sc. only)
15. Honours in Pure Mathematics
16. Honours in Statistics
17. Major in Applied Mathematics (B.Sc. only)
18. Major in Pure Mathematics
19. Major in Statistics
20. Minor in Mathematics
21. Minor in Statistics
22. Pure Mathematics and Statistics Joint Honours

Details of these programs are given after the Regulations for the Honours Degree of Bachelor of Science. Mathematics and Statistics course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Mathematics and Statistics.

#### 7.8.1 Regulations

1. At most 9 credit hours in Mathematics will be given for courses completed from the following list subject to normal credit restrictions:
Mathematics 1000, 1031, 1050, 1051, the former 1080, the former 1081, 1090, the former 1150 and 1151.

2. At most 6 credit hours in courses below the 2000 level can be used toward the course requirements in Mathematics and Statistics for the Major, Joint Major, Honours or Joint Honours in Applied Mathematics, Pure Mathematics or Statistics.

3. In the program descriptions that follow, Mathematics 1000 may be replaced by the former Mathematics 1081.

4. Credit may be obtained for only one of Statistics 2500, 2510, 2550 and the former Psychology 2900. Credit may be obtained for only one of Statistics 2501, 2560 (former 2511), and the former Psychology 2901.

5. Students with credits in Mathematics or Statistics not listed in this Calendar must consult the department for equivalency before taking any course listed below.

6. The former Mathematics 1150 and Mathematics 1151 were courses designed specifically for students who intended to graduate with a degree in Primary or Elementary Education. No other students can receive credit for these courses. These courses are not acceptable as alternatives to any other First Year Mathematics course listed in this calendar. Students who have received credit for Education 125 or Mathematics 115/125 cannot receive additional credit for the former Mathematics 1150 or Mathematics 1151 or the current Mathematics 1050 or Mathematics 1051.

7. a. For the current academic year the Mathematics Placement Test (MPT) will be used to determine placement in the following courses: Mathematics 1000, Mathematics 1050, Mathematics 1051 and Mathematics 1090.

   b. For subsequent years, students intending to register for the first time in any course below the 2000 level, must first submit a score for one of the following:

   i. Advanced Placement Calculus Examination;

   ii. Other standardized tests acceptable to the Department of Mathematics and Statistics.

### 7.8.2 Faculty Advisors

Normally, the Undergraduate Officer will be the advisor for each student who has undertaken a major in Applied or Pure Mathematics, and the Deputy Head (Statistics) will be the advisor for any student involved in a major in Statistics. Students should consult with their advisor at least once each semester to ensure that their choice of courses is appropriate.

**Note:** The Department of Mathematics and Statistics will endeavour to give appropriate advice to students registered in its programs. However, the department points out that it is the responsibility of the student to see that his or her academic program meets the University's regulations in all respects. Students are referred to the UNIVERSITY REGULATIONS - General Academic Regulations (Undergraduate), Registration, Student Responsibility. The department accepts no responsibility for any matter arising from an inappropriate and/or improperly recorded registration.

### 7.8.3 Course Numbering System

All undergraduate courses offered by the Department of Mathematics and Statistics are identified to year by the first digit and to subject area by the second digit as follows:

<table>
<thead>
<tr>
<th>First Digit</th>
<th>Second Digit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Applied Mathematics</td>
</tr>
<tr>
<td>2</td>
<td>Applied Mathematics and Pure Mathematics</td>
</tr>
<tr>
<td>3</td>
<td>Pure Mathematics</td>
</tr>
<tr>
<td>4</td>
<td>Pure Mathematics and Statistics</td>
</tr>
<tr>
<td>5</td>
<td>Statistics</td>
</tr>
</tbody>
</table>

### 7.8.4 Major in Applied Mathematics (B.Sc. Only)

Students shall complete the following requirements:

2. Three credit hours in Applied Mathematics courses numbered 3000 or higher.

3. A computing course, early in your program. Computer Science 1510 is highly recommended.

4. A designated technical writing course offered by a Science department. Applied Mathematics 2130 is recommended. The technical writing course is prerequisite to some 3000-level courses.

5. Physics 1050 (or 1020) and 1051.

6. A statistics course. Statistics 3410 is recommended.

### 7.8.5 Major in Pure Mathematics

Students shall complete the following requirements:

2. One of Applied Mathematics/Pure Mathematics 3202, 3210, 3260;

3. One of Pure Mathematics 3330, 3370;

4. Twelve further credit hours in Pure Mathematics courses numbered 3000 or higher, at least 6 credit hours of which must be in courses numbered 4000 or higher;

5. A computing course. Computer Science 1510 is recommended.

6. A designated technical writing course offered by a Science department. Applied Mathematics 2130 is recommended.

7. A statistics course. Statistics 3410 is recommended.

### 7.8.6 Major in Statistics

Students shall complete the following requirements:

2. Nine further credit hours in Statistics courses numbered 3000 or higher at least 3 credit hours of which must be in a course numbered 4000 or higher excluding Statistics 4581;
3. Computer Science 2602.
4. Mathematics 3001 is recommended.

7.8.7 Honours in Applied Mathematics (B.Sc. Only)

See Regulations for the Honours Degree of Bachelor of Science. Students shall complete the following:
2. At least one of Applied Mathematics 4162 or 4170;
3. Pure Mathematics/Statistics 3410;
4. Nine further credit hours in courses numbered 3000 or higher that are offered by the Department of Mathematics and Statistics, at least 3 of which must be in courses numbered 4000 or higher;
5. A computing course early in the program is required. Computer Science 1510 is recommended.
6. Physics 1050 (or 1020), 1051, 2820, 3220.

7.8.8 Honours in Pure Mathematics

See Regulations for the Honours Degree of Bachelor of Science. Students shall complete the following requirements:
2. Either Pure Mathematics 3340 or 3370;
3. Either Mathematics 4000 or 4001;
4. Either Pure Mathematics 4320 or 4321;
5. Twelve further credit hours in Pure Mathematics courses numbered 3000 or higher, at least 9 credit hours of which must be in courses numbered 4000 or higher;
6. A computing course early in the program is required. Computer Science 1510 is recommended.

7.8.9 Honours in Statistics

See Regulations for the Honours Degree of Bachelor of Science. Students shall complete the following requirements:
2. Eighteen further credit hours in Statistics courses including at least 12 credit hours in courses numbered 4000 or higher excluding Statistics 4581;
4. Mathematics 4000 and Pure Mathematics/Statistics 4401 are recommended.

7.8.10 Minor in Mathematics

A total of 24 credit hours in courses offered by the Department of Mathematics and Statistics is required of which only 6 credit hours shall be in courses at the 1000 level and at least 6 credit hours shall be in courses numbered 3000 or higher.

7.8.11 Minor in Statistics

The courses required for a minor in Statistics are:
1. Mathematics 1000, 1001; Statistics 2500 or 2510, Statistics 2501 or 2560.
2. Twelve further credit hours in Statistics courses numbered 3000 or higher excluding Statistics 4581.

It is recommended that Mathematics 2000 and Mathematics 2050 be taken since they are prerequisite to several further Statistics courses.

7.9 Physics and Physical Oceanography

The following undergraduate programs are available in the Department:
1. Applied Mathematics and Physics Joint Honours
2. Applied Mathematics and Physics Joint Major
3. Biochemistry and Physics Joint Honours
4. Chemistry and Physics Joint Honours
5. Computer Science and Physics Joint Honours
6. Computer Science and Physics Joint Major
7. Earth Sciences and Physics Joint Honours
8. Earth Sciences and Physics Joint Major
9. Geophysics and Physical Oceanography Joint Honours
10. Honours in Environmental Physics
11. Honours in Physics
12. Major in Environmental Physics
13. Major in Physics
14. Minor in Physics

Details of these joint programs are given after the Regulations for the Honours Degree of Bachelor of Science. Other joint programs may be arranged in consultation with the departments concerned.

Physics and Physical Oceanography course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Physics and Physical Oceanography.
Notes: 1. The attention of students intending to follow any one of the programs listed above is drawn to the UNIVERSITY REGULATIONS - General Academic Regulations (Undergraduate), governing the appropriate degree. Additional Departmental requirements are given below.
2. Faculty advisors are available to provide advice to students who are registered in, or who are considering registering in, any of the programs. Students are urged to consult with these advisors at their earliest opportunity in order to ensure that they select appropriate courses and programs. Students with credits in Physics courses which are not listed in this calendar should consult with the Department.
3. The six course stream consisting of Physics 1020, 1021, 1051, 2053, 2055, 2750, and 2820 or alternatively the seven course stream of Physics 1020, 1050, 1051, 2053, 2055, 2750, and 2820 is intended to provide a cohesive overview of Physics for potential Physics majors.
4. Physics 1050 is open to and recommended for students who have completed Level II Physics, Level III Physics and Level III Advanced Mathematics. Mathematics 1000 must be taken at the same time as, or be completed prior to, taking Physics 1050. Students who have completed Mathematics 1090 and Physics 1050 are required to complete Mathematics 1000 before registering for Physics 1051.
5. Physics 1020 is intended for students who do not qualify for Physics 1050, and while it may be taken by students who have no background in Physics it is recommended that students wishing to take Physics 1020 should have completed at least one of Level II and Level III Physics. Students who complete Physics 1020 and Mathematics 1000 are eligible for admission to Physics 1051. Students may receive credit for only one of Physics 1050 and 1020.
6. Students who have successfully completed Advanced Placement courses in both Physics and Mathematics will normally be eligible for direct entry into Physics 1051, 2053 and 2750, all of which are offered in the Fall semester. Such students are advised to consult the Department.
7. Where circumstances warrant, any prerequisites listed below may be waived by the Head of the Department.
8. Supplementary examinations will be allowed in certain Physics courses which have written final examinations. Students should refer to the Faculty of Science Degree Regulations for details.

7.9.1 Minor in Physics
A minor in Physics will consist of 24 credit hours in Physics courses which must include Physics 1050 (or 1020), 1051, 2053, 2055, 2750, 2820. Only 6 credit hours at the 1000 level can be used to fulfill the 24 credit hours. For those students whose major is Chemistry or Biochemistry, the 24 credit hours in Physics will not include 2053.
For Electrical Engineering students, 24 credit hours in Physics which must include Physics 1050 (or 1020), 1051, 2750, 3000, and 3550 with an additional 9 credit hours selected from Physics 2820, 3600, 3750, 3751, 3800, 4000, 4220, 4600 or other 3000 or 4000 level courses subject to approval by the Head of Physics and Physical Oceanography and the Chair of Electrical and Computer Engineering.

7.9.2 Major in Physics
1. English 1080 and English 1110 (or equivalent).
2. Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031).
5. Physics 1050 (or 1020) and 1051.
6. Physics 2053, 2055, 2750, 2820, 3220, 3400, 3500, 3750 and 3900.
7. An additional 12 credit hours in physics courses numbered 3000 or higher which shall include at least 6 credit hours selected from the courses numbered Physics 3000, 3150, 3300, the former 3410, 3550, 3600, 3751.
8. Physics 3810 or Applied Mathematics/Pure Mathematics 3202.
Mathematics 1001, 2000 and 2050 are prerequisites to many Physics courses and should be completed by the end of second year. Applied Mathematics/Pure Mathematics 3260 is co-requisite to Physics 3220 and should be completed before the winter of the third year. Those who intend to make a career in Physics should note that additional Physics courses are strongly recommended. Mathematics 2051 and Computer Science 1510 or 2602 are also recommended.

7.9.3 Honours in Physics
1. English 1080 and English 1110 (or equivalent).
2. Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031).
4. Computer Science 1510.
6. Physics 1050 (or 1020) and 1051.
7. Physics 2053, 2055, 2750, 2820, 3220, 3230, 3400, 3500, 3600, 3750, 3820, 3900, 4400, 4500, 4820, 4850, 4900, 490A/B.
8. Physics 3810 or Applied Mathematics/Pure Mathematics 3202.
9. An additional 12 credit hours in physics courses numbered 3000 or higher which shall include at least 6 credit hours selected from physics courses numbered 4000 or higher.
10. Fifteen credit hours in applicable elective courses.
Note: Certain of the graduate courses may be taken in the final year of the Honours Program with the permission of the Head of the Department.
Only 6 credit hours at the 1000 level in each of Physics, Chemistry and Mathematics can be used to fulfill the 120 credit hours required for the Honours program. The inclusion of Mathematics 1090, the sequence of Physics 1020, 1021, and 1051 or the substitution of Chemistry 1010, 1011 and 1031 for Chemistry 1050 and 1051 will each increase the number of credit hours required for the Honours Physics program by three.
An Honours thesis is to be presented on work undertaken by the candidate under the guidance of a Department of Physics and Physical Oceanography faculty member. The thesis comprises the 6 credit hour course Physics 490A/B. Students should seek departmental advice regarding a thesis project no later than the winter preceding the semester in which the project will be started.
The Honours Physics program in and beyond the third year requires a familiarity with computer programming and numerical analysis. In choosing electives for this program, the Department recommends that students supplement the prescribed program with the following courses Computer Science 2602 and 3731 (or Applied Mathematics 2130 and 3132). Mathematics 2051 and 3000 are also suitable electives. For specific courses and recommendations about electives, consultation with a faculty advisor in the Department is suggested.
The Department recommends that students wishing to complete the Honours Physics program in 120 credit hours follow the schedule given below. This schedule is intended for students who qualify for Physics 1050 and 1051. Other suggested course schedules are available from the Head of the Department.
### Recommended Course Schedule - Honours Physics Program

#### 7.9.4 Major in Environmental Physics

1. English 1080 and English 1110 (or equivalent)
2. Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031)
3. Mathematics 1000 and 1001
5. Physics 1050 (or 1020) and 1051
6. Physics 2053, 2055, 2750, 2820, 3220, 3820, 3300, 3340, 4340
7. Physics 3400 or 3500
8. Earth Sciences 1000, 1002, 2502, 3170, 3172
9. Geography 2102, 2195, 3120
10. Biology 2120, 2600

The Major degree offers students a fair degree of latitude in choosing electives; students are encouraged to take electives from Geography and Earth Sciences: of particular merit would be any of Earth Sciences 3600, 3611 or 4105.

#### 7.9.5 Honours in Environmental Physics

1. English 1080 and English 1110 (or equivalent)
2. Chemistry 1050 and 1051 (or Chemistry 1010, 1011, and 1031)
3. Mathematics 1000 and 1001
5. Physics 1050 (or 1020) and 1051
6. Physics 2053, 2055, 2750, 2820, 3220, 3300, 3340, 3820, 4205, 4300, 4340, 4820, 490A/B
7. Physics 3400 or 3500
8. Earth Sciences 1000, 1002, 2502, 3170 and 3172
9. Geography 2102, 2195, 3120
10. Biology 2120, 2600

An honours thesis is to be presented on work undertaken by the candidate under the guidance of a Department of Physics and Physical Oceanography faculty member. The thesis comprises the 6 credit hour course Physics 490A/B. Students should seek departmental advice regarding a thesis project no later than the winter preceding the semester in which the project will be started.

The Department recommends that students wishing to complete the Honours Environmental Physics program in 120 credit hours follow the schedule given below. This schedule is intended for students who qualify for Physics 1050 and 1051. Other suggested course schedules are available from the Head of the Department.

Those courses in which a grade of "B" or better or an average of 75% or higher are required, as specified in Clause 6.a. of the Regulations for the Honours Degree of Bachelor of Science, are 45 credit hours in Physics courses, and 15 credit hours in other courses (beyond the 1000 level) selected from the specified program courses in Earth Sciences, Geography and Biology.

Physics 1021 and the former Physics 1201 will be considered equivalent for prerequisite purposes. Physics 1051 and 2820 will be considered equivalent to the former Physics 1054 and 2054 for prerequisite purposes. Physics 1051 and the former Physics 1052 and 2050 will be considered equivalent for prerequisite purposes.

Not all courses are offered every year. Students should check with the Department prior to registration to plan programs.

7.10 Psychology

The following undergraduate programs are available in the Department.

1. Biochemistry and Psychology (Behavioural Neuroscience) Joint Honours (B.Sc. Hons. only)
2. Biochemistry (Nutrition) and Psychology (Behavioural Neuroscience) Joint Honours (B.Sc. Hons. only)
3. Biology and Psychology (Behavioural Neuroscience) Joint Honours (B.Sc. Hons. only)
4. Biology and Psychology Joint Honours (B.Sc. Hons. only)
5. Major and Honours in Behavioural Neuroscience (B.Sc. only)
6. Major and Honours in Behavioural Neuroscience (Co-operative) (B.Sc. Hons. only)
7. Major and Honours in Psychology (B.A. or B.Sc.)
8. Major and Honours in Psychology (Co-operative) (B.A. or B.Sc.)
9. Minor in Psychology (B.A. or B.Sc.)

Details of the joint honours programs are given under the Degree Regulations of the Faculty of Science. Psychology course descriptions are found at the end of the Faculty of Science section under Course Descriptions, Psychology.

7.10.1 Admission to Major Programs

Admission to the Major programs in the Department of Psychology is competitive and selective. Students who wish to enter these programs must submit a completed application form to the Psychology Department by June 1 for Fall semester registration and by October 1 for Winter semester. To be eligible for admission, students must have completed the 24 credit hours as listed below with an average of at least 65% in Psychology 1000/1001 and an overall average of at least 60% in Psychology, English, and Mathematics:

1. Psychology 1000, 1001
2. English 1080 and one of 1101, 1102, 1103, or 1110, or equivalent.
3. Mathematics 1000, or two of 1090, 1050, 1051 (or equivalent).
4. Six credit hours of electives (9 if only Mathematics 1000 is completed).

Students who fulfill the eligibility requirements compete for a limited number of available spaces. Selection is based on academic performance, normally cumulative average and performance in recent courses.

7.10.2 Admission to Honours Programs

The Honours programs in the Department of Psychology are designed for students who would like to concentrate their studies or pursue graduate work. Students who wish to be admitted to these programs must submit an “Application for Admission to Honours Program Faculties of Arts or Science” to the Psychology Department by June 1 for Fall semester registration and by October 1 for Winter semester. To be eligible for admission, students must have completed Psychology 2910, 2911, 2520, and 2570 and obtained in these courses a grade of “B" or better, or an average of 75% or higher. Students who fulfill the eligibility requirements compete for a limited number of available spaces. Selection is based on academic performance in the required courses. In special circumstances, students may be admitted to Honours Programs at times other than June and October.

Note: Students are advised to consult the general regulations for Honours in the Faculty of Arts or the Faculty of Science, as appropriate.

7.10.3 Requirements for a Major in Psychology

Students completing this program cannot receive credit for Psychology 2920.

1. Students may Major in Psychology as part of either a B.A. or a B.Sc. program. All Majors are required to complete a minimum of 42 credit hours of Psychology as listed below:
   a. Psychology 1000, 1001, 2520, 2570, 2910, 2911
   b. Twelve credit hours in Psychology chosen from the following: 3050, 3100, 3250, 3350, 3450, 3620, 3650, 3750, 3800 or 3801.
   c. Twelve credit hours of 4000-level courses in Psychology, of which at least one must be a research experience course and one must be a selected topics course.

2. Psychology Majors following the B.Sc. program are also required to complete the following:
   a. Mathematics 1000 (or equivalent).
   b. Biology 1001 and 1002
   c. Either Chemistry 1010 and 1011 (or 1050 and 1051); OR Physics 1020 (or 1050) and 1021 (or 1051)
   d. Six credit hours of laboratory courses at the 2000 level or above in one of Biology, Chemistry, or Physics.

   Note: Biology/Physics 3750 and Biology/Physics 4701 cannot be used to satisfy the requirement of 6 laboratory credit hours at the 2000 level or above in either Biology, Chemistry, or Physics.

3. Psychology Majors following the B.A. program are also required to complete Mathematics 1000 or two of 1090, 1050, 1051 (or equivalent), and are encouraged to complete at least 6 credit hours in Biology.

7.10.4 Requirements for Honours in Psychology

Students completing this program cannot receive credit for Psychology 2920.

1. Honours students in Psychology are required to complete the 60 credit hours of Psychology as listed below:
   a. Psychology 1000, 1001, 2520, 2570, 2910, 2911, 3900, 4910, 499A/B
   b. Eighteen credit hours chosen from the alternatives listed in Clause 1. b. of the requirements for a Major in Psychology
   c. Twelve credit hours of 4000-level courses in Psychology, of which at least one must be a research experience course and one must be a selected topics course.

2. Honours students must also complete the requirements listed in either Clause 2. or Clause 3., as applicable, of the requirements for a Major in Psychology.

3. Honours students will be required to submit in their graduating year, an undergraduate thesis (Psychology 499A/B) which demonstrates their competence in Experimental Psychology.

7.10.5 Requirements for a Major in Behavioural Neuroscience (B.Sc. Only)

Students completing this program cannot receive credit for Psychology 2920.

A program is offered in the Psychology Department to provide an education in Behavioural Neuroscience. Students wishing to enroll in the program are advised to consult with the Head of the Department at the earliest opportunity. Students who intend to pursue graduate studies should take courses leading to the Honours degree.

The program for a Major in Behavioural Neuroscience shall include:

1. a. Psychology 1000, 1001, 2520, 2570, 2910, 2911, 3800, 3801
   b. Six credit hours in Psychology chosen from the following: 3050, 3100, 3250, 3350, 3450, 3620, 3650, 3750.
   c. Six credit hours of 4000 level courses in Psychology, of which one must be a research experience course.

2. a. Mathematics 1000 (or equivalent) and 1001
   b. Chemistry 1010 and 1011 (or 1050 and 1051), and 2440 (or 2400/2401)
   c. Physics 1020 (or 1050) and 1021 (or 1051).
   d. Biology 1001 and 1002
   e. English 1080 and one of 1101, 1102, 1103, or 1110, or equivalent

3. Eighteen credit hours from the following courses chosen from at least two different sciences:
   b. Biology: 2060, 2210, 2250, 2900, 3050, 3160, 3202, 3295, 3401, 3500, 3530, 3540, 3750, 4200, 4241, 4245, 4250, 4402, the former 4450, 4601, 4605, 4701, the former 4900 (see note below)
   c. Chemistry: 2210, 2301 (or 2300) or any 3000 or 4000 level course
   d. Computer Science: Any 2000, 3000, or 4000 level course except 2650 and 2801
   e. Mathematics: 2000, 2050, 2051, 3000, 3001 or any 3000 or 4000 level pure or applied mathematics course
7.10.6 Requirements for Honours in Behavioural Neuroscience (B.Sc. Only)

Students completing this program cannot receive credit for Psychology 2920.
1. Honours students in Behavioural Neuroscience are required to complete the following Psychology courses: 1000, 1001, 2520, 2570, 2910, 2911, 3800, 3900, 3900, 499A/B, two further courses in Psychology chosen from the following: 3050, 3100, 3250, 3350, 3450, 3620, 3650, 3750; two 4000 level courses in Psychology of which one must be a research experience course.
2. Honours students in Behavioural Neuroscience must also complete the requirements listed in Clauses 2. and 3. of the requirements for a Major in Behavioural Neuroscience.
3. In accordance with Clause 6. a. of the Regulations for the Honours Degree of Bachelor of Science, Honours candidates must obtain a grade of “B” or better, OR an average of 75% or higher in all the required courses listed in Clauses 1. and 3. of the requirements for a major in Behavioural Neuroscience and Clause 1 of the requirements for honours in Behavioural Neuroscience, except those at the 1000 level.

7.10.7 Requirements for a Minor in Psychology

Students who Minor in Psychology are required to complete a minimum of 24 credit hours of Psychology as follows:

a. Psychology 1000, 1001, 2920
b. Fifteen other credit hours of Psychology.

7.10.8 Requirements for Major in Psychology (Co-operative) (B.A. or B.Sc.), and Major and Honours in Behavioural Neuroscience (Co-operative) (B.Sc. only)

Psychology Co-op Program (PCOP)
The Psychology Co-op Program (PCOP) is available to full-time Psychology (B.A. and B.Sc.) and Behavioural Neuroscience Majors and Honours students only.

The PCOP provides an opportunity for students to learn valuable practical skills while working in fields related to Psychology. Students complete three Work Terms, which consist of full-time paid employment. The timing of the Work Terms is such that employers stand to gain from the acquired skills of psychology majors in training. The objectives of the Work Term component of the PCOP are embodied in the Work Term Descriptions.

7.10.8.1 Admission Requirements

1. Admission is limited, competitive, and selective.
2. The primary criterion used in reaching decisions on applications for admission is overall academic achievement. Students with average overall academic records are unlikely to be admitted.
3. Students must first be admitted to the Psychology (B.A. or B.Sc.) or Behavioural Neuroscience Major.
4. To be eligible for admission, students must have completed a minimum of 30 credit hours with an overall average of at least 65%, and an average of at least 65% in all Psychology courses. Students must have a passing grade in all required courses, and must be registered for 15 additional credit hours in the semester in which they apply.
5. The deadline date for application is November 15.

7.10.8.2 Program of Study

1. In addition to the requirements below students must fulfill all requirements for either a Major in Psychology (B.A.), a Major in Psychology (B.Sc.), Major in Behavioural Neuroscience, Honours in Psychology (B.A.), Honours in Psychology (B.Sc.), or Honours in Behavioural Neuroscience. Courses in each program are normally taken in blocks as shown in the appropriate program table. Students should consult with a faculty advisor each semester regarding course selection.
2. Students’ status in the program is assessed at the end of each semester. To remain in PCOP, students must receive a passing grade in all required courses, and must maintain an average of at least 65% in all Psychology courses and a cumulative average of at least 65%. A student who fails a required course, fails to maintain an average of 65% in Psychology courses, or fails to maintain a cumulative average of 65%, will be required to withdraw from PCOP. The student in question may apply for readmission in a subsequent year after passing the specified required course(s) previously failed, or re-establishing the required average.
3. Students are required to complete three work terms at the prescribed times.

7.10.8.3 Work Term Placement

1. General management of the work terms in PCOP is the responsibility of the Division of Co-operative Education (DCE). It is responsible for assisting potential employers to become involved in the program, organizing competitions for Work Term employment, arranging student-employer interviews and facilities, data base management, and for the continual development of employment opportunities. A program co-ordinator from the DCE will work with the department to counsel students, visit students on their work assignments and evaluate the work term.
2. Work placement is not guaranteed but every effort is made to ensure that appropriate employment is made available. In the case of students who are required to withdraw from the program, the DCE has no responsibility for placement until they have been re-admitted to the program.
3. A student who applies for admission to the co-op program gives permission to the University to provide a copy of the applicant’s resume, university transcript and work term evaluations to potential employers.
4. A student who has been accepted to PCOP may obtain his/her own work term placement outside the competition. Such employment positions must be confirmed by the employer, and must be approved by the Co-ordinator.
5. Students are expected to submit to the Co-ordinator, within a month from starting a Work Term, a plan of the intended work that term.
6. Salaries paid to co-operative students are determined by employers based on their internal wage structures. However, students
should not expect the income from work terms to make them completely self-supporting.

7.10.8.4 Registration and Evaluation of Performance
1. In Work Terms I, II, and III, students must register for Psychology 199W, 299W, and 399W respectively.
2. Student performance evaluations are to be completed by the employer and returned to the Co-ordinator. The Work Term evaluations shall consist of two components:
   a. On-the-job Student Performance: Job performance shall be assessed by the Co-ordinator in consultation with the Department using information gathered during the Work Term and input from the employer towards the end of the Work Term. Formal written documentation from the employer shall be sought. Evaluation of the job performance will result in one of the following classifications: PASS WITH DISTINCTION, PASS, FAIL.
   b. The Work Report
      i. Students are required to submit a Work Term report to the Co-ordinator on the first day of final exams.
      ii. Work Term reports shall be evaluated by a faculty member and the Co-ordinator.
      iii. If an employer designates a report to be of a confidential nature, both employer and the Co-ordinator must agree as to the methods to protect the confidentiality of such a report before the report may be accepted for evaluation.
      iv. Reports must contain original work related to the Work Term placement. The topic must relate to the work experience and will be chosen by the student in consultation with the employer. The topic must be approved by the Co-ordinator or a faculty member of the Department of Psychology.

   Evaluation of the work term report will result in one of the following classifications: PASS WITH DISTINCTION, PASS, FAIL.

   The evaluation of the job performance and the work term report are recorded separately on the transcript. Overall evaluation of the work term will result in one of the following final grades being awarded:
   • Pass with Distinction: Indicates OUTSTANDING PERFORMANCE in both the work report and the job performance.
   • Pass: Indicates that PERFORMANCE MEETS EXPECTATIONS in both the work report and the job performance.
   • Fail: Indicates FAILING PERFORMANCE in the work report or the job performance, or both.

   To remain in PCOP, a student must obtain a final grade of PAS.

3. If a student fails to achieve the Work Term standards specified above, the student will be required to withdraw from PCOP. Such a student may reapply to the program, at which time the student will be required to repeat the Work Term with satisfactory performance. Only one Work Term may be repeated in the entire program.

4. In order to be considered for readmission, students must formally apply for readmission to the program not later than the deadline date specified in Admission Requirements.

5. A student who withdraws from a Work Term without acceptable cause subsequent to a job placement will be required to withdraw permanently from PCOP.

6. Students who drop a Work Term without prior approval from both the Co-ordinator and the Head of the Department of Psychology, or who fail to honour an agreement to work with an employer, or conduct themselves in such a manner as to cause their discharge from the job, will be awarded an overall grade of FAL for the Work Term in question and will be required to withdraw permanently from PCOP.

7. Permission to drop a Work Term does not constitute a waiver of degree requirements, and students who have obtained such permission must complete an approved Work Term in lieu of the one dropped.
### 7.10.9 Suggested Course Sequences

The tables below show suggested course sequences for (1) **B.A. in Psychology (Co-operative)**, (2) **B.Sc. in Psychology (Co-operative)**, (3) **B.A. Honours in Psychology (Co-operative)**, (4) **B.Sc. Honours in Psychology (Co-operative)**, (5) **B.Sc. in Behavioural Neuroscience (Co-operative)**, and (6) **B.Sc. Honours in Behavioural Neuroscience (Co-operative)**.

*Students registered in Chemistry 1050 must also be registered in Mathematics 1000 (not 1090).  
**or Mathematics 1000 (Semester 1) and Mathematics 1001 (Semester 2).  
***or Chemistry 2400/2401  
****Students registered in Physics 1050 must also be registered in Mathematics 1000 (not 1090).  
*****BHNR Requirement 1-6 refers to the requirement specified in clause 3, Requirements for a Major in Behavioural Neuroscience (B.Sc. Only). |
admission to this course.
CR: the former BIOC 2430
LC: 4
PR: Level 3 Chemistry or Chemistry 1010 or Chemistry 1810 or equivalent, and acceptance to Bachelor of Nursing (Collaborative)
UL: may not be used for credit to fulfill the requirements for a major in the Department of Biochemistry

2000 Principles of Food Science enables one to gain an understanding of the scope of Food Science as a discipline. Topics include introduction to chemistry, processing, analysis, microbiology, packaging, product development, sensory evaluation and quality control as they are related to Food Science.

2005, Food, Safety, and Health introduces the concepts of the composition of foods, and how the processing of food affects sensory appeal, shelf life and nutrient composition. Common food and water-borne illnesses (including food poisoning) are covered in the course content. Students will also be introduced to food biotechnologies, including genetically modified organisms, nutriceuticals and the development of functional foods.

2010 Introductory Foods I - inactive course.

2011 Introductory Foods II - inactive course.

2100 Introduction to Molecular Biology and Genetics will cover the heritability of simple traits from phenotype to genotype; the discovery of DNA as the molecule of heredity; the structure and function of DNA; the elucidation of the genetic code; and the manipulation of DNA for recombinant DNA technology and biotechnology.

CO: BIOC 2101, Chemistry 2401, Physics 1021 or 1051. Students may replace the co-requisite Chemistry 2401 with Chemistry 2440 as a prerequisite. Chemistry 2440 may not be taken as a co-requisite of 2100

LH: 3 on alternate weeks
PR: BIOC 2101, Chemistry 2401, Physics 1021 or 1051. Students may replace the co-requisite Chemistry 2401 with Chemistry 2440 as a prerequisite. Chemistry 2440 may not be taken as a co-requisite of 2100

2101 Introduction to Biochemistry is an introduction to the major organic substances of living organisms, proteins, carbohydrates and lipids: their structure, analysis and biochemical function. Other topics will include: enzymes; an overview of the chemistry of membranes, including the plasma membrane and specialized intracellular membranes; and the biochemistry of selected differentiated cells.

CR: Pharmacy 2004, or the former Pharmacy 3110
LC: one-three hour laboratory period on alternate weeks
PR: Chemistry 2400 and 2401, or Chemistry 2440; and Physics 1020 or 1050, and 1021 (or 1051). Chemistry 2401 and Physics 1021 or 1051 can be done concurrently

2500 Introduction to Human Nutrition (same as HKR 2600) gives an overview of human nutrition with an emphasis on topics of current interest. Students will gain an understanding of nutrition in the context of health maintenance across the life span. Topics covered will include nutrition during pregnancy, nutrition for infants, Canadian Recommended Nutrient Intakes / Dietary Reference Intakes, weight loss and weight gain, nutriceuticals and ergogenic aids.

CR: HKR 2600 or the former Kinesiology 2600
CR: cannot receive credit for BIOC 2600 if completed subsequent to BIOC 3200 or 3201
UL: BIOC 2600 may not be counted among the 60 credit hours in Biochemistry courses required for Honours in Biochemistry, Honours in Dietetics

3052 Food Microbiology - inactive course.

3054 Fundamentals of Food Microbiology - inactive course.

3105 Physical Biochemistry examines topics such as: types of intermolecular forces in biomolecules; the folding of biomolecules and the role of disulfide bonds, and isomerisation of biomolecules; thermodynamic equilibria, coupled reactions, transport across membranes and redox reactions; and ligand binding. Other topics will include: size and shape of biomolecules; isotopes in biochemistry; and, spectroscopy of biomolecules.

CR: a two-hour problem-solving class
PR: BIOC 2101; and Chemistry 2300 or 2301 or Physics 2053

3106 Metabolism examines the catabolism of carbohydrates, lipids and amino acids. Other topics will be: mitochondria, chloroplasts and ATP synthesis; biosynthesis of carbohydrates and lipids; metabolic specialization of differentiated cells and tissues; and, integration of metabolism.

CR: the former BIOC 3102 or Pharmacy 3111
LC: one-three hour laboratory or one-hour tutorial per week
OR: one-hour tutorial or one-three hour laboratory per week
PR: BIOC 2101; and Chemistry 2301 (or Chemistry 2300) or Physics 2053

3107 Nucleic Acid Biochemistry and Molecular Biology examines the structure, function and biochemistry of DNA and RNA and the biochemical processes involved in the flow of information from the gene to protein. These will include: DNA replication, recombination and repair processes; transcription of RNA and RNA splicing; and protein synthesis. The regulation of gene expression will also be covered at an introductory level. The course will also include an introduction to cloning technology.

LH: up to four hours per week which will normally consist of one three hour laboratory period plus one additional hour on the following day.
PR: BIOC 2101; and BIOC 2100 or Biology 2250

3108 Molecular Biochemistry of the Cell focuses on the molecular biochemistry of intracellular regulation, including advances in topics such as signal transduction, apoptosis and cancer. Other topics will include protein processing and sorting, cyclins, G-protein structure, function and regulation, cell adhesion molecules and the structure of the extracellular matrix.

PR: BIOC 2100 or Biology 2250; and BIOC 2101

311A/B Human Physiology - inactive course.

3200 Basic Human Nutrition I studies the nutrients essential to human health and well-being with emphasis on carbohydrates, proteins and lipids, - chemotherapy, dietary, and, physiological function. Students may not be taken as a co-requisite of science.

CR: BIOC 3106 or Pharmacy 3111
PR: BIOC 3106 or Pharmacy 3111

3201 Basic Human Nutrition II studies the vitamins, minerals and trace elements essential to human health and well-being - chemistry, dietary, and physiological role, and deficiency syndromes.

CR: BIOC 3106 or Pharmacy 3111
PR: BIOC 3106 or Pharmacy 3111

3202 Community Nutrition examines nutritional assessment, nutrition education, and the role of community agencies and individuals in the dissemination of nutritional information. Survey methods and results will be discussed.

CR: BIOC 3201, and either BIOC 311B or Medicine 310B
PR: the former BIOC 4302
UL: BIOC 3201, and either BIOC 311B or Medicine 310B

3402 Food Chemistry examines the following topics: water structure and the role of water in chemical reactions and mechanical properties of foods; chemistry and physical properties of carbohydrates, proteins and lipids; food dispersions; pigments and natural colorants; food flavour, enzyme properties and applications; food chemistry and physical properties of biomolecules; enzymes of tissue, milk, eggs, bread and edible plant tissue; food additives; and, chemical changes in foods during processing.

CR: a two to three hours per week, together with assigned reading and case studies
PR: BIOC 2100 or Biology 2250; BIOC 3106

4002 Biochemical Regulation examines metabolic regulation at the cellular and multicellular level. Topics will include: control theory; hormones; their biosynthesis and mechanism of action; signal transduction; and, endocrine control. Regulation of metabolic processes. Principles will be illustrated by the use of case studies from the medical and veterinary literature.

LC: two to three hours per week, together with assigned reading and case studies
PR: BIOC 2100 or Biology 2250; BIOC 3106

4101 Proteins will review the history of protein research and the general properties of proteins and include other topics such as: strategy and methods for purification; chemical structure, properties, modification and determination of the protein amino acids; sequencing strategy, chain cleavage methods and end group analysis; folding of the protein main chain and techniques to determine structure; and, the relationship between structure and function: protein films, motors and regulators. It will also cover disease-related proteins and other examples from the current literature.

CR: a two to three hours per week, together with assigned reading
PR: BIOC 3105

4102 Current Topics in Biochemistry is a seminar course in which faculty and students will discuss topics of current interest in the biochemistry literature. Students will be responsible for reading and critically assessing recent literature.
PR: Honours Biochemistry students in their final year or permission of the Head

4103 Prokaryotic Gene Regulation is a detailed and up-to-date treatment of the mechanisms of genetic regulation found in bacterial cells. The course will develop topics based on the evidence of bacterial genetics and modern molecular biological experiments. Topics may include: theory of mutations, RNA transcription, positive and negative regulation of transcription; regulation of protein synthesis; control of DNA replication; bacterial operons and regulons; developmental molecular biology in bacterial systems; and evolution and molecular biology of organelles.
PR: BIOC 3107
4104 Eukaryotic Gene Regulation and Developmental Biology details the cellular and molecular aspects of eukaryotic gene regulation and development. Topics to be covered will include the DNA content and organization of eukaryotes, mechanisms controlling the expression of eukaryotic genetic information at the transcriptional and post-transcriptional levels, and the methodologies used to define these mechanisms. Detailed consideration will be given to the cell-surface events which regulate nuclear gene expression and cell lineage specification. Developmental mechanisms operating in a number of model systems will be discussed.

PR: BIOC 3107 or 3108

4105 Immunology (same as Pharmacy 4105) is taught and administered by the School of Pharmacy. The course is an introduction to the molecular and cellular basis of immunity and hypersensitivity, and will include a discussion of the manipulation of the immune system in the management and treatment of disease.

CO: BIOC 2101, and either BIOC 311B or Medicine 310B
CR: Pharmacy 4105 and the former Pharmacy 3105
OR: tutorials
PR: BIOC 2101, and either BIOC 311B or Medicine 310B

4200 Bioenergetics and Biological Oxidation examines topics such as: respiration and electron transport; the functional organization of energy transduction, exobionts; the structure and function of flavoenzymes, cytochromes, iron-sulfur proteins and quinones; enzyme reduction of oxygen; and, free radicals in biological systems.

LC: two to three hours per week and assigned reading
PR: BIOC 3106

4201 Membranes - Structure and Function examines the structure of model and biological membranes, the molecular interactions between membrane components and the effects of these interactions on the biophysical and functional properties of membranes. Other topics will include the structure-function of specialized membranous systems, such as lipoprotein, lung surfactant, and lipid rafts; membrane lipid composition in biochemical adaptation and function; and the role of membrane proteins in intracellular trafficking, receptor function, enzymatic activity and membrane-related diseases.

PR: BIOC 3105

4210 Biochemical Research Techniques I examines the proteome and the genome. This course is designed to familiarize students with current methodology employed in the analyses of the complements of proteins and genes resident in eukaryotic cells. Emphasis will be placed on techniques that facilitate the simultaneous functional analyses of large numbers of proteins or genes. A variety of techniques, used in the study of expression and functional proteomics, will be described, including 2D PAGE, tagged proteins, fluorophores, mass spectrometry and protein microarrays. Techniques used in the study of gene expression and functional genomics will also be described, including the use of reporter gene constructs, analysis of protein-DNA interactions, expressions of cloned genes and several experimental approaches used to define the eukaryotic transcriptome.

AR: attendance is required
PR: BIOC 3105

4211 Biochemical Research Techniques II is designed to familiarize students with methods used for the study of cellular and subcellular metabolism. This course may include a research project.

AR: attendance is required
LC: times as arranged
LH: times as arranged
PR: BIOC 3106

4220 Introduction to General and Autonomic Pharmacology (same as Medicine 4300) deals with the general principles of pharmacology (dose-response relationship, drug-receptor interaction, absorption, distribution, metabolism and excretion of drugs), and drugs that affect neuromuscular and autonomic neurotransmission, the cardiovascular, gastrointestinal, and central nervous systems, and autacoids/prostanoids.

CO: BIOC 3106 or Pharmacy 3111
CR: Medicine 4300
LH: 3
PR: BIOC 311A/B or Medicine 310A/B or Pharmacy 2002/2003 (or the former Pharmacy 3091, 3092)

4230-4239 Special Topics in Biochemistry will be given for senior undergraduates, and will cover a range of topics in specialized fields in Biochemistry. They may be taught by visiting specialists when available.

PR: to be determined at the time of offering

4240 Nutrigenetics and Nutrigenomics is designed to familiarize students with emerging discoveries in the area of diet-gene interaction and to further their understanding of the relationships between the genome and diet as well as the potential design and personalization of diets for better health. Students will develop an appreciation for the role of nutrients in the prevention and/or development of disease.

PR: BIOC 2100, 3106 and 3200

8.2 Biology

According to the nature of particular courses, the specified number of laboratory hours may consist of some combination of laboratory work, seminars or directed independent study relevant to the practical aspects of the subject matter.

Biology courses are designated by BIOL.

1001 Principles of Biology is an introduction to the science of Biology, including a discussion of the unity, diversity and evolution of living organisms.

LH: 3
UL: credit may be obtained for only 6 1000-level credit hours in Biology

1002 Principles of Biology is an introduction to the science of Biology, including a discussion of the unity, diversity and evolution of living organisms.

LH: 3
PR: BIOL 1001
UL: credit may be obtained for only 6 1000-level credit hours in Biology

2010 Biology of Plants is a study of the structure, function and reproductive biology of plants, with emphasis on the vascular plants, and on their relationship to environment and human activities.

LH: 3
PR: BIOL 1001 and 1002; Chemistry 1010 or 1050 (or the former Chemistry 1000)

2040 Modern Biology and Human Society I examines various aspects of the human body, and the implications of modern biological research for human beings. Topics include cancer; diet and nutrition and associated diseases; circulatory disease, immunity, human genetics, birth defects, new diseases, genetic engineering and reproductive engineering.

OR: seminars
UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Biology

2041 Modern Biology and Human Society II examines the origins and consequences of the environmental crisis of the 20th century. Topics include the population explosion, energy, material cycles, air and water and land pollution, global food supplies, the fisheries, wildlands, renewable and non-renewable resources, environmental ethics.

OR: seminars
UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Biology.
Honours programs in Biology

2060 Principles of Cell Biology is a modern view of the biology of eukaryotic cells, organelles and molecules and their interactions in the functioning of living organisms.
CO: Physics 1021 or 1051; Biochemistry 2101
CR: the former BIOL 3060
LH: 3
PR: Physics 1021 or 1051; Biochemistry 2101
PR: BIOL 1001, 1002 and 2250; Chemistry 2440 or 2400

2120 Biology for Students of Earth Sciences is an introduction of the principles of biology for students in Earth Sciences. Topics will include principles of classification, levels of biological organization, fundamental characteristics of living organisms and basic concepts in ecology.
CR: BIOL 1001 or 1002
LH: 3
PR: Earth Science major; Earth Sciences 1001 or 1002 or permission of the Head of Department.
UL: may not be used for credit by Biology Majors or Minors

2122 Biology of Invertebrates is a study of the invertebrates with emphasis on structure and function, adaptations and life histories. The laboratories will present a broad survey of the major invertebrate groups.
CR: the former BIOL 3122
LH: 3
PR: BIOL 1001 and 1002

2110 Biology of Vertebrates is a study of the vertebrates, with emphasis on structure and function, adaptations and life histories.
CR: the former BIOL 3210
LH: 3
PR: BIOL 1001 and 1002

2250 Principles of Genetics is an introduction to Mendelian and molecular genetics. Phenotype and genotype, behaviour of alleles in genetic crosses, chromosome theory of inheritance, genetic linkage, molecular biology of DNA, RNA and protein, molecular basis of mutation, recombinant DNA, applications of genetic biotechnology.
CO: Chemistry 2440 or 2400
CR: the former BIOL 3250
LH: 3
PR: BIOL 1001 and 1002; Chemistry 1010 and 1011 (or 1050/1051)
PR: Chemistry 2440 or 2400

2600 Principles of Ecology is a conceptual course introducing the principles of ecology, including theoretical, functional and empirical approaches.
CR: the former BIOL 3600
LH: 3
PR: BIOL 1001 and 1002

2900 Principles of Evolution and Systematics is an introduction to the processes and patterns of evolution, and the principles of classification. Natural selection and other microevolutionary processes, variation and adaptation, species and speciation, phylogenetic systematics, reconstruction of phylogeny, macro-evolutionary patterns in the fossil record and their interpretation.
CO: Statistics 2550 (or equivalent)
CR: the former BIOL 3900
LH: 3
PR: BIOL 1001, 1002 and 2250
PR: Statistics 2550 (or equivalent)

3041 Boreal Flora covers the identification of the terrestrial vascular plants of Newfoundland and Labrador. Various aspects of floral biology, and the use of dichotomous keys will also be covered.
CR: Environmental Science 3110
LH: 3
PR: BIOL 1001 and 1002

3050 Introduction to Microbiology is a course in which the basic principles underlying microbial life are studied. Aspects include structure, function, bioenergetics and growth with an emphasis on prokaryotes. Also studied are viruses, microbial diseases, introductory principles of immunology and the control of microorganisms. The laboratory sessions provide training in culture and determinative techniques using microorganisms.
CO: Chemistry 2401
LH: 3
PR: BIOL 1001 and 1002

3052 Food Microbiology - inactive course.

3053 Microbiology for Nurses examines the fundamentals of microbiology with an emphasis on medical microbiology. The course will include topics such as: host responses to infections, human diseases caused by microorganisms, and the control and exploitation of microorganisms.
LH: 2
PR: students admitted to the Bachelor of Nursing (Collaborative) program
UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Biology, nor is it acceptable for any of the joint programs between Biology and other disciplines

3160 Insect Morphology and Physiology - inactive course.

3202 Comparative Vertebrate Anatomy examines the phylogenet development and comparative anatomy of the vertebrates.
CR: the former BIOL 3200 or the former BIOL 3201
LH: 3
PR: BIOL 1001 and 1002

3295 Population and Evolutionary Ecology is an introduction to the theory and principles of evolutionary ecology and population dynamics.
CR: the former BIOL 4290
LH: 3
PR: BIOL 2600; at least one of BIOL 2010, 2122 or 2210

3300 Introductory Entomology is a study of the classification and ecology of insects within an evolutionary framework. Topics will include molecular biological and classical morphological issues surrounding insect taxonomy, evolutionary based higher systematics, and the ecological roles of insects in a variety of ecosystems.
CR: BIOL 4150 and the former BIOL 4140
LH: 3
PR: BIOL 2600. It is recommended that students have completed BIOL 2900.

3401 Comparative Animal Physiology is a comparative study of the basic physiological processes, with special attention paid to those strategies involved by animals which enable them to adapt to environmental changes.
CO: Biochemistry 3106
CR: the former BIOL 4401
LH: 3
PR: BIOL 2060 and 2210
PR: Biochemistry 3106

3402 Principles of Plant Physiology is a consideration of the principles of plant physiology, including water relations, nutrition, metabolism, growth and development.
CO: Biochemistry 3106
CR: the former BIOL 4403
LH: 3
PR: BIOL 2010 and 2060
PR: Biochemistry 3106

3500 Histology is a study of microstructure and ultrastructure of tissues and organs in vertebrates, particularly mammals, with emphasis on correlating structure and function.
LH: 3
PR: BIOL 2060 and 2210

3530 Molecular and Developmental Biology is a study of developmental model systems with a focus on the underlying principles and molecular mechanisms involved in embryogenesis, organogenesis, morphogenesis, cellular differentiation, growth and regeneration in animals (vertebrates and invertebrates) and plants. Current cellular and molecular biology techniques and the implications of developmental biology in modern biological and health research will be emphasized.
LH: 3
PR: BIOL 2060 and BIOL 2250 or Biochemistry 2100

3540 Histotechnique - inactive course.

3610 Boreal Ecology is a study of the principal features of terrestrial ecosystems, with emphasis on the boreal region. This course may be offered in a usual 13 week semester or as a two-week field course.
CR: Environmental Science 3131
LC: either three hours of lecture and three hours of laboratory per week or a two week field course that embodies equivalent instructional time
LR: three hours of lecture and three hours of laboratory per week or a two week field course that embodies equivalent instructional time
PR: BIOL 2100, 2250, 2600 and 2900; Statistics 2550 or equivalent

3620 Aquatic Microbial Ecology is a study of the nature, distribution and activities of microorganisms in the freshwater and marine environments. The field and laboratory work illustrate some of the investigative techniques used in this area of study.
CR: the former BIOL 3603
LH: 3
PR: BIOL 2600 and 3050; Statistics 2550 or equivalent

3709 Field Course in Marine Principles and Techniques begins with a two-week field school immediately prior to the beginning of the Fall Semester. In the Fall Semester there are follow-up lectures, readings and submission of reports. The course is designed to introduce the principal marine environments, organisms and techniques. It is strongly recommended that this course be taken before either BIOL 3710, 3711 or 4810.
PR: BIOL 2600; Statistics 2550 or equivalent and permission of the Head of Department

AR = Attendance requirement; CH = Credit hours are 3 unless otherwise noted; CO = Co-requisite(s); CR = Credit can be retained for only one course from the set(s) consisting of the course being described and the course(s) listed; LC = Lecture hours per week are 3 unless otherwise noted; LH = Laboratory hours per week; OR = Other requirements of the course such as tutorials, practical sessions, or seminars; PR = Prerequisite(s); UL = Usage limitation(s).
3710 Biological Oceanography is an introductory course in biotic and abiotic factors controlling marine biomass and primary production, emphasizing plankton and fishes. It introduces students to major groups of marine phytoplankton, zooplankton, and fishes, emphasizing how the physical, chemical, and geological environments interact with biology to define processes and pattern in marine organisms. 

LC: either three hours of lecture and three hours of laboratory per week or a two-week field course that embodies equivalent instructional time

LH: either three hours of lecture and three hours of laboratory per week or a two-week field course that embodies equivalent instructional time

PR: BIOL 2122 and 2600

3711 Principles of Marine Biology is an introductory course in biology of the oceans. Introduces students to marine habitats and the organisms that inhabit them, emphasizing functional morphology, physiology, biodiversity, phylogeny, and ecology. Also includes introduction to marine biogeography, conservation, marine fishes and pollution.

LC: either three hours of lecture and three hours of laboratory per week or a two-week field course that embodies equivalent instructional time

LH: either three hours of lecture and three hours of laboratory per week or a two-week field course that embodies equivalent instructional time

PR: BIOL 2122, BIOL 2600

3712 Benthic Biology examines the biology of the aquatic benthos (bottom-dwelling organisms); their origins, adaptations, life histories and ecological roles. This course may be offered in a usual 13 week semester or as a two-week field course.

CR: the former Biology 3630

LC: either three hours of lecture and three hours of laboratory per week or a two-week field course that embodies equivalent instructional time

LH: either three hours of lecture and three hours of laboratory per week or a two-week field course that embodies equivalent instructional time

PR: BIOL 2600

3750 Animal Behaviour I is an introduction to the mechanisms, development, function and evolution of behaviour in animals. Topics include the history of ethology and comparative psychology, and behavioural ecology; methods of animal behaviour study, behaviour of animals in relation to physiology, learning, communication, mating systems, and other areas in Biology and Psychology.

CR: Psychology 3750

PR: BIOL 1001 and 1002; Statistics 2550 or equivalent

3811 Paleontology (W) (same as Earth Sciences 3811) is taught and administered by the Department of Earth Sciences.

CR: Earth Sciences 3811, the former BIOL 3800, and the former Earth Sciences 3801

PR: either Earth Sciences 1002 and BIOL 2120 (or BIOL 1001 and 1002); or BIOL 2122 and 2210

3950 Research Methods in Genetic Biotechnology (same as the former BIOL 4900) will include DNA extraction, DNA amplification by the Polymerase Chain Reaction (PCR), DNA cloning, DNA sequence analysis and Bioinformatics. Additional modules in gene expression and re-sequencing chip technologies may be included. Theory and methods will be introduced in a research framework.

CR: the former BIOL 4900

LH: Three hours of lecture and three hours of laboratory per week or a three week on-campus course that embodies equivalent instructor time

PR: BIOL 2060 and 2250

4000 Bacterial Systematics is a study of bacterial classification, nomenclature and identification. Subjects include classical and numerical taxonomy, aerobic and anaerobic culture techniques, phage typing, serotyping and the significance of genetic relatedness. The laboratory work presents the techniques of determinative bacteriology.

LH: 3

PR: BIOL 2250 and 3050

4012 Phycology - inactive course.

4014 Biology and Ecology of Boreal and Arctic Seaweeds is a field course examination of seaweed biology and ecology with special study of living specimens in estuarine, fjordic and exposed coastal sites, demonstrating their physiological and ecological adaptations to cold-water habitats. The course is offered at the Bonne Bay Marine Station during the Summer Semester with two weeks of instruction followed by a week to complete course requirements.

PR: BIOL 2600 or equivalent

4040 Mycology is a study of the physiology, morphogenesis, nature of plant and animal parasitism, ecology and taxonomy of terrestrial and freshwater fungi.

CR: the former BIOL 3020

LH: 3

PR: BIOL 2060 and 3050

4122 Advanced Topics in Marine Invertebrates provides an in-depth examination of physiological, ecological and behavioural adaptations in marine invertebrates. Lectures will be combined with discussions of relevant papers from the primary literature on topics of current interest, which may relate to functional morphology, ecology, evolution and natural history. Students will also gain practical research experience through the study of live and preserved animals.

LH: 3

PR: BIOL 2122, 2600 and 2900

4141 Nematology is a study of plant parasitic, insect parasitic and free-living marine, freshwater and terrestrial nematodes, with emphasis on taxonomy, biology, economic importance, control methodologies and environmental applications.

LH: 3

PR: BIOL 2120, 2122 and 2600

4150 Insect Systematics and Ecology - inactive course.

4180 General Parasitology is an examination of parasitism as a way of life, with emphasis on classification, structural adaptation, life cycles and ecology.

LH: 3

PR: BIOL 2122, 2210 and 2600

4182 Fisheries and Wildlife Parasitology is a study of the important parasites of fish and other wildlife and their impact on both individuals and populations.

LH: 3

PR: BIOL 4180

4200 Immunology is a study of vertebrate and invertebrate immune systems including antigens and antibodies and their reactions.

LH: 3

PR: BIOL 2060 and BIOL 3050

4241 Advanced Genetics has advanced topics in modern genetic analysis, including regulation of gene expression, developmental genetics, molecular basis of inherited disease, genomics, immunogenetics, behavioural genetics, and molecular evolution.

LH: 3

PR: BIOL 2250 and Biochemistry 2101

4245 Biophysics is an examination of the physical properties involved in defining diffusion, membrane properties, electrochemical potentials and the processes of bioenergetics within cells and organelles. Selected topics in biomechanics and the functioning of whole organisms with respect to size, shape, support, orientation, transport and motility.

LH: 3

PR: BIOL 2060 and Biochemistry 2101

4250 Evolutionary Genetics has advanced topics in the study of micro and macro-evolutionary phenomena. Genetic variation in natural populations; theory of genetic drift, mutation, migration, inbreeding, and natural selection; neutral theory of molecular evolution, patterns of nucleotide substitution, heritability and quantitative genetics.

LH: 3

PR: BIOL 2250 and 2900

4251 Genomics will have lecture, seminar, and laboratory components. Topics covered will include Technical Foundations of Genomics, Global Gene Expression Profiling, Bioinformatics, Comparative Genomics, Microbial Genomics, Genomics and Medicine, Genomics and Agriculture, Environmental Genomics, and Ethical Issues of Genomics. Each topic will involve a lecture component, in which theory and methods will be taught using the textbook and journal articles. Some lecture and lab times will be devoted to seminars on methods and papers related to lecture or laboratory components of the course. In the lab component, students will have the opportunity to use state-of-the-art genomic techniques to address a research question.

LH: 3

OR: seminar

PR: BIOL 2060, 2250

4255 Proteomics is the study of the proteome, the complete set of proteins produced by a species, using the technologies of large-scale protein separation and identification. Proteomics describes how proteins are modified, when and where they are expressed, how they are involved in metabolic pathways and how they interact with one another. Topics covered will include Technical Foundations of Proteomics, Global Functional Protein Expression Profiling, Experimental Bioinformatics, Comparative Proteomics, Posttranslational Modification-Specific Proteomics, Proteomics in Medicine, Agriculture, Environmental Proteomics and Proteomics for Quality and Safety of Food.

LH: 3
470 History of Biology - inactive course.

4306 Applied Biology is an examination of how biological and other sciences are applied to the problems of management and utilization of organisms at both the individual and systems level to meet human needs. CR: the former BIOL 4303 or the former BIOL 4304 PR: BIOL 2060, 2250, 2600, 2900 and one of BIOL 2010, 2122 or 2210

4360 Community and Ecosystem Ecology is a study of the basic principles, patterns and processes of ecological communities and ecosystems. OR: a seminar/discussion group each week PR: BIOL 2250, 2600 and 2900 and one of BIOL 2010, 2122 or 2210; Statistics 2550 or equivalent

4402 Electron Microscopy in Life Sciences - inactive course.

4404 Microbial Physiology is a study of the structure and growth of microorganisms. Themes covered in this course include the structure, function and regulation of the microbial cellular machinery, the hierarchical regulation of cellular activities, and communication between cells. Quantitative experimental methodology relating to microbial physiology is studied in the laboratory. CR: the former BIOL 4170 PR: BIOL 2250 and 3050; Biochemistry 3106

4405 Landscape Ecology is an introduction to the theory and principles of landscape pattern and processes, including issues related to scale, networks, landform and vegetation patterns, species distributions, and natural and human-caused aspects of landscape change. CO: Statistics 2550 or equivalent LH: 3 PR: Statistics 2550 or equivalent PR: BIOL 2600 and 18 credit hours in Biology or permission from the course instructor

4505 Systematics and Biogeography is a study of the geographical distributions of plants and animals with particular reference to temporal and spatial variability and to theories advanced to explain historical and recent distribution patterns. CR: the former Geography 4170 PR: BIOL 2250, 2600, 2900 and one of BIOL 2010, 2122 or 2210

4510 Distribution Patterns in the Sea - inactive course.

4550 Principles of Endocrinology comprises an introduction to basic concepts concerned with how chemical messages are transmitted and received between cells to coordinate body functions. Hormonal control of adaption, reproduction, metabolism, growth, digestion, and electrolyte homeostasis will be discussed. Although the endocrinology of invertebrates will be mentioned as appropriate, the main emphasis will be on mammalian and human endocrinology at the level of the whole organism. CR: BIOL 3401; Biochemistry 3106

4600 Ecology and Evolution of Fishes examines the evolutionary history and ecology of the world’s fishes, with particular emphasis on those of ecological, economical and cultural importance to Eastern Canada. Topics will include taxonomy, life histories, behaviour, zoogeography, evolutionary ecology, population biology, contemporary evolution, and conservation biology. CR: BIOL 2210 and 2600

4601 Functional Biology of Fish is an introduction to anatomical, physiological and cellular aspects of selected processes in the life cycle of fishes. PR: BIOL 2060, 2210, and 3401

4605 Quantitative Methods in Biology (same as Statistics 4581 and the former Statistics 4505) is quantitative reasoning using verbal, graphical and statistical models of scaled quantities (units and dimensions). Exploratory and confirmatory analysis of field and laboratory data. Hypothesis testing, including randomization tests. Topics include the general linear model (t-tests, anova etc), correlation, autocorrelation, geographic statistics, estimates of population size and multivariate methods. CR: Statistics 4581 and the former Statistics 4605 PR: Statistics 2550 LH: 3

4620 Ornithology examines structure, classification, evolution, ecology and behaviour of birds, with particular reference to those of economic importance. Identification of the birds of Eastern Canada. CR: BIOL 2210 and 2600

4630 Mammalogy examines evolution, systematics, life histories and distribution of mammals, with particular emphasis on eastern North American forms. CR: BIOL 2210 and 2600

4650 Conservation Biology I: Conservation in Biology and Geography is an examination of how biological and geographical principles can be applied to conserving biological diversity in the natural world under conditions of exploitation and habitat loss. Special emphasis will be given to relevant provincial examples. CR: Environmental Science 4133 OR: 3 hours of seminar/discussion group each week PR: 30 credit hours in either Biology or Geography

4651 Conservation Biology II: Conservation in Practice examines issues relevant to global conservation science. Topics will be covered through a series of modules, including conservation genetics, costs and consequences of small populations, effects of anthropogenic activity on biodiversity, spatial dynamics, and the interface between science and society. CR: Environmental Science 4133 PR: BIOL 2900, 3295 and 4650

4701 Animal Behaviour is an examination of the behaviour of animals with particular emphasis on evolution and ecology. Topics include behavioural genetics and evolution, reproductive strategies, social behaviour, habitat selection, territoriality, foraging behaviour, and other topics in biology and psychology. CR: BIOL 3750 or Psychology 3750

4710 Experimental Marine Ecology of Newfoundland Waters is a two-week field course examines the ecology of cold ocean environments, focusing on energy flux through marine pelagic and benthic flora and fauna of Newfoundland waters, and how the dynamics of this environment influence linkages among organisms in different habitats. The course will be field intensive with some lecture component and a strong hands-on field component. Students will identify local organisms and study how and why they vary in time and space. This course will be offered during two weeks of the Spring semester. CR: BIOL 2650

4750 Fisheries Ecology is the application of ecological principles to the problem of managing exploited fish populations. Laboratory exercises will be based on a simulation approach to fisheries problems using computer and animal models. CR: BIOL 2650

4800 Advanced Palaeontology (same as Earth Sciences 4800) is a field, laboratory, and seminar course dealing with selected topics in general and applied palaeontology. Topics include measuring evolution and extinction, population palaeontology, functional morphology, paleoecology, methods for palaeontological studies, and applications in petroleum industry and environmental studies. This course is taught and administered by the Department of Earth Sciences. CR: Earth Sciences 4800 PR: Earth Sciences/Biology 3811, and one of Statistics 2510, Statistics 2550 or Mathematics 2000

4810 Research Field Course in Marine Biology will consist of an intensive two-week field school designed to acquaint students with marine field research, experimental design, methodology and data analysis. Emphasis will be placed on individual projects. Projects must be designed and approved prior to the commencement of the course and will involve a written report. At the discretion of the Head of Department, another recognized field course may be substituted for BIOL 4810. PR: BIOL 3710 and any two of BIOL 2010, 2122 or 2210 and permission of the Head of the Department. It is strongly recommended that students take BIOL 3709 before 4810.

4820 Field Course in Terrestrial Biology will begin with a three-week field school immediately prior to the beginning of the Fall Semester. It is designed to acquaint students with terrestrial organisms and environments, and emphasis will be placed on survey and sampling techniques. In the Fall Semester the material and data collected in the field will be used in lecture and laboratory periods dealing with identification, analytical methods, and report compilation. CR: BIOL 2010, 2122, 2210, 2600 and permission of the Head of the Department. It is recommended that students complete BIOL 4605.

4822 Internship in Biology - inactive course.

4910-4920 Special Topics in Biology will be given for senior undergraduates and will be in a two-week format which will involve equivalent instruction time as a course on campus. These courses will cover a range of topics in specialized fields in Biology and may be offered at the Bonne Bay Field Station, at the Harlow campus or elsewhere as appropriate. They may be taught by visiting specialists when available. 499A and 499B Honours Dissertation is available only to students in the
Honours Program. Requirements for the Dissertation are outlined under Honours Degrees.

8.3 Chemistry

Chemistry courses are designated by CHEM.

1010 Introductory Chemistry I examines descriptive chemistry; atomic structure; chemical bonding; periodicity illustrated by the chemistry of selected elements; mole concept and stoichiometry; physical properties of matter; energetics; rates of reaction; chemical equilibrium; electrochemistry. 

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LC: 4; LH: 3; PR: It is recommended that students have at least 70% in high school Mathematics 3204, or a pass in any university level mathematics course.

UL: only 6 science credit hours will be awarded for a major or honours in Chemistry from the following course groups: CHEM 1010/1011/1031, or the former CHEM 1800/1200/1001 (Sir Wilfred Grenfell College)

1011 Introductory Chemistry II examines descriptive chemistry; atomic structure; chemical bonding; periodicity illustrated by the chemistry of selected elements; mole concept and stoichiometry; physical properties of matter; energetics; rates of reaction; chemical equilibrium; electrochemistry. 

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LC: 4; LH: 3; PR: CHEM 1010.

UL: only 6 science credit hours will be awarded for a major or honours in Chemistry from the following course groups: CHEM 1010/1011/1031, or the former CHEM 1800/1200/1001 (Sir Wilfred Grenfell College)

1031 Introductory Chemistry III (F) & (I) prepares students who have completed CHEM 1010 and 1011 for CHEM 2210, 2301, 2302 and 2400. It augments the topics covered in CHEM 1010 and 1011 with the greater depth and problem solving emphasis of CHEM 1050 and 1051.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LC: 4; LH: 3; PR: CHEM 1011 and Mathematics 1000

UL: only 6 science credit hours will be awarded for a major or honours in Chemistry from the following course groups: CHEM 1010/1011/1031, or the former CHEM 1800/1200/1001 (Sir Wilfred Grenfell College)

1050 General Chemistry I has topics that will be similar to CHEM 1010/1011 but will be treated in greater depth with an emphasis on problem solving. 

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LC: 4; LH: 3; PR: at least 75% in high school CHEM 3202 and successful completion of high school Advanced Mathematics 3209.

UL: only 6 science credit hours will be awarded for a major or honours in Chemistry from the following course groups: CHEM 1010/1011/1031, or the former CHEM 1800/1200/1001 (Sir Wilfred Grenfell College)

1051 General Chemistry II has topics that will be similar to 1010/1011 but will be treated in greater depth with an emphasis on problem solving. 

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LC: 4; LH: 3; PR: Mathematics 1000 which may be taken concurrently with CHEM 1050.

UL: only 6 science credit hours will be awarded for a major or honours in Chemistry from the following course groups: CHEM 1010/1011/1031, or the former CHEM 1800/1200/1001 (Sir Wilfred Grenfell College)

2210 Introductory Inorganic Chemistry (W) studies the chemistry of selected s, p, and d block elements. Introduction to crystal and molecular structures and to molecular orbital and crystal field theories. 

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LC: 4; LH: 3; PR: CHEM 1051 (or 1001 or 1031), Mathematics 1000

2301 Thermodynamics and Kinetics builds upon knowledge of physical chemistry from first year. It covers the three laws of thermodynamics for ideal and real systems as well as chemical kinetics. Topics in thermodynamics include the thermodynamics of ideal and real gases, phases, and solutions, the Maxwell relations, equilibria between phases, and in electrolyte simple and complex solutions. The integrated rate laws for simple and complex mechanisms, and the temperature dependence of reaction rates in terms of kinetic molecular theory are some of the topics discussed in the kinetics section of the course.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

CO: Mathematics 2000 is recommended

CR: CHEM 2300 (offered at SWGC)

LH: 3

PR: minimum 60% in CHEM 1051 (or CHEM 1001 or CHEM 1031), Mathematics 1001 and Physics 1051 or Physics 1021

2302 Quantum Chemistry and Spectroscopy examines the quantum mechanics of simple systems such as the particle in a box, the harmonic oscillator, linear rotor, and hydrogen-like atoms. Topics also include orbital quantum numbers, spin, many electron atoms, an introduction to quantum mechanical methods, the electronic structures of molecules, bonding, and symmetry. Furthermore, electronic, rotational, and vibrational spectroscopy will be discussed as well as modern applications of spectroscopy and lasers.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

CO: Mathematics 2000 is recommended

CR: the former CHEM 3001

LH: 3; PR: minimum 60% in CHEM 1051 (or CHEM 1001 or CHEM 1031), Mathematics 1001 and Physics 1051 or Physics 1021

2400 Introductory Organic Chemistry I (F) is a course on bonding involving carbon; conformations and stereochemistry; introduction to functional groups and nomenclature; properties, syntheses and reactions of hydrocarbons, alky! halides and alcohols.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

CO: the former CHEM 2420, 2440 and the former 2400/A

LH: 3

PR: CHEM 1051 or 1031; or CHEM 1010 and 1011 with a grade of at least 80% in each; or CHEM 1011 with a grade of at least 85%; or CHEM 1001 with a grade of at least 85%

2401 Introductory Organic Chemistry II (W) is an introduction to the interpretation of infrared, H and C-13 NMR spectra; properties, syntheses and reactions of aldehydes, ketones, esters; alcohols, amines, carboxylic acids and their derivatives; aldol and related reactions.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

CO: CHEM 2400, the former 2420, the former 2400/A

LH: 3

PR: CHEM 1011 (or 1001 or 1051)

UL: may not be used for credit by Chemistry or Biochemistry Majors and is not a prerequisite for any other Chemistry course.

3100 Analytical Chemistry I (F) & (W) is a treatment of data, gravimetric analysis, volumetric analysis including oxidation-reduction titrations using electrochemical techniques, the use of specific ion electrodes, and titrations in non-aqueous systems. Spectrophotometric trace analysis and titration.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

CO: CHEM 2400, the former 2420, the former 2400/A

LH: 3

PR: CHEM 1011 (or 1001 or 1051)

3211 Inorganic Chemistry (W) is a detailed examination of the structure, bonding, and chemistry of the d block elements.

AR: attendance is required in the laboratory component of this course. Failure to attend may result in a failing grade or deregistration from the course.

LH: 3

PR: CHEM 2210 and CHEM 2302 (or 2300)
Faculty of Science 2010-2011

3303 Statistical Thermodynamics and Rate Theories examines physical chemistry from the microscopic viewpoint. Topics include probability distributions, quantum statistical mechanics, statistical thermodynamics, ensembles, kinetics and introduction to statistical rate theories as well as an introduction to computational chemistry (lab).
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
CR: the former CHEM 3300
LH: 3
PR: CHEM 2301 or CHEM 2302 or the former CHEM 3301
Mathematics 2000 and Mathematics 2050.

3410 Bio-organic Chemistry (F) is a study of the major classes of biomolecules, their structure, function, and in vitro chemistry. An introduction to natural products. Synthetic polymers compared to biopolymers.
Heteroatom-containing molecules and derived biomolecules.
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
CR: the former CHEM 3401
LH: 3
PR: CHEM 2401. It is recommended that CHEM 3500 be taken concurrently.

3411 Synthetic Organic Chemistry I (W) is a survey of some important reactions used in organic synthesis and pericyclic reactions and those based on carboxylation, carbene, nitrene and carbonium intermediates.
Emphasis is placed on multifunctional compounds.
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
CR: the former CHEM 3400
LH: 3
PR: CHEM 3410, or all of CHEM 2401, Biochemistry 2100 and Biochemistry 2101

3500 Spectroscopic Analysis: Spectroscopy and Structure (F) is the application of spectroscopic methods to the determination of molecular structure. Emphasis will be placed on electronic, vibrational and rotational spectroscopy, nuclear magnetic resonance spectroscopy and mass spectrometry.
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
LC: not more than 6 hours per week
LH: not more than 6 hours per week
PR: CHEM 2210, 2302 (or 2300), CHEM 2401.

3600 Marine Chemistry (W) - inactive course.

4110 Analytical Chemistry II (F) examines error treatment, atomic emission and absorption spectroscopy, chromatographic and other separations, electron spectroscopy, mass spectrometry, X-ray spectroscopy, ion and electron spectroscopy.
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
CR: the former CHEM 4100 and the former CHEM 4101
LC: not more than 6 hours per week
LH: not more than 6 hours per week
PR: CHEM 3100

4150 Advanced Spectrometric Techniques - inactive course.

4151 Analytical Separations and Organic Mass Spectrometry examines advances in the traditional chromatographic techniques, the development of new analytical tools in separation science, the interfacing of mass spectrometers to chromatographic instruments, and other mass spectrometric techniques.
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
CO: CHEM 4110
LC: not more than 6 hours per week
LH: not more than 6 hours per week
PR: CHEM 4110 (or the former CHEM 4100 or the former CHEM 4101)

4152 Electroanalytical Techniques examines the principles and theory of dynamic electrochemistry, voltammetry, stripping analysis, electro-chemical sensors and detectors.
AR: attendance is required in the laboratory component of this course.
Failure to attend may result in a failing grade or deregistration from the course.
CO: CHEM 4110
LC: not more than 6 hours per week
LH: not more than 6 hours per week
PR: CHEM 4110 (or the former CHEM 4100 or the former CHEM 4101)

4201 Coordination Chemistry in Biological Molecules - Structural, Mechanistic and Magnetic Studies examines the role of certain transition elements, e.g. iron, copper, cobalt, and zinc, in proteins and enzymes will be discussed in terms of structural features, the natural ligands, magnetic properties, etc., and reinforced with examples of 'model compounds'. Magnetic theory, in particular for polynuclear transition metal complexes, will also be developed.
PR: CHEM 3211

4202 Selected Topics in Main Group Chemistry - inactive course.

4203 Organometallic Chemistry is principles and applications of organometallic chemistry with emphasis on compounds of the transition metals, lanthanides and actinides. A study of synthetic methods, structure, bonding, reactions and applications of these concepts to organic synthesis and to catalysis.
PR: CHEM 3211

4204 Inorganic Reaction Mechanisms and Catalysis is a survey of inorganic and organometallic reactions, their mechanisms and kinetic characteristics. In addition, stericchemical non-rigidity, reactions of coordinated ligands and homogeneous catalysis are discussed.
PR: CHEM 3211

4205 Photochemistry of Transition Metal Complexes is an introduction to the theory of electronic excited states in transition metal complexes, Applications to artificial photosynthesis, photodynamic therapy, molecular photovoltaics and molecular electronics.
CO: CHEM 3211 and CHEM 2302
PR: CHEM 3211 and the former CHEM 3301 or CHEM 2302

4303 Equilibrium Statistical Mechanics is a course which examines probability theory, ensembles, and quantum statistical thermodynamics of ideal gases, perfect crystals, metals and radiation. Semiclssical statistical thermodynamics, distribution functions, as well as dense gases and liquids are also discussed.
CR: the former CHEM 4301 or the former CHEM 4302
LH: 3
PR: CHEM 3303 or the former CHEM 3301

4304 Advanced Quantum Chemistry examines exact solutions to the Schroedinger equation, introduction to approximate methods, modern methods (wavelength and density functional theories), spectroscopy, and applications of computational chemistry.
CR: the former CHEM 4300
PR: CHEM 2302 (or the former CHEM 3301) and Applied Mathematics 2360 or Pure Mathematics 3260. Due to the requirement of Applied Mathematics 3350, and Pure Mathematics 3350, students wishing to take this course should plan ahead.

4350 Advanced Physical Chemistry III: Selected Topics in Physical Chemistry (W) - inactive course.

4411 Topics in Medicinal Chemistry - inactive course.

4420 Physical Organic Chemistry (F) is an introduction to the quantitative and qualitative theories of reactions and reactivity and their application to organic reaction mechanisms and to mechanism elucidation.
CR: the former CHEM 4400 and the former CHEM 4401
PR: CHEM 2302 or the former CHEM 3301, and CHEM 3411 or the former CHEM 3401. CHEM 3500 is strongly recommended.

4430 Synthetic Organic Chemistry II (W) examines modern synthetic methods with particular attention placed on the synthesis of enantiomerically enriched compounds and newer methods for the formation of carbon-carbon bonds. Designing syntheses of complex organic molecules.
CR: the former CHEM 4410
PR: the former CHEM 3401 or 3411. CHEM 4420 is strongly recommended.

490A/B Honours Thesis is required of the Honours program.

8.4 Computer Science
Computer Science courses are designated by COMP.

8.4.1 First Year Courses
1510 An Introduction to Programming for Scientific Computing (F) & (W) introduces students to basic programming in the context of numerical methods with the goal of providing the foundation necessary to handle larger scientific programming projects. Numerical methods to solve selected problems from Physics, Chemistry, and Mathematics will be covered.
CR: COMP 2602, the former Applied Mathematics 2120
LH: 2
PR: Mathematics 1000

1600 Basic Computing and Information Technology (F) & (W) offers an overview of computers and information technology. It provides students with the knowledge necessary to answer questions, such as: What is a computer
system? How does it work? How is it used? This is done through the use of popular spreadsheet, word processing and database software packages and the Internet. Social issues and implications will also be included.

PRerequisite: Level III Advanced Mathematics or Mathematics 1090, which can be taken concurrently.

CR: COMP 2650 or COMP 2801

LH: 3

1700 Introduction to Computer Science (F) & (W) lays the foundation for the art and the science of computing. The course contains fundamental and topical issues in computers, languages, programming and applications. This course is designed for potential Computer Science majors without a background in programming, but is also available for non majors.

CO: Mathematics 1090 (or equivalent), or Mathematics 1000

LH: 3

PR: Mathematics 1090 (or equivalent), or Mathematics 1000

1710 Object-Oriented Programming I (F) & (W) is an introduction to fundamental programming techniques, primitive data types and operations, program control structures and the use of objects, classes and methods.

CO: Mathematics 1000

CR: if previously completed or currently registered for COMP 2710

LH: 3

PR: Mathematics 1000 (which can be taken concurrently), or Mathematics 1090 (or equivalent)

8.4.2 Second Year Courses

2500 Data Analysis with Scripting Languages (F) & (W) introduces the use of scripting languages to solve common data analysis tasks. The control structures and expressions of the language are first discussed. Script solutions to data-retrieving data sets, searching data sets, and performing numeric and statistical calculation are covered. Plotting and visualization for data sets are also presented.

PR: COMP 1510 or COMP 1700 or COMP 1710 or COMP 2602 (or equivalent)

2602 Computer Programming in FORTRAN (F) is a study of algorithm programming and structured programming techniques; the Fortran programming language and its application to computer solutions of scientific problems; numeric and non-numeric problems are examined with emphasis on code modularity and reusability of the components.

CR: COMP 1510

PR: Mathematics 1000

2650 Problem-Solving with Personal Computers (F) & (W) is an overview of tools and techniques that current computer technology offers in a PC based networked environment. The emphases are on conceptual understanding of the software, from exploring capabilities of the existing software tools to learning methods of extending these capabilities. The key topics include problem-solving strategies, visual programming, macro-language operations, object linking and embedding, digital communication, and developing interactive web pages. The course has a practical flavour. In structured laboratory sessions, students gain proficiency in using personal computers for solving common problems.

CO: Mathematics 1000

CR: COMP 1600, COMP 2801, or the former Business 2700

PR: Level III Advanced Mathematics or Mathematics 1000 or Mathematics 1090 (or equivalent)

2710 Object-Oriented Programming II (F) & (W) continues from Object-Oriented Programming I, and studies object-oriented and event-driven programming. Additional topics include: recursion, basic analysis of algorithms, fundamental data structures such as simple linked structures and stacks, and fundamental computing algorithms such as binary search and quadratic time sorting. A brief overview of programming languages, virtual machines and language translations is also provided.

LH: 3

PR: COMP 1710

2711 Introduction to Algorithms and Data Structures (F) & (W) includes the study of standard ways of organizing and manipulating data in computer storage. Fundamental concepts in the design and analysis of algorithms are also discussed.

LH: 3

PR: COMP 2710. It is recommended that students complete COMP 2742 prior to registering for COMP 2711

2742 Logic for Computer Science (F) & (W) is an introduction to propositional and predicate logic with applications. The use of the system of boolean logic in reasoning and circuit design, as well as basic proof techniques and the resolution principle, for both propositional and predicate logic, will be covered. Concepts involving sets will be used to illustrate different types of proof techniques. The probable intractability of boolean logic and Goedel's incompleteness theorem will be presented.

PR: COMP 1710

2752 Introduction to Business Data Processing (F) - inactive course.

2760 Encountering the Computer: Society and the Individual (F) & (W) examines social, ethical, legal and cultural issues surrounding the use of computers in modern society. These broader social issues are followed by an examination of the use of social and individual psychology in user interface design. Students will be expected to demonstrate an understanding of these issues both directly (through verbal and written discourse) and practically, as applied to the creation of actual software artifacts.

CO: COMP 2710

PR: two 1000-level English courses, or equivalent

2801 Introductory Computing for Business (F) & (W) introduces students to computer applications in business, document processing, application development, decision support, and information management. A three hour laboratory is required.

CO: Mathematics 1000

CR: COMP 1600, COMP 2650, or Business 2700

PR: Level III Advanced Mathematics or Mathematics 1000 or Mathematics 1090 (or equivalent)

8.4.3 Third Year Courses

3700 Industrial Experience (F), (W), (S) is a course for students who are admitted to CIIO. Students are required to register for this non-credit course every semester during their internship. This course is open only to students who have been accepted into the Internship Program and provides an opportunity for qualified students to gain work experience of 8, 12 or 16 months of continuous duration, during the course of their studies.

CR: 0

PR: admission to the Computer Industry Internship Option (CIIO)

3710 Vocational Languages (W) is a study of several programming languages of vocational significance (e.g. a selection from C, C++, Prolog, Perl, Python and LISP). The use of appropriate programming paradigms to solve some significant problems.

PR: COMP 2711

3714 Programming Languages and their Processors (F) & (W) reviews typical elements of (imperative) programming languages, and then discusses languages and their implementations in the form of compilers and interpreters. The topics include specification of syntax and semantics of programming languages, discussion of expressions and assignments, side effects and control structures, data and procedural abstractions, parameter passing mechanisms, bindings, scopes, and type systems. The recursive-descent technique is used for illustrations of different aspects of syntax analysis, code generation and error recovery. Language interpreters are discussed for both low-level and high-level languages.

PR: COMP 3719 and 3724

3715 Network Computing with WEB Applications (F) & (W) studies how distributed applications (e.g., client/server Web applications) are constructed using the Internet. Topics covered include: the socket interface for network communication, client/server applications, browser scripting using Javascript, content generation for web applications (e.g., java, php), html/css documents, and the use of cryptography to handle security.

PR: COMP 2711

3716 Software Methodology (F) & (W) studies the development of software by gathering the requirements of the software program, analysing the requirements to create a development model, and creating the software and documents for the software product. This course studies techniques for all three software development activities.

PR: COMP 2711

3717 Symbolic Computation and Recursion (W) - inactive course.

3718 Programming in the Small (F) demonstrates the tools and techniques used in the construction of small software systems. The software tools and techniques to be covered include analysis and design of software components, software construction tools (e.g. linkers, builders, debuggers), software library use and design, and system integration.

PR: COMP 2711 and Pure Mathematics 2320

3719 Theory of Computation and Algorithms (F) & (W) is an introduction to formal algorithmic problem solving. Various algorithm design techniques that sometimes yield efficient solutions are studied. Deterministic and nondeterministic machines (finite state automata, pushdown automata and Turing machines) are discussed and used to efficiently solve problems such as the String Matching Problem, the parsing of Context-free Languages, and to introduce the theory of NP-completeness. In addition, Turing machines are used to prove the unsolvability of certain problems. Tractable, intractable and undecidable problems are contrasted. Basic issues related to parallelization are discussed as well.

CR: the former COMP 3711 and the former COMP 3740

PR: COMP 2711 and Pure Mathematics 2320

3723 Logic Design (F) - inactive course.

3724 Computer Organization (F) & (W) can be studied at the digital logic implementation level, the instruction set architecture level, and the
translation of programming languages to the underlying machine instruction level. This course studies computer organization at these levels.

PR: COMP 2711 and COMP 2742

3725 Computer Architecture and Operating Systems (F) & (W) covers system design and the architectural implementations of these designs. The objective is to develop the basic concepts of processor design, memory management, operating systems, and I/O devices and their interactions.

PR: COMP 3724

3731 Introduction to Scientific Computing (W) main objectives are the development of algorithms for the numerical solution of mathematical problems and the study of the numerical stability of these algorithms. The efficiency of these algorithms with respect to speed and storage requirements is considered as well. Emphasis is also placed on the study of the sensitivity of selected problems to perturbations in the data. There is also a brief introduction to the development of numerical algorithms that take advantage of advanced computer architectures, such as pipeline processors, array processors and parallel processors.

CR: Applied Mathematics 3132
PR: Mathematics 2000 and Mathematics 2050, and one of COMP 2602 or COMP 2710

3751 Computational Aspects of Operations Research (W) - inactive course.

3753 Computational Aspects of Linear Programming (F) is an introduction to the Linear Programming Problem (LPP). The emphasis is placed upon developing the most recent and numerically reliable algorithms for the solution of the Linear Programming Problem. The numerical stability of these algorithms will be examined as well. Geometric understanding of the LPP. Simplex method for the LPP. Duality and postoptimality analysis. Extensions to the simplex algorithm. Principles of interior algorithms for the LPP.

PR: Mathematics 2050, and one of COMP 2602 or 2710

3754 Introduction to Information and Intelligent Systems (F) & (W) introduces students to application areas that are away from usual number-based and text-based processing. Students will learn the basic concepts and become aware of the historical developments and social and ethical issues related to the application areas such as intelligent systems and information management. This exposure will help students to become knowledgeable about managing large volumes of data and dealing with problems that are well defined but whose algorithmic solutions are not feasible or problems that are fuzzily defined.

PR: COMP 2711 and COMP 2742

3790 Directed Readings - inactive course.

8.4.4 Fourth Year Courses

4711 Structure of Programming Languages covers programming language design considerations; syntactic and semantic structure; survey of typical features and operations; analysis of facilities for control and data structuring; language extensibility; execution models; formal specification of programming languages.

PR: COMP 3719 and COMP 3724

4712 Compiler Construction studies properties of formal grammars and languages; syntax-directed parsing and code generation; top-down and bottom-up parsing methods; LL(k) and LR(k) grammars and parsers; Code optimization; compiler writing tools.

PR: COMP 3719 and COMP 3724

4715 and 4717 Special Topics in Programming Languages

4716 Survey of Software Engineering surveys the major topics of software engineering. Areas covered include: requirements capture, system design and design approaches, verification and validation (including formal methods and testing), and management of the software development process.

PR: COMP 3716

4719 Software Specification - inactive course.

4721 Operating Systems studies the design and implementation of an operating system's kernel. The main components used in operating system implementations include: context switches, process management, memory management, interprocess communication, file systems and system calls. The data structures and algorithms used in implementing the above components are studied. The different architectural styles of kernel implementation are also considered. Real-time operating systems are also discussed.

CR: Engineering 8894
PR: COMP 3725

4723 Introduction to Microprocessors examines the architecture and instruction sets for several microprocessors. The use of microprocessors as device controllers; comparisons of hardware and programmed techniques; microprocessor interfacing with external devices; methods of I/O; bus structures; modern microprocessor support devices are discussed. LH: Minimum of three hours per week. Practical experience with basic principles will be obtained through laboratory experience.

PR: COMP 3724

4725 Introduction to LSI Design - inactive course.

4726-4729 Special Topics in Computer Systems

4734 Matrix Computations and Applications is an introduction to linear algebra; solution to linear systems; scaling, improving and estimating accuracy; the linear least squares problem; the eigenvalue problem; singular value decomposition of a matrix; the generalized eigenvalue problem.

PR: COMP 3731

4735 Advanced Matrix Computations and Applications - inactive course.

4736-4739 Special Topics in Numerical Computations

4740 Design and Analysis of Algorithms will give an overview of techniques for the design of efficient optimal-solution and heuristic algorithms. It will include an introduction to various advanced data structures for set and string processing that are used to further optimize algorithm efficiency.

PR: COMP 3719

4741 Formal Languages and Computability is an in-depth study of various types of formal machines and their associated languages. Effective computability and other formalisms, such as lambda calculus will be studied as well.

CR: the former COMP 3740
PR: COMP 3719

4742 Computational Complexity is an in-depth discussion of computational complexity theory. Topics covered in the course include: models of computation (for both serial and parallel computations); complexity measures; reducibility; complexity classes (NP, PSPACE, NC, LOGSPACE and P); and randomized computations.

PR: COMP 3719

4743 Graph Algorithms and Combinatorial Optimization discusses classical problems in combinatorial optimization and graph algorithms, including matching, colorability, independent sets, isomorphism, network flows and scheduling. Special families of graphs are discussed and algorithms that would otherwise be NP-hard or complete are shown to be polynomial time when restricted to such families.

PR: COMP 3719

4745-4749 (Excluding 4748) Special Topics in Theoretical Aspects

4748 Introduction to the Science of Complexity is an exploration of the use of computers in the simulation of complex systems. Some theories and models, such as cellular automata, artificial life, fractals, genetic algorithms, chaos, and evolution will be discussed and will be used in the modelling of "real-life" systems. The approach in this course is practical. Students have to write a number of programs of different levels of sophistication including a final project.

PR: COMP 3719

4751 Computer Graphics examines display devices, display processors, display file compilers, display transformations, structured display files, graphical input devices, perspective, hidden line elimination, languages and graphics systems.

LH: 3
PR: COMP 3719 and Mathematics 2050

4752 Introduction to Computational Intelligence provides an introduction to four of the fundamental computational intelligence methods: artificial neural networks, evolutionary computation, swarm intelligence and fuzzy systems. The integration of these techniques for problem solving will also be introduced.

PR: COMP 3719 and COMP 3754

4753 Artificial Intelligence has selected topics from AI programming languages; heuristic searching; problem solving; game-playing; knowledge representations; knowledge-based systems; reasoning in uncertainty situations; planning; natural language understanding; pattern recognition; computer vision; and machine learning.

PR: COMP 3719 and 3754

4754 Database Systems introduces students to database processing, database management systems and database design considerations. It will cover the theory and methodologies essential for the relational database design, implementation, manipulation, optimization and management.

PR: COMP 3725 and 3754

4756 Image Processing will centre on the key analytical and algorithmic tools and concepts of digital image processing. Topics will include Transformations, Enhancement, Encoding, Data Bases, Segmentation and Description.

LH: 3

AR = Attendance requirement; CH = Credit hours are 3 unless otherwise noted; CO = Co-requisite(s); CR = Credit can be retained for only one course from the set(s) consisting of the course being described and the course(s) listed; LC = Lecture hours per week are 3 unless otherwise noted; LH = Laboratory hours per week; OR = Other requirements of the course such as tutorials, practical sessions, or seminars; PR = Prerequisite(s); UL = Usage limitation(s).
4759 Computer Networks looks at how the operation of computer networks requires the following: a) communication between two computers, b) information transfer between two computers not directly connected, and c) services that need computer communication. This course focuses on the standard solutions and services used to fulfill the previous requirements. These include: physical transmission of signals, reliable communication based on unreliable communication channels, the routing of messages between connected computers to reach computers that are not directly connected, e-mail, file transfer, name servers, remote terminal access and the World Wide Web. Particular attention will be placed on the workings of the Internet.

PR: COMP 3715 and COMP 3725

4761 Human-Computer Interaction - inactive course.

4762 Introduction to Computational Molecular Biology will give an overview of computational problems and algorithms for these problems associated with a variety of analyses of biological molecular data.

PR: COMP 3719

4766 Introduction to Autonomous Robotics examines the fundamental constraints, technologies, and algorithms of autonomous robotics. The focus of this course will be on computational aspects of autonomous wheeled mobile robots. The following topics will be covered: major paradigms in robotics, methods of locomotion, kinematics, simple control systems, sensor technologies, stereo vision, feature extraction, modelling uncertainty of sensors and positional information, localization, SLAM, obstacle avoidance, and 2-D path planning.

4767 Information Visualization and Applications focuses on the design and implementation of interactive visualization techniques for the analysis, comprehension, exploration, and explanation of large collections of abstract information. Topics to be covered include principles of visual perception, information data types, visual encodings of data, representation of relationships, interaction methods, understanding user goals and tasks, and evaluation techniques. Case studies of accepted techniques and the current state-of-the-art in information visualization will be presented.

PR: COMP 2760 and COMP 3719

4768 Software Development for Mobile Devices focuses on the design and implementation of software in a mobile networking environment. The primary topics to be covered in this course include software engineering, network computing, graphics programming, and human-computer interaction for mobile devices. A modern mobile device with advanced networking and graphic features, including multi-touch interaction and motion sensors will be used as the primary platform for development in this course.

LH: One and one-half hours per week
PR: COMP 2760, COMP 3715 and COMP 3716

4770 Team Project has as its main objective to develop a working prototype of a software system as a team effort. A group of students will work on a project for a term, experiencing the advantages and difficulties of team projects.

PR: COMP 3716, COMP 3724, COMP 3754, and one other 3000-level course, preferably COMP 3715

4780 Honours Project introduces computer science honours students to research activities, familiarizes them with a special problem in computer science, and provides independent study on an advanced topic under the direct supervision of a member of the computer science faculty. The topic is decided in consultation with the supervisor. The student is required to produce a written report on the project, to include the literature search on the topic, and to present this work at a departmental seminar prior to the last week of the semester.

PR: admission to the honours program and permission of the Head of Department

4800-4825 Special Topics will be offered as departmental resources permit.

CO: Special topics courses are not offered on a regular basis, but whenever departmental resources permit. For these reasons, the prerequisites can vary each time the courses are offered.

PR: Special topics courses are not offered on a regular basis, but whenever departmental resources permit. For these reasons, the prerequisites can vary each time the courses are offered.

8.5 Earth Sciences

The first digit of each course number designates the level (year) of the course. The second digit indicates the area of Earth Sciences into which the course best fits, as follows:

Second Digit
0 - mineralogy and petrology
1 - geophysics
2 - economic geology
3 - stratigraphy and marine geology
4 - structural geology and tectonics
5 - geochemistry
6 - technical fields and petroleum geology
7 - sedimentation, geomorphology
8 - paleontology
9 - general and dissertation

Earth Sciences courses are designated by EASC.

8.5.1 First Year

1000 Earth Systems is a survey of the structure, function and interrelations of Earth’s lithosphere, hydrosphere, atmosphere and biosphere. Topics include an exploration of the physical and chemical properties of planetary materials, forces driving and sustaining Earth systems, and biological modifiers (including humankind) on the Earth today.

LH: 3

1001 Evolution of Earth Systems - inactive course.

1002 Concepts and Methods in Earth Sciences provides an introduction to a broad range of concepts concerning the development of the geological record and the Earth; practical methods for collection of field based data; topics in map interpretation and geometric analysis, stratigraphy, paleontology, structure and petrology. The course is presented with an emphasis on the development of practical skills needed to pursue a career in Earth Sciences.

LH: 3
PR: EASC 1000

8.5.2 Second Year

2030 Mineralogy (F) provides an introduction to crystallography and the structure of minerals; introduction to crystal optics; study of the rock forming minerals and minerals of economic significance. Laboratory work comprises study of the structures and symmetries of minerals, chemistry of rock forming minerals, introduction to transmitted light microscopy of rocks, hand specimen recognition of common rocks and minerals.

CO: EASC 2502
CR: the former EASC 203A/B
LH: 3
PR: EASC 1000, Chemistry 1011 (or 1051 or equivalent), Physics 1051 (or 1021 or 1054), and Mathematics 1000

2031 Mineralogy and Petrography (W) examines the optical and chemical properties of rock-forming minerals, the petrography and classification of igneous and metamorphic rocks and applications of relevant phase equilibria to the study of minerals. Laboratory work comprises optical mineralogy and petrography of igneous and metamorphic rocks.

CO: Mathematics 1001
CR: the former EASC 203A/B
LH: 3
PR: EASC 2030, 2502; Mathematics 1001

2150 The Solar System (F) & (W) describes the basic astronomy of the Solar System, tracing the search to understand motion of the Sun, Moon and planets in the sky; modern observations of planets, moons, comets, asteroids and meteorites and what they tell us about the origin and evolution of the Solar System.

UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Earth Sciences

2311 Geoscience Communication (W) - inactive course.
2401 Structural Geology (W) provides an introduction to basic concepts; the physics of rock deformation, the classification and descriptive geometry of major and minor structures and their relationship to stress and strain. Laboratories will concentrate on analysis of structural orientation data, and the analysis of structures in geological maps and cross-sections. Earth Sciences majors are advised to complete field course, EASC 3905, immediately following completion of this course.

CR: the former Geology 3120 or the former EASC 3120 or the former EASC 3400
LH: 3
PR: EASC 2905 or (for students following a Minor in Earth Sciences)
permission of the Head of the Department

2502 Introduction to Geochemistry (F) provides an overview of both low- and high-temperature geochemistry. Topics include: origin and classification of the elements; chemical differentiation of the solar system and solid Earth; aqueous systems and the stability of minerals; radiogenic and stable isotopes. Geochemical concepts are illustrated using data and processes drawn from Earth systems. The laboratory component emphasizes the development of numerical skills needed in geochemistry.

CO: Mathematics 1001
LH: 3
PR: EASC 1000, Chemistry 1011 (or 1051 or equivalent)

2702 Sedimentology and Stratigraphy (F) is a study of the origin and composition of sediments with a focus on depositional processes and resulting sedimentary structures. Study of environments of deposition and the stratigraphic framework of sedimentary successions. Laboratories involve local field trips and the study of hand samples of sedimentary rocks.

CR: the former Geology 3070 or the former EASC 3070 or the former EASC 3701
LH: 3
PR: EASC 1002

2905 Introduction to Geological Mapping (F) is based on approximately six days of geological mapping in Precambrian rocks near St. John's, and two days of in-class work preparing a digital map and written report. Emphasis is placed on the recognition and description of sedimentary and igneous rocks in the field, and techniques of geological mapping and the taking of field notes. This course will be given during a special session immediately preceding the fall semester.

AR: attendance is required
CH: 2
CR: the former EASC 2310 or the former EASC 2300
OR: field based course
PR: EASC 1002 and an application to the Head of the Department

2914 The Earth's Energy Resources: Past, Present and Future (F) (formerly Geology 2414 and EASC 2414) provides a scientific analysis of the Earth's energy resources. The history of human exploitation of them; consequences for quality of life, and political and economic power; scenarios for the future. This course is designed for students taking Earth Sciences as an elective subject. This course complements traditional disciplines such as history, economics, and political science and should be of particular interest to teachers.

CR: the former Geology 2414 and the former EASC 2414
UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Earth Sciences.

2915 The Earth's Material Resources: Past, Present and Future (W) (formerly Geology 2415 and EASC 2415) provides a scientific analysis of the Earth's material resources (metals, non-metals, water). The history of human exploitation of them; consequences for quality of life, and political and economic power; scenarios for the future. This course is designed for students taking Earth Sciences as an elective subject. This course complements traditional disciplines such as history, economics, and political science and should be of particular interest to teachers.

CR: the former Geology 2415 and the former EASC 2415
UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Earth Sciences.

2916 Natural Hazards on a Dynamic Earth (W) describes the surface of the Earth being in a constant state of change, whereby rising poses and challenges for society. An understanding of geological processes in the past and present in the context for evaluating risks related to earthquakes, volcanic activity and mass movements, challenges related to water resources, land-use planning and waste disposal, and the background to interrelations and consequences of climate change. The course will provide a broad perspective on contemporary issues facing society. This course is designed for students taking Earth Sciences as an elective subject. This course complements traditional disciplines such as history, economics, and political science and should be of particular interest to teachers.

UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Earth Sciences.

2917 Gems: the science and politics introduces students to precious and semi-precious stones both from the perspective of their nature and origin and from the perspectives of geography and the socio-political issues of mining, recovery, trade and cartels. The properties that confer value upon gems (colour, clarity, cut and carat), the techniques used to enhance, fake and imitate gems and the techniques used to detect fraudulent “gems” will be covered. The course will include discussion of the diamond industry in Canada and consideration of some famous gems. This course is designed for students taking Earth Sciences as an elective subject. This course complements traditional disciplines such as history, economics, and political science and should be of particular interest to teachers.

UL: not acceptable as one of the required courses for the Minor, Major or Honours programs in Earth Sciences.

8.5.3 Third Year

3030 Mineralogy and Materials Science provides a review of elementary crystallography, introduction to space groups and crystal structures, bonding properties of semiconductors and insulators, crystallographic aspects of order-disorder, solid solution and mixing. Crystal growth, chemical zoning and diffusion. Phase changes in the solid state (exsolution, polymorphism and polytypism). Students will be introduced to the techniques used to study solids (X-ray diffraction, scanning and transmission electron microscopy, electron-microprobe analysis, luminescence, and computer simulation). Laboratory work will emphasize practical skills using these techniques. Examples will be chosen from among minerals, ceramics, semiconductors, metals and glass, making the course suitable for Earth Scientists, Engineers, Chemists and Physicists.

LH: 3
PR: EASC 2030 or equivalent or permission of the instructor

3054 High-Temperature Geochemistry and Igneous Petrology (F) is an integrated course dealing with the geochemistry, origin and classification of igneous rocks. Topics include trace element geochemistry; physical properties of magmas, physical and chemical processes in magma chambers (fractional crystallization, differentiation, assimilation and partial melting), phase equilibria and application to magmas, petrology of the upper mantle, and igneous rocks of specific tectonic settings (oceanic lithosphere, continental margins, continental lithosphere). Laboratories include thermodynamic and phase diagram problems, hand specimen and thin section studies.

CR: the former EASC 3053 in combination with the former 2503
LH: 3
PR: EASC 2031 and 2502

3055 Thermodynamics and Metamorphic Petrology (W) is an integrated course dealing with the geochemistry, origin and classification of metamorphic rocks. Topics include thermodynamic background and kinetics (transfer of mass and energy in geochemical systems of the Earth's interior, thermodynamic laws, phase equilibria, solid-solid reactions, reaction rates); metamorphic facies, field gradients, isograds and reactions; mineral assemblages and textures of common metamorphic rocks. Laboratories include thermodynamic and phase diagram problems, hand specimen and thin section studies.

CR: the former EASC 3053 in combination with the former 2503
LH: 3
PR: EASC 2031 and 2502, Mathematics 1001

3170 Exploration Geophysics I (W) examines fundamentals of seismic energy transmission in the Earth; basic methods in seismic exploration - data acquisition, processing and interpretation for reflection and refraction surveys; fundamentals of gravity and magnetic data acquisition, processing and interpretation; introduction to gravity and magnetic modelling.

CO: EASC 2905
LH: 3
PR: EASC 2905, Physics 1051 (or 1021 or 1054); Mathematics 1001; Mathematics 2000 or Statistics 2510.

3172 Exploration Geophysics II (F) is an introduction to electrical and electromagnetic methods in geophysics applied in mineral exploration, petroleum well logging and environmental studies, and examples of application of various techniques; use of data processing and modelling techniques in interpretation; introduction to radiometric methods used in mineral and petroleum exploration.

CO: EASC 2905
LH: 3
PR: EASC 2905, Physics 1051 (or 1021 or 1054); Mathematics 1001; Mathematics 2000 or Statistics 2510.

3179 Geophysical Analysis covers Vector Calculus; curvilinear coordinates; line integration; volume integration; integral theorems; the derivation and application of geophysically important partial differential equations - Laplace’s equation to the Earth's gravity and magnetic fields, the time-dependent heat equation to the Earth's heat flow, and the wave equation to electromagnetic and seismological phenomena; geophysical uses of Legendre functions; Fourier analysis in geophysics. The laboratory component will familiarize the student with practical applications of the tools discussed.

LH: 3
PR: Mathematics 2000, Physics 2055 and 2820

3210 Economic Mineral Deposits (W) is an introduction to the study of...
mineral deposits and definition of the basic physio-chemical parameters of ore deposit formation. The course involves a systematic review of genetic models for the principal types of metallic mineral deposits, and links these models to a common theme of the relationship between lithosphere-hydrosphere-biosphere interactions and metallogeny. Laboratory exercises involve examination of representative suites of samples from different types of metallic mineral deposits and provide an introduction to the use of reflected light microscopy.

3420 Global Tectonic Processes examines how horizontal and vertical motions of the Earth's surface are influenced by heat and mass transfer within its interior. Surface motions are described quantitatively and qualitatively in the framework of plate tectonics, and used to identify major controls on the igneous, metamorphic and sedimentary rock records. Laboratory exercises emphasize geologic and geophysical applications of the material developed in lectures.

CR: the former EASC 2070, 2161, 2400 and 4901

LH: 3
PR: either EASC 2031, 2502 and 2905; or EASC 2031 and Chemistry 3211; or Engineering 3610 and the former Engineering 3205

3600 Environmental Geology (F) examines the application of basic concepts and fundamental principles of geochemistry in evaluating natural and human-induced change through time on the interaction of the Earth's lithosphere, hydrosphere, atmosphere and biosphere, includes the effects of contaminants on global change. Laboratory time will be used for short field-based studies and for exercises examining the effects of contaminants on global change.

LH: 3
PR: Mathematics 1000 and 1001, Physics 1021 or 1051

3611 Engineering Geology (W) examines basic concepts in soil, rock and fracture mechanics; classification of soil, rock and rock masses; special topics include engineering and environmental aspects and issues of: slope development and underground excavations in soils and rocks; the development of hydroelectric and irrigation projects; the nuclear fuel cycle; resource developments in sensitive terrains.

CR: the former EASC 4611

LH: 3
PR: Mathematics 1001 or permission of instructor.

3702 Lithification, Diagenesis and Sedimentary Rock Properties provides a conceptual and practical overview of the transformation of sediments into the sedimentary rocks through compaction, cementation and mineral reactions, and the resultant modifications of rock composition, rock fabrics, and associated porous media characteristics (e.g. porosity). Both descriptive and analytical methods are integrated in laboratories that include carbonate and sandstone petrology (hand samples and thin sections), geological analysis of selected welsite logs, and the analysis of fluid reservoir properties.

LH: 3
PR: EASC 2031, 2702 and 2905

3705 Field Course in Sedimentology, Reservoir Architecture and Sequence Stratigraphy is a ten day field and lecture based course normally offered in the first two weeks of the Spring semester that aims to teach students to use sedimentological and palaeontological data for palaeoenvironmental analysis. The course will demonstrate the use of sedimentary facies models and facies architectural studies in reservoir geology, particularly when coupled with the principles of sequence stratigraphy. Students will be taught to create sedimentary logs and facies architectural panels.

CO: EASC 2702, 3811, 3905
CR: the former EASC 4700 or the former Geology 4700
OR: field based course
PR: EASC 2702, 3811, 3905

3811 Palaeontology (W) outlines the major changes in life forms from Archean times through the Phanerzoic to the present day, including details of invertebrate and vertebrate faunas and major floral groups; mechanisms and rates of evolution and micro-evolution in the fossil record; biology and classification of organisms and summaries of their geological significance in biostatigraphy, paleoecology and rock-building; relationships between major cycles of evolution and extinction to global processes.

CR: Biology 3811 or either the former EASC 3801 or the former Biology 3800

LH: 3
PR: either Biology 2120 (or Biology 1001 and 1002) and EASC 1002; or Biology 2122 and 2210

3905 Field Methods in Structural Geology and Stratigraphy (W) is based on approximately 5 days of geological mapping in Precambrian rocks near St. John's. Emphasis is placed on application of techniques of structural analysis. Evenings will be dedicated to data analysis and preparation of structural maps and sections. Students are advised to complete this course immediately following EASC 2401. This course will be given during a special session immediately following the Winter semester examination period.

AR: attendance for all of the field school days is required. Failure to attend may result in a failing grade or withdrawal from the course.

CH: 1
OR: field based course
PR: EASC 2401 and 2906 and an application to the Head of the Department

8.5.4 Fourth Year

4053 Petrogenesis of Igneous Rocks investigates the origin of topical and important groups of igneous rocks based on experimental petrology, phase equilibria and application of geochemical tools. It further investigates the classification of igneous rocks, including the study of volcaniclastic rocks and aspects of physical volcanology. The laboratory component of the course emphasizes practical aspects of igneous petrology including geochemical characterization and use of hand-sample and field criteria.

LH: 3
PR: EASC 3054 and 3420

4054 Metamorphic Petrology examines relationships between metamorphism and tectonics, representation and interpretation of metamorphic mineral assemblages using compositional phase diagrams and petrogenetic grids; equilibrium thermodynamics and thermobarometry; determination of P-T-t paths. Laboratories include use of the electron microprobe to collect data for use in calculations of the conditions of formation of metamorphic assemblages, and various types of software applicable to metamorphic petrology.

LH: 3
PR: EASC 2401, 3055 and 3420

4105 High Resolution Geophysics is a senior level field based course in high resolution geophysics with an emphasis on environmental applications. Topics to be covered include Ground Probing Radar, methods in refection seismology, high resolution magnetic surveys, microgravimetry surveys, electrical and electro-magnetic methods. This course has a laboratory component in which students conduct a series of surveys over a specific site and process and interpret the collected data.

LH: 3
PR: EASC 3170, 3172 and 3179

4171 Exploration Geophysics III examines techniques involved in the acquisition, processing and interpretation of multichannel seismic reflection data. Introduction to elastic properties of rocks. Introduction to advanced processing and interpretation techniques as applied to qualitative and quantitative evaluation of hydrocarbon reservoir characteristics. This course has a laboratory component designed to provide hands-on experience with data processing and interpretation.

LH: 3
PR: EASC 3170 and 4179

4173 Exploration Geophysics IV examines advanced techniques in electrical and electromagnetic exploration methods including advanced IP, airborne EM surveys, EM and IP modelling, and inversion techniques; advanced methods in gravity and magnetic field exploration techniques including 2 ½-D and 3-D modelling and inversion, map processing techniques, and excess mass determination.

LH: 3
PR: EASC 3170 or 3172; and EASC 4179

4179 Digital Signal Processing is an introduction to the theory and basic computational techniques of digital signal processing in geophysics. Topics covered include: sampling, Fourier transformation, design and application of digital filters, deconvolution, spectral analysis, two dimensional signal processing, with emphasis on geophysical applications.

LH: 3
PR: EASC 3179

4211 Economic Geology provides a detailed look at the methodologies and techniques used in the study of mineral deposits and their applications in case histories. Laboratory exercises involve solving problem sets using the various types of data from selected case studies.

LH: 3
PR: EASC 3054 or 3055; and EASC 3210

4302 Advanced Marine Geology examines the geology and geophysics of ocean basins; discussion of methods of oceanic exploration, the history and development of ocean basins, interrelationships between ocean water, marine organisms, sedimentary and igneous processes.

PR: EASC 1001 or 1002 and completion of any 15 credit hours in core courses at the 3000 and/or 4000 levels (see General Note 5) in Biology, Biochemistry, Chemistry, Earth Sciences, Physics, or Geography.

4310 Earth Science Concepts, Materials and Techniques for Archaeologists - inactive course.

4400 Advanced Techniques in Structural Geology examines modern
techniques of structural analysis applied to fold and fault systems including progressive deformation and strain analysis, fold mechanisms, fold morphology and classification, fold sections and profiles, superposed folding, fault geometry and morphology, brittle and ductile shear zones, and construction of balanced cross-sections.

LH: 3
PR: EASC 2401 and 3905 and a minimum of 6 credit hours in Earth Sciences at the 3000 level

4420 Tectonics and Crustal Evolution is a lecture and seminar course covering secular change and tectonic evolution in Earth history from the Archean to Mesozoic, featuring examples from the North American geological record. The course will draw on and link concepts from a variety of Earth Science disciplines and provide an overview of the geological evolution of North America in a tectonic context.

CR: the former EASC 4901
OR: seminar
PR: EASC 3420

4502 Advanced Geochemistry focuses primarily on the application of trace, radiogenic and stable isotope geochemistry to constrain the origin, mass balance and chemical fluxes within the Earth's lithosphere and asthenosphere. The course permits students to complete assignments in aspects of geochemistry that reflect their career interests.

LH: 3
PR: EASC 2031 and 2502 and a minimum of 6 credit hours in Earth Sciences at the 3000 level

4503 Mineral Exploration Geochemistry is an examination of the application of geochemistry to mineral exploration, covering the lithogeochemical characteristics of ore deposits, their host rocks, and element dispersion from them; the principles of sampling and analysis in exploration geochemistry; approaches to the statistical analysis, graphical presentation, and interpretation of survey results; and the design of effective geophysical surveys. Particular emphasis will be placed on case studies relevant to exploration in Newfoundland and Labrador. Laboratory/seminar sessions involve working with exemplary data sets, using computer-based software for statistical analysis and software for searching large databases and viewing the spatial relationships of different types of map data relevant to the mineral exploration industry.

LH: 3
OR: seminar
PR: EASC 3210

4601 Petroleum Origin and Occurrence - inactive course.

4602 Sedimentary Basins and Hydrocarbon Exploration provides a review of sedimentary basin types and associated petroleum systems including concepts applicable to petroleum generation, migration and accumulation. Regional-scale stratigraphic and structural concepts/models are presented as a framework for hydrocarbon fluid flow and entrapment. Laboratories include description and analysis of data typical of basin- and regional-scale exploration and appraisal of hydrocarbon resources using a variety of integrated, interdisciplinary techniques (geological, geophysical and geochemical).

CR: EASC 4601
LH: 3
PR: EASC 2401, 2702, 3170 and 3420

4603 Reservoir Characterization provides a review of the sedimentary, stratigraphic and structural setting of hydrocarbon reservoirs and the geological controls on reservoir quality. Reservoir types and methods of study are presented to evaluate their key properties for the development and production of hydrocarbons. Laboratories include detailed subsurface correlation and mapping, log analysis, interpretation of reservoir data (e.g. capillary pressure, porosity, permeability and production data).

CR: EASC 4601
LH: 3
PR: EASC 2401, 2702, 3170 and 3702

4610 Hydrogeology examines geology and its relationship to groundwater occurrence and exploitation: basic theory, groundwater flow systems, surface-groundwater interactions and changes in water quality, field and laboratory techniques, hydrogeological aspects of waste disposal and resource development.

LH: 3
PR: EASC 2502 or permission of instructor

4720 Carbonate Depositional Environments and Diagenesis examines carbonate environments and their facies models with examples from modern and ancient settings. Diagenetic environments and diagenetic controls on rock properties, particularly porosity, are examined, as well as their application in the reconstruction of the diagenetic history of a sedimentary basin and in the characterization of hydrocarbon reservoirs. The application of chemostratigraphy to correlation is discussed. The laboratory exercises focus on hand specimen, thin section and geochemical methods to investigate carbonate from different depositional settings and a wide spectrum of diagenetic environments covered in lectures.

CO: EASC 3811
LH: 3
PR: EASC 2031, 2702, and 3811

4800 Advanced Paleontology (same as Biology 4800) is a field, lecture, laboratory and seminar course dealing with selected topics in general and applied paleontology. Topics include measuring evolution and extinction, accumulation paleontology, functional morphology, paleoecology, statistical methods for paleontological studies, and applications in petroleum, mining, and environmental studies.

CR: Biology 4800
LH: 3
PR: EASC 3811, and Statistics 2510 or Mathematics 2000

4902 Early Evolution of the Earth (F) - inactive course.

4903 Global Change (W) is a lecture and seminar course that studies the interaction of the atmosphere, biosphere and lithosphere; topics covered include the evolution of the biosphere, fluid circulation, global geochimical budget, global environmental changes, and chemical evolution of the atmosphere.

OR: seminar
PR: EASC 1001 or 1002, and Biology 2120 (or Biology 1001 and 1002); and completion of any 15 credit hours in core courses at the 3000 and/or 4000 levels (see General Note 5) in Biology, Biochemistry, Chemistry, Earth Sciences, or Physics; or permission of the instructor.

4905 Field Course in Geological Mapping and Regional Tectonics is a two-week field school designed to allow application of techniques introduced in the third year, and to provide an introduction to the Appalachian geology of western and central Newfoundland. Reports must be submitted for grading during the fall semester.

OR: field-based course
PR: EASC 2401, 2702, 3055 and 3905; and permission of the Head of the Department

4910-4920 Special Topics in Earth Sciences are lecture and seminar courses given for undergraduates in their fourth or fifth year who wish to gain more specialized knowledge in a particular field of Earth Sciences than is possible through the standard course offerings. The Department will consider suggestions by students for Special Topics courses, but it must be borne in mind that such a course should normally be approved at least three months before the start of the semester in which it is to be taken.

PR: permission of the Head of Department

4950 Technical Report on Geoscience Employment requires the preparation of a publication-quality technical report, about 50 pages in length, based on a study undertaken during geoscience employment. The topic and scope of the study must be approved by the Head of Department prior to its commencement. Students will present a seminar or seminars on results of the project, and will be closely advised on proper organization and writing of scientific reports. Some directed reading will be required.

PR: completion of 9 credit hours in Earth Sciences at 3000 level, and permission of the Head of Department

499A and 499B Dissertation is an independent study of an approved problem in the Earth Sciences. The subject of study will be decided in consultation with Faculty Advisors and must be approved in advance by the Head of Department. The first semester will normally involve directed reading, supervised field and/or laboratory work, and preparation of a dissertation outline and draft of a first chapter of the thesis. The second semester will be devoted to data synthesis and interpretation, to a seminar presenting the thesis results, and to preparation of a formal written report accompanied by appropriate illustrations, to be submitted for grading one week before the end of classes.

CH: 6
PR: admission to the Honours program
UL: the dissertation cannot be based on the same study used to obtain credit for EASC 4950. May be used as Science credits by students not in the Honours program with permission of the Head of the Department.

8.6 Economics

For course descriptions, see Faculty of Arts section of the Calendar.
8.7 Geography
For course descriptions, see Faculty of Arts section of the Calendar.

8.8 Mathematics and Statistics
In the descriptions of the courses which follow, the symbol (F) represents the Fall and (W) represents Winter. These labels are intended to indicate the semester when the course is generally offered. Unlabelled courses are offered as demand or programs dictate and as resources permit. The Department tries to offer a variety of 1000-, 2000- and 3000-level courses during the Spring semester (or intersession or Summer session) every year. Students are encouraged to consult the Department regularly for specific planned offerings, semester by semester.

8.8.1 Foundation Courses
102F Mathematics Skills Program is intended for those students who either have a weak background in mathematics or are returning to the subject after some years. The program enables students to master mathematical operations such as those involving whole numbers, fractions, decimals, percents, integers, exponents, linear equations, algebraic and rational expressions, formulas, graphs, systems of linear equations, basic trigonometry, exponents and radicals, and quadratics.
CH: 0

102N Mathematics Skills Program for the B.N. (Collaborative) Program is a non-credit course intended for students of the B.N. (Collaborative) Program who have a weak background in mathematics and have not done mathematics in some years. The program enables students to master mathematical operations such as those involving whole numbers, fractions, decimals, percents, units of measurement, ratios and proportions.
CH: 0

103F Mathematics Skills Program is intended for those students who either have a weak background in mathematics or are returning to the subject after some years. The program enables students to master mathematical operations such as those involving whole numbers, fractions, decimals, percents, integers, exponents, linear equations, algebraic and rational expressions, formulas, graphs, systems of linear equations, basic trigonometry, exponents and radicals, and quadratics.
CH: 0
PR: Mathematics 102F

104F Mathematics Skills Program is intended for those students who either have a weak background in mathematics or are returning to the subject after some years. The program enables students to master mathematical operations such as those involving whole numbers, fractions, decimals, percents, integers, exponents, linear equations, algebraic and rational expressions, formulas, graphs, systems of linear equations, basic trigonometry, exponents and radicals, and quadratics.
CH: 0
PR: Mathematics 103F

8.8.2 Accelerated M103F/M1051 Mathematics Skills Program/Finite Mathematics II (W)
103F Mathematics Skills Program/Finite Mathematics II is a non-credit course enabling students to master mathematics operations such as those involving whole numbers, fractions, decimals, percents, integers, exponents, linear equations, algebraic and rational expressions, formulas, graphs, systems of linear equations, basic trigonometry and number systems. Mathematics 1051 is a credit course with topics including elementary matrices, linear programming, elementary number theory, mathematical systems and geometry.
CH: 0
CO: Mathematics 102F and a recommendation by an MLC instructor resulting in approval by the MLC Director
LH: three 50 minute classes and two 75 minute classes per week
PR: Mathematics 102F and a recommendation by an MLC instructor resulting in approval by the MLC Director

8.8.3 Common Core Mathematics Courses
Mathematics courses are designated by MATH.
1000 Calculus I (F) & (W) is an introduction to differential Calculus including logarithmic, exponential and trigonometric functions.
CR: the former 1081
LC: 4
PR: MATH 1090 or a combination of placement test and high school Mathematics scores acceptable to the Department

1001 Calculus II (F) & (W) is an introduction to integral Calculus with applications.
CR: the former Engineering 1411 or the former Engineering 2413
LH: one and one-half hour problem lab
PR: MATH 1000 or the former 1081

1031 Mathematical Problem Solving - inactive course.
1050 Finite Mathematics I (F) & (W) covers topics which include sets, logic, permutations, combinations and elementary probability.
CR: the former MATH 1150
LC: 4
PR: a combination of placement test and high school mathematics scores acceptable to the department or MATH 103F
UL: With the exception of those already admitted at the time of registration in this course to a Bachelor of Education program that requires this course, students who already have obtained credit for 6 or more Mathematics credit hours numbered 2000 or above are not permitted to register for this course nor can they receive credit for it.

1051 Finite Mathematics II (F) & (W) covers topics which include elementary matrices, linear programming, elementary number theory, mathematical systems, and geometry.
CR: the former MATH 1151
LC: 4
PR: a combination of placement test and high school mathematics scores acceptable to the department or MATH 103F
UL: With the exception of those already admitted at the time of registration in this course to a Bachelor of Education program that requires this course, students who already have obtained credit for 6 or more Mathematics credit hours numbered 2000 or above are not permitted to register for this course nor can they receive credit for it.

1090 Algebra and Trigonometry (F) & (W) provides students with the essential prerequisite elements for the study of an introductory course in calculus. Topics include algebra, functions and their graphs, exponential and logarithmic functions, trigonometry, polynomials, and rational functions.
CR: if previously completed or currently registered for MATH 1000, 1001, the former 1080, or the former 1081
LC: 4
PR: a combination of placement test and high school Mathematics scores acceptable to the Department or MATH 104F

2000 Calculus III (F) & (W) is a study of the differential calculus of functions of two variables, an introduction to convergence of infinite sequences and series.
CR: the former Engineering 1411, Engineering 1412, Engineering 2412, or Engineering 2413
LH: one and one-half hour problem lab
PR: MATH 1001

2050 Linear Algebra I (F) & (W) includes the topics: Euclidean n-space, vector operations in 2- and 3-space, complex numbers, linear transformations on n-space, matrices, determinants, and systems of linear equations.
CR: the former Engineering 2402
PR: A combination of placement test and high school Mathematics scores acceptable to the Department or 3 credit hours in first year Mathematics courses

2051 Linear Algebra II (F) & (W) includes the topics: real and complex vector spaces, basis, dimension, change of basis, eigenvectors, inner products, and diagonalization of Hermitian matrices.
PR: MATH 1000 and 2050

2075 Introduction to the History of Mathematics - inactive course.
2090 Mathematics of Finance covers the topics: simple and compound interest and discount, forces of interest and discount, equations of value, annuities and perpetuities, amortization schedules and sinking funds, bonds and other securities, contingent payments.
PR: MATH 1001

2091 Introduction to Actuarial Mathematics - inactive course.
3000 Real Analysis I (F) & (W) covers proof techniques, structure of the real numbers, sequences, limits, continuity, uniform continuity, differentiation.
CR: the former MATH 2001
LH: 1
PR: MATH 2000

3001 Real Analysis II (F) & (W) examines infinite series of constants, sequences and series of functions, uniform convergence and its consequences, power series, Taylor series, Weierstrass Approximation

AR = Attendance requirement; CH = Credit hours are 3 unless otherwise noted; CO = Co-requisite(s); CR = Credit can be retained for only one course of the set(s) consisting of the course being described and the course(s) listed; LC = Lecture hours per week are 3 unless otherwise noted; LH = Laboratory hours per week; OR = Other requirements of the course such as tutorials, practical sessions, or seminars; PR = Prerequisite(s); UL = Usage limitation(s).
8.8.4 Applied Mathematics Courses

Applied Mathematics courses are designated by AMAT.

2130 Technical Writing in Mathematics (W) is a project oriented course combining mathematical investigation and technical writing. By using computer programming, graphical and typesetting tools, students will explore mathematical concepts and will produce technical reports of professional quality. The latter will combine elements of writing and graphics to convey technical ideas in a clear and concise manner.
PR: admission to Applied or Pure Mathematics major and Mathematics 1001 (Computer Science 1510 or 1710 or 2710 or 2620; or permission of the Head of Department)
UL: qualifies as a Research/Writing course in the Faculty of Arts

3100 Introduction to Dynamical Systems (W) examines flows, stability, phase plane analysis, limit cycles, bifurcations, chaos, attractors, maps, fractals. Applications throughout.
CR: the former AMAT 3190
PR: AMAT 3260 or Pure Mathematics 3260

3111 Applied Complex Analysis examines mapping by elementary functions, conformal mapping, applications of conformal mapping. Schwarz-Christoffel transformation, Poisson integral formula, poles and zeros, Laplace transforms and stability of systems, analytic continuation.
PR: AMAT 3210 or Pure Mathematics 3210

3132 Numerical Analysis I (W) includes a discussion of round-off error, the solution of linear systems, iterative methods for nonlinear equations, interpolation and polynomial approximation, least squares approximation, fast Fourier transform, numerical differentiation and integration.
CR: Computer Science 3731
PR: Mathematics 2000, Mathematics 2050, and a computing course (Computer Science 1510 is recommended).

3161 Ordinary Differential Equations II (F) examines power series solutions, method of Frobenius, Bessel functions, Legendre polynomials and others from classical Physics, systems of linear first order equations, fundamental solution, numerical methods for initial value problems, existence and uniqueness of solutions.
PR: AMAT 3202 or Pure Mathematics 3202 and AMAT 3260 or Pure Mathematics 3280

3202 Vector Calculus (F) & (W) deals with functions of several variables, Lagrange multipliers, vector valued functions, directional derivatives, gradient, divergence, curl, transformations, Jacobians, inverse and implicit function theorems, multiple integration including change of variables using polar, cylindrical and spherical co-ordinates, Green's theorem, Stokes' theorem, divergence theorem, line integrals, arc length.
CR: AMAT 3202 or Pure Mathematics 3202, Physics 3810
PR: Mathematics 2000 and 2050

3210 Introduction to Complex Analysis (F) examines complex numbers, analytic functions of a complex variable, differentiation of complex functions and the Cauchy-Riemann equations, complex integration, Cauchy's theorem, Taylor and Laurent series, residue theory and applications.
CR: Pure Mathematics 3210
PR: Mathematics 3000

3240 Applied Graph Theory (F) examines algorithms and complexity, definitions and basic properties of graphs, Eulerian and Hamiltonian chains, shortest paths, graph colouring, planarity, trees, network flows, with emphasis on applications including scheduling problems, tournaments, and facilities design.
CR: the former Computer Science 2741, Pure Mathematics 3240
PR: Pure Mathematics 2320

3260 Ordinary Differential Equations I (F) & (W) examines direction fields, equations of first order and first degree, higher order linear equations, variation of parameters, methods of undetermined coefficients, Laplace transforms, systems of differential equations. Applications include vibratory motion, satellite and rocket motion, pursuit problems, population models and chemical kinetics.
CR: AMAT 3260 or Pure Mathematics 3260, the former Engineering 3411
PR: Mathematics 2000

4100 Applied Functional Analysis - inactive course.

4102 Stochastic Methods in Applied Mathematics - inactive course.

4130 Introduction to General Relativity (same as Physics 4220) studies both the mathematical structure and physical content of Einstein's theory of gravity. Topics include the geometric formulation of special relativity, curved spacetimes, metrics, geodesics, causal structure, gravity as spacetime curvature, the weak-field limit, geometry outside a spherical star, Schwarzschild and Kerr black holes, Robertson-Walker cosmologies, gravitational waves, an induction to tensor calculus, Einstein's equations, and the stress-energy tensor.
CO: AMAT 4230 or Pure Mathematics 4230
CR: Physics 4220
PR: AMAT 3202 or Pure Mathematics 3202 and one of Physics 3220, AMAT 4230 or Pure Mathematics 4230 or permission of the Head of Department.

4131 Numerical Linear Algebra - inactive course.

4132 Introduction to Optimization - inactive course.

4133 Numerical Optimization - inactive course.

4140 Introduction to Mathematical Control Theory - inactive course.

PR: AMAT 3202 or Pure Mathematics 3202 and AMAT 3260 or Pure Mathematics 3260

4161 Integral Equations - inactive course.

4162 Numerical Methods for Differential Equations covers numerical solution of initial value problems for ordinary differential equations by single and multi-step methods, Runge-Kutta, and predictor-corrector; numerical solution of boundary value problems for ordinary differential equations by shooting methods, finite differences and spectral methods; numerical solution of partial differential equations by the method of lines, finite differences, finite volumes and finite elements.
PR: AMAT 3132, 4160

PR: AMAT 4160

4180 Introduction to Fluid Dynamics (same as Physics 4205) covers basic observations, mass conservation, vorticity, stress, hydrostatics, rate of strain, momentum conservation (Navier-Stokes equation), simple viscous, and inviscid flows, Reynolds number, boundary layers, Bernoulli's and Kelvin's theorems, potential flows, water waves, thermodynamics.
CR: Physics 4205
PR: Physics 3220 and either AMAT 4160 or the former Physics 3821

4190 Mathematical Modelling (W) is intended to develop students' skills in mathematical modelling and competence in oral and written presentations. Case studies in modelling will be analysed. Students will develop a mathematical model and present it in both oral and report form.
PR: AMAT 3100, AMAT 3161, AMAT 4160, and a technical writing course offered by a Science department (AMAT 2130 is recommended).

419A and 419B Applied Mathematics Honours Project is a two-semester course that requires the student, with supervision by a member of the Department, to prepare a dissertation in an area of Applied Mathematics. In addition to a written project, a one hour presentation will be given by the student at the end of the second semester.
CH: 6
CR: the former AMAT 4199
PR: registration in an Honours or Joint Honours program in Applied Mathematics.

4230 Differential Geometry covers theory of curves, Frenet relations, curvature and torsion, singular points of curves, first and second quadratic forms, classification of points on a surface, Gaussian curvature, Gauss-Weingarten theorem, Christoffel's symbols, theoremo Egregium, Gauss-
8.8.5 Pure Mathematics Courses

Pure Mathematics courses are designated by PMAT.

2320 Discrete Mathematics (F) & (W) covers basic concepts of mathematical reasoning, sets and set operations, functions, relations including equivalence relations and partial orders as illustrated through the notions of congruence and divisibility of integers, mathematical induction, principles of counting, permutations, combinations and the Binomial Theorem.
CR: the former Computer Science 2740
PR: Mathematics 1001 or 2050

3202 Vector Calculus (F) & (W) deals with functions of several variables, Lagrange multipliers, vector valued functions, directional derivatives, gradient, divergence, curl, transformations, Jacobians, inverse and implicit function theorems, multiple integration including change of variables using polar, cylindrical and spherical co-ordinates, Green’s theorem, Stokes’ theorem, divergence theorem, line integrals, arc length.
CR: Physics 3810, Applied Mathematics 3202
PR: Mathematics 2000 and 2050

3210 Introduction to Complex Analysis examines complex numbers, analytic functions, Cauchy-Riemann equations, conformal mappings. Examination of points of continuity and discontinuity of complex functions. Examination of the Cauchy-Riemann equations, complex integration, Cauchy’s theorem, Taylor and Laurent series, residue theory and applications.
CR: Applied Mathematics 3210
PR: Mathematics 3000

3240 Applied Graph Theory examines algorithms and complexity, definitions and basic properties of graphs, Eulerian and Hamiltonian chains, shortest path problems, graph colouring, planarity, trees, network flows, with emphasis on applications including scheduling problems, tournaments, and facilities design.
CR: the former Computer Science 2741, Applied Mathematics 3240
PR: PMAT 2320

3260 Ordinary Differential Equations I examines direction fields, equations of first order and first degree, higher order linear equations, variation of parameters, methods of undetermined coefficients, Laplace transforms, systems of differential equations. Applications include vibratory motion, satellite and rocket motion, pursuit problems, population models and chemical kinetics.
CR: the former Engineering 3411, Applied Mathematics 3260
PR: Mathematics 2000

3300 Set Theory is an introduction to Mathematical Logic, functions, equivalence relations, equipotence of sets, finite and infinite sets, countable and uncountable sets, Cantor’s Theorem, Schroeder-Bernstein Theorem, ordered sets, introduction to cardinal and ordinal numbers, logical paradoxes, the axiom of choice.
PR: PMAT 2320

3303 Introductory Geometric Topology covers graphs and the four colour problem, orientable and non-orientable surfaces, triangulation, Euler characteristic, classification and colouring of compact surfaces, basic point-set topology, the fundamental group, including the fundamental groups of surfaces, knots, and the Wirtinger presentation of the knot group.
PR: PMAT 2320

3320 Abstract Algebra (F) is an introduction to groups and group homomorphisms including cyclic groups, cosets, Lagrange’s theorem, normal subgroups and quotient groups, introduction to rings and ring homomorphisms including ideals, prime and maximal ideals, quotient rings, integral domains and fields.
PR: PMAT 2320

3321 Applied Algebra - inactive course.

3330 Euclidean Geometry (F) is classical Euclidean geometry of the triangle and circle, the inversion transformation, including the theorem of Ptolemy, Elliptic and hyperbolic geometries.
PR: PMAT 2320 or Mathematics 2051

3331 Projective Geometry includes course topics; projective space, the principle of duality, mappings in projective space, conics and quadrics.
PR: PMAT 2320 or Mathematics 2051

3340 Introductory Combinatorics (W) includes topics: distributions, the binomial and multinomial theorems, Stirling numbers, recurrence relations, generating functions and the inclusion-exclusion principle. Emphasis will be on applications.
PR: PMAT 2320

3370 Introductory Number Theory (F) examines perfect numbers and primes, divisibility, Euclidean algorithm, greatest common divisors, primes and the unique factorization theorem, congruences, cryptography (secretary systems), Euler-Fermat theorems, power residues, primitive roots, arithmetic functions, Diophantine equations, topics above in the setting of the Gaussian integers.
PR: PMAT 2320

4230 Differential Geometry covers theory of curves, Frenet relations, curve and torsion, singular points of curves, first and second quadratic form, normal curvature, Gaussian curvature, Weingarten theorem, Christoffel’s symbols, theorem of Egregium, Gauss-Codazzi-Mainardi theorem, internal geometry of surfaces, isometric and conformal mappings, geodesic curvature and torsion, parallel displacement, Gauss-Bonnet theorem.
CR: Applied Mathematics 4230
PR: Applied Mathematics 3202 or PMAT 3202

4240 Differential and Integral Calculus on Manifolds - inactive course.

4280-4290 Special Topics in Pure and Applied Mathematics will have the topics to be studied announced by the Department. Consult the Department for a list of titles and information regarding availability.
PR: permission of the Head of the Department

8.8.6 Applied Mathematics Courses

Calculus courses are designated by PMAT.

2000 Differential and Integral Calculus on Manifolds - inactive course.

2480-2490 Special Topics in Pure and Applied Mathematics will have the topics to be studied announced by the Department. Consult the Department for a list of titles and information regarding availability.
PR: permission of the Head of the Department

2010-2011
Introduction to Complex Analysis
Complex Function Theory
Algebraic Topology

(Prerequisite(s) and Co-requisite(s))

AR = Attendance requirement; CH = Credit hours are 3 unless otherwise noted; CO = Co-requisite(s); CR = Credit can be retained for only one course from the set(s) consisting of the course being described and the course(s) listed; LC = Lecture hours per week are 3 unless otherwise noted; LH = Laboratory hours per week; OR = Other requirements of the course such as tutorials, practical sessions, or seminars; PR = Prerequisite(s); UL = Usage limitation(s).
4370 Number Theory is continued fractions, an introduction to Diophantine approximations, selected Diophantine equations, the Dirichlet product of arithmetic functions, the quadratic reciprocity law, and factorization in quadratic domains.
PR: PMAT 3370

4375 History of Mathematics - inactive course.

4399 Pure Mathematics Dissertation requires the student, with supervision by a member of the department, to prepare a dissertation in an area of Pure Mathematics. Although original research by the student will not normally be expected, the student must show an ability and interest to learn and organize material independently. A one hour presentation at the end of the semester will be given by the student.
PR: registration in an Honours or Joint Honours program in Pure Mathematics

4401 Probability Theory examines abstract measure and integration, probability concepts, random variables, independence, Borel-Cantelli lemmas, sums of independent random variables.
CR: Statistics 4401
PR: Mathematics 3000, PMAT 3410 or Statistics 3410

4402 Stochastic Processes - inactive course.

4410 Mathematical Statistics III examines multivariate normal distribution theory, applications to ANOVA and regression, other topics such as sequential tests, distribution of order statistics, nonparametrics and decision theory.
CR: Statistics 4410
PR: Mathematics 2051, PMAT 3411 or Statistics 3411

8.8.6 Statistics Courses

Statistics courses are designated by STAT.

2500 Statistics for Business and Arts Students (F) & (W) covers descriptive statistics including histograms, stem-and-leaf plots and box plots), elementary probability, discrete random variables, the binomial distribution, the normal distribution, sampling distribution, estimation and hypothesis testing including both one and two sample tests, paired comparisons, chi-square test, correlation and regression. Related applications.
CR: STAT 2510, 2550, Psychology 2910, 2925 and the former 2900.
LH: one 90 minute lab per week. Statistical computer packages will be used in the laboratory, but no prior computing experience is assumed.
PR: Mathematics 1000 or credit hours in year courses in Mathematics or registration in at least semester three of a Bachelor of Nursing program or permission of the Head of Department.

2501 Further Statistics for Business and Arts Students (F) covers power calculation and sample size determination, analysis of variance, multiple regression, nonparametric statistics, index numbers, time series analysis, introduction to sampling techniques.
CR: STAT 2560, the former 2511, Psychology 2911, 2950, and the former 2901.
LH: one 90 minute lab per week. Statistical computer packages will be used in the laboratory.
PR: STAT 2500 or 2510

2510 Statistics for Physical Science Students (F) & (W) examines elements of probability, conditional probability, Bayes’ Theorem, discrete random variables, cumulative distribution function, introduction to continuous random variables, mathematical expectation, estimation of mean, proportion and variance, hypothesis testing for one-sample case. This course is normally offered twice a year, including the Fall.
CR: STAT 2500, 2550, Psychology 2910, 2925, the former 2900, the former Engineering 3423 and 4421
LH: one 90 minute lab per week
PR: Mathematics 1000 or the former 1081

2550 Statistics for Life Science Students (F) & (W) & (S) is an introduction to basic statistics methods with an emphasis on applications to life sciences and, in particular, to biology. Material includes descriptive statistics, elementary probability, binomial distribution, normal distribution, sampling distribution, estimation and hypothesis testing (both one and two sample cases), chi-square test, one way analysis of variance, correlation and simple linear regression.
CR: STAT 2500, 2510, Psychology 2910, 2925, and the former 2900
LH: one 90 minute lab per week. Statistical computer packages will be used in the laboratory, but no prior computing experience is assumed.
PR: Mathematics 1000 or the former 1081

2560 Further Statistics for Science Students (W) (formerly STAT 2511) covers estimation and hypothesis testing in the two-sample and paired sample cases, one way and two way analysis of variance, simple and multiple linear regression, chi-square tests, non-parametric tests including sign test, Wilcoxon signed rank test and Wilcoxon rank test.
CR: STAT 2501, the former 2511, Psychology 2911, 2950, and the former 2901
LH: one 90 minute lab per week. Statistical computer packages will be used in the laboratory, but no prior computing experience is assumed.
PR: STAT 2500 (with Mathematics 1000 or the former 1081) or STAT 2510

3410 Mathematical Statistics I covers basic probability concepts, combinatorial analysis, conditional probability, independence, random variable, distribution function, mathematical expectation, Chebyshev's inequality, distribution of two random variables, binomial and related distributions, Poisson, gamma, normal, bivariate normal, t, and F distributions, transformations of variables including the moment-generating function approach.
CR: Pure Mathematics 3410
OR: one and a half hour tutorial per week
PR: Mathematics 2000

CR: Pure Mathematics 3411
OR: one and a half hour tutorial per week
PR: Pure Mathematics 3410 or STAT 3410

3520 Experimental Design I (F) is an introduction to basic concepts in experimental design, single factor designs including completely randomized, randomized blocks, Latin square and related designs, multiple comparison tests, fixed and random effects models, introduction to factorial design.
CR: Psychology 3900 and 3950
PR: Mathematics 2500 and either Pure Mathematics 3411 or STAT 3411 or both 1001 and one of STAT 2501 or 2560 or the former 2511

3521 Regression (W) covers inferences in linear regression analysis, matrix approach to regression analysis, multiple linear regression, model selection, polynomial regression, indicator variable, problem of simultaneous inferences, multicollinearity.
PR: Mathematics 2500 and either Pure Mathematics 3411 or STAT 3411 or both Mathematics 1001 and one of STAT 2501 or 2560 or the former 2511

3530 Survey Sampling I (F) covers basic concepts, randomization, sampling frames, stratified sampling, the analysis of subclasses, cluster sampling, stratified cluster sampling, unequal clusters, ratio estimates selection with probabilities proportional to size.
PR: either Pure Mathematics 3411 or STAT 3411 or both Mathematics 1001 and one of STAT 2501 or 2560 or the former 2511

3540 Time Series I covers Autocovariance, autocorrelation and correlation, stationarity, autoregressive, moving average and ARMA models, differencing, the integrated ARMA process, parameter estimation, model identification and diagnostic testing, forecasting, seasonal models, the use of data transformation.
PR: either Pure Mathematics/STAT 3411 or both Mathematics 1001 and one of STAT 2501 or 2560 or the former 2511

3570 Reliability and Quality Control is an analysis of life, mortality and failure data, standard parametric models in reliability, quality control charts and cumulative sum charts, tolerance limits, contingency tables, interactions, application of sequential sampling.
PR: either Pure Mathematics 3411 or STAT 3411 or both Mathematics 1001 and one of STAT 2501 or 2560 or the former 2511

4401 Probability Theory is a review of Riemann integration, outer measure, measure, measureable sets, measurable functions, the Lebesgue integral, properties of the Lebesgue integral, sequences of integrals, Fubini’s theorem.
CR: Pure Mathematics 4401
PR: Mathematics 3000, Pure Mathematics 3410 or STAT 3410

4402 Stochastic Processes covers stochastic processes, stationarity, random walks, Markov chains, renewal, and queuing.
CR: Applied Mathematics 4102, Pure Mathematics 4402
PR: Pure Mathematics 3410 or STAT 3410

4410 Mathematical Statistics III examines multivariate normal distribution theory, applications to ANOVA and regression, other topics such as sequential tests, distribution of order statistics, nonparametrics and decision theory.
CR: Pure Mathematics 4410
PR: Mathematics 2051, Pure Mathematics 3411 or STAT 3411

4520 Experimental Design II (W) covers selected topics in ANOVA and ANCOVA including factorial experiments and unbalanced designs.
PR: STAT 3520

4530 Survey Sampling II (W) covers area sampling, multi-stage sampling,
two-phase sampling, ratio, regression and difference estimates, composite sampling designs, sampling from imperfect frames, bias and non-sampling errors.

PR: Mathematics 2000 and STAT 3530

4540 Time Series II is an analysis of time series in the time domain, including stationary and non-stationary processes, autocovariance kernels and their estimators, analysis of autoregressive and moving average models, spectral analysis including the power spectrum and its estimators, periodogram, smoothed and filtered spectra and their confidence limits.

PR: Pure Mathematics 3411 or STAT 3411 and STAT 3540

4550 Non-parametric Statistics covers inferences concerning location based on one sample, paired samples or two samples, inferences concerning scale parameters, goodness-of-fit tests, association analysis, tests for randomness.

PR: one of STAT 3520 or 3521, or Pure Mathematics 3411 or STAT 3411

4560 Continuous Multivariate Analysis examines the multivariate normal distribution and its marginal and conditional distributions, properties of the Wishart distribution, Hotelling's T-squared statistic, a selection of techniques chosen from among MANOVA, multivariate regression, principal components, factor analysis, discriminant and classification, clustering.

PR: Pure Mathematics 2051, Pure Mathematics 3410 or STAT 3410 and one of STAT 3520, or Pure Mathematics 3411 or STAT 3411, or STAT 3521

4561 Discrete Multivariate Analysis is an analysis of cross-classified categorical data, chi-square test, measures of association, multidimensional contingency tables, hypotheses of partial and conditional independence, log-linear models, association, multinomial and product-multinomial sampling schemes, iterative scaling technique for maximum likelihood estimation, step-wise model selection procedures, partitioning chi-square, explanatory and response variables in contingency tables, logit models.

PR: STAT 3520 or 3521

4580 History of Statistics - inactive course.

4581 Quantitative Methods in Biology - inactive course.

4585 Computational Statistics is an introduction to modern computational statistics, using a statistical programming language, such as S-Plus. Emphasis is placed on use of the computer for numerical and graphical exploratory data analysis, and on crafting programs to accomplish specialized statistical procedures.

PR: Mathematics 2000, STAT 3520, 3521. Applied Mathematics 2130 or the former Pure Mathematics 2130 is recommended

4590 Statistical Analysis of Data I is for users of Statistics with emphasis placed on computer analysis of statistical problems drawn from various disciplines, descriptive statistics, analysis of univariate measurement data, chi-square tests, non-parametric tests, basic ANOVA and regression.

LH: one 90 minute lab per week

PR: one of STAT 3520, or 3521, or Pure Mathematics 3411 or STAT 3411

4591 Statistical Analysis of Data II - inactive course.

4599 Honours Comprehensive with Directed Readings is a directed reading course with Comprehensive examination.

PR: registration in an Honours Joint Honours program in Statistics

8.9 Physics and Physical Oceanography

Physics courses are designated by PHYS.

1020 Introductory Physics I (F) & (W) is a non-calculus based introduction to mechanics. This course may be completed by someone who has no physics background provided some extra effort is made.

CO: Mathematics 1090
CR: PHYS 1050
LH: 3; six laboratory sessions per semester
OR: optional tutorials will be available, on average one hour per week
PR: Level III Advanced Mathematics or Mathematics 1090. It is recommended that students have completed at least one of level II and level III high school physics courses

1021 Introductory Physics II (F) & (W) is a non-calculus based introduction to fluids, wave motion, light, optics, electricity and magnetism.

CO: Mathematics 1000
LH: 3; normally there will be six laboratory sessions per semester
OR: optional tutorials will be available, on average one hour per week
PR: PHYS 1020 and PHYS 1050 and Mathematics 1090 or 1000

1050 General Physics I: Mechanics (F) & (W) is a calculus based introduction to mechanics. The course will emphasize problem solving. For more details regarding PHYS 1050, see Note 4 under Physics and Physical Oceanography.

CO: Mathematics 1000
CR: PHYS 1020

1051 General Physics II: Oscillations, Waves, Electromagnetism (F) (W) (S) is a calculus based introduction to oscillations, waves, motion, physical optics and electromagnetism.

CO: Mathematics 1001
LH: 3; normally there will be six laboratory sessions per semester
OR: optional tutorials will be available, on average one hour per week
PR: PHYS 1050, or 1021, or 1020 (with a minimum grade of 65%) and Mathematics 1001

2053 Fluids and Thermal Physics (F) examines elasticity, fluid mechanics, thermodynamics, kinetic theory and statistical mechanics.

CO: Mathematics 1001 and PHYS 1051
LH: 3
PR: Mathematics 1001 and PHYS 1051

2055 Electricity and Magnetism (W) examines Gauss’ Law, the electrostatic potential, capacitance, magnetic forces and the magnetic field, electromagnetic induction, magnetic materials, ac circuits, superconductivity, and quantum superposition and measurement current and Maxwell’s equations.

CO: Mathematics 2000
LH: 3
PR: Mathematics 2000 and PHYS 1051

PR: 6 credit hours in Mathematics courses at the first year level

2750 Modern Physics (W) covers special relativity, quanta of light, atomic structure and spectral lines, quantum structure of atoms and molecules, nuclei and elementary particles.

CO: Mathematics 1001 and PHYS 1051
CR: PHYS 2056
PR: Mathematics 1001 and PHYS 1051

2820 Computational Mechanics (F) & (W) covers Newtonian dynamics and celestial mechanics, numerical differentiation and integration, numerical solutions to mechanics problems, data and spectral analysis, Fourier series and normal modes, oscillations and vibrations, linear and non-linear oscillators, nonlinear dynamics and chaos.

CO: Mathematics 2000
LC: 5
LH: 5
PR: PHYS 1051, Mathematics 2000

3000 Physics of Device Materials (F) is structures of crystalline and amorphous solids. Excitations and transport in metals, semiconductors, and dielectrics; electronic band structures. Physics of multi-material devices including photodiodes, solid state lasers, and field-effect transistors.

PR: PHYS 2055 or registration in Academic Term 3 of the Electrical Engineering Program

3150 Astrophysics I (W) is a review of macroscopic and microscopic physics. The sun: luminosity, mass, spectrum, photosphere, corona, interior. Principles of stellar structure; radiative and convective transport of energy. The black hole theorem. Thermonuclear fusion; temperature dependence of the solar neutrino problem. Nucleosynthesis; the curve of binding energy; the synthesis of heavy elements. White dwarfs, neutron stars, and black holes; degenerate electron and neutron gases; Chandrasekhar's Limit. Population I and Population II stars; the Hertzsprung-Russell diagram; reise noted; among luminosity, mass, and effective temperature for main sequence dwarfs. Evolution of post main sequence stars.

PR: PHYS 2053, 2750 (or 2056), and 2820

3151 Astrophysics II covers stellar spectra and classification of stars. Hertzsprung-Russell diagram; equations of stellar structure for a star in equilibrium; temperature and density dependencies of nuclear processes, Formation and classification of binary stars; mass and energy transfer in binary star systems; semidetached binaries; cataclysmic variables, pulsars, etc. Galaxies and galactic structure; active galactic nuclei; cosmological redshift. Cosmology.

PR: PHYS 3150 and 3220

CO: PHYS 2820 and Applied Mathematics 3260 or Pure Mathematics 3260
PR: PHYS 2820 and Applied Mathematics 3260 or Pure Mathematics 3260

PR: PHYS 3220 and 3810 (or Applied Mathematics 3202 or Pure
3300 Introduction to Physical Oceanography (F) deals with the physics of processes in the ocean, but provides an integrated view of the whole field of oceanography. The importance of physical processes to other aspects of oceanography is treated.
PR: PHYS 2053 and Mathematics 2000

3340 Principles of Environmental Physics will explore the basic physical principles of light, heat, energy and sound in the natural environment. Several key aspects of physics in the environment will be covered including climate and the physical evolution of the planet and the present role of the atmosphere and ocean spectrocop in the atmosphere and measurement and observation of the atmosphere; principles of energy generation and pollution transport in the atmosphere and ocean.
PR: Mathematics 2000 and PHYS 2053

PR: Mathematics 2000, PHYS 2053 and PHYS 2750 or 2056

3500 Electromagnetic Fields I (F) examines electrostatic Field: field, potential, Poission's equation, Laplace's equation, capacitance, dielectrics, polarization, electric displacement, boundary conditions. Magnetic Field: electric current and magnetic field, vector potential, Lorentz force and relativity, changing magnetic field, inductance, magnetic materials, magnetization, Maxwell's equations.
PR: PHYS 2055 and 3810 (or Applied Mathematics 3202 or Pure Mathematics 3202)

CO: Applied Mathematics 3260 or Pure Mathematics 3260
CR: EN 3821
LC: 6
PH: Mathematics 2050, PHYS 2055 and Applied Mathematics 3260 or Pure Mathematics 3260

3551 Analogue Electronics (S) is a review of network analysis. Feedback. Electron tubes. Semiconductor diodes. Introduction to transistors. Introduction to amplifiers. Small signal models. Small signal analysis of amplifiers. Operational amplifiers. Selected topics in circuit design such as biasing, voltage regulators and power circuits. Noise. This course is recommended for students with an interest in experimental Physics.
LC: 6
PH: PHYS 3550 and Applied Mathematics 3260 or Pure Mathematics 3260

PR: Mathematics 2000 and PHYS 2055

CO: PHYS 3200 and 3810 (or Applied Mathematics 3202 or Pure Mathematics 3202)
PR: PHYS 2750 (or 2056), 3220 and 3810 (or Applied Mathematics 3202 or Pure Mathematics 3202)

PR: PHYS 3750

3800 Computational Physics is a project-based course intended to train students to become functional in computational methods, by writing and compiling computer code (C/fortran) in a Unix environment to solve problems drawn from different areas of physics. Students will complete several projects selected from different areas of physics. Projects will introduce the students to a particular class of numerical methods. Lectures and tutorials will cover the theory that underlies the computational methods and background for code development and the application of the required numerical methods.
CO: Any two 2000-level Physics course plus at least one other 3000-level Physics course
LC: 5
PH: 5
PR: Computer Science 1510, PHYS 2820, Mathematics 3202, Mathematics 3260

3810 Mathematical Analysis (F) - inactive course.

PR: Applied Mathematics 3260 or Pure Mathematics 3260, and PHYS 3810 (or Applied Mathematics 3202 or Pure Mathematics 3202)

3890 Physics Laboratory I (W) is a selection of experiments based primarily on material covered in the third year courses.
LC: 6
PH: at least two of PHYS 2053, 2820, 2055, and PHYS 2750 (or 2056)

4000 Solid State Physics covers crystal structure and binding, phonons and lattice vibrations, thermal properties of solids. Electrons in solids, energy bands, semi-conductors, superconductivity, dielectric properties. Magnetic properties of solids.
PR: PHYS 3400 and 3750 or waiver approved by the instructor

4200 Classical Mechanics III - inactive course.

4205 Introduction to Fluid Dynamics (same as Applied Mathematics 4180) covers basic observations, mass conservation, vorticity, stress, hydrostatics, rate of strain, momentum conservation (Navier-Stokes equation), simple viscous and inviscid flows, Reynolds number, boundary layers, Bernoulli’s and Kelvin’s theorems, potential flows, water waves, thermodynamics.
CR: Applied Mathematics 4180
PR: PHYS 3220 and either Applied Mathematics 4160 or the former PHYS 3821 or waiver approved by the instructor

4210 Continuum Mechanics - inactive course.

4220 Introduction to general Relativity (same as Applied Mathematics 4130) studies both the mathematical structure and physical content of Einstein’s theory of gravity. Topics include the geometric formulation of special relativity, curved spacetimes, metrics, geodesics, causal structure, gravity as spacetime curvature, the weak-field limit, geometry outside a spherical star, Schwarzschild and Kerr black holes, Robertson-Walker metrics, the cosmologies, gravitational waves, an instruction to tensor calculus, Einstein’s equations, and the stress-energy tensor.
CO: Applied Mathematics 4230 or Pure Mathematics 4230
CR: Applied Mathematics 4130
PR: Applied Mathematics 3202 or Pure Mathematics 3202 and one of PHYS 3220, Applied Mathematics 4230 or Pure Mathematics 4230 or waiver approved by the instructor

4300 Advanced Physical Oceanography (W) covers fundamental properties of seawater and techniques of oceanographic measurement. The dynamical equations of oceanography are derived and solutions explored by comparison with oceanic observations. Properties of waves in rotating and non-rotating fluids. Linear and non-linear wave theory are developed.
PR: PHYS 3300 and 3820 or registration in Academic term 6 of the Ocean and Naval Architectural Engineering program, or waiver approved by the instructor

4330 Topics in Physical Oceanography - inactive course.

4340 Modelling in Environmental Physics covers the basic principles underlying environmental modelling will be developed and techniques for modelling presented and applied. Techniques for numerical modelling will be determined and simple numerical models will be developed for use in terrestrial, atmospheric and oceanic environments. Free and forced systems will be discussed and the transition to chaos and some aspects of chaotic dynamics will be studied. Techniques for numerical modelling will be determined and simple numerical models will be developed for use in atmospheric, oceanic and environmental sciences. Free and forced systems will be discussed and the transition to chaos and some aspects of chaotic dynamics will be studied.
PR: PHYS 3300 and PHYS 3820 or waiver approved by the instructor

CO: PHYS 3750
PR: PHYS 3400 and 3750

underlying human development from the prenatal stage to adolescence. Topics covered will include sensorimotor, linguistic, perceptual, cognitive and motivational changes.

CR: PSYC 2025, PSYC 3050
PR: PSYC 1000 and 1001

2011 The Psychology of Human Development II is an examination of relevant research on socialization and personality development with special emphasis on attachment, imitation, sex role and moral development in childhood and adolescence.

CR: PSYC 2025
PR: PSYC 1000 and 1001

2012 Adult Development from Young Adulthood to Old Age examines physical and psychological changes from early adulthood until the end of the lifespan. Topics include career choices, love partnerships, parenting and grandparenting, cognitive changes, interpersonal changes, and healthy aging.

CR: the former PSYC 3052
PR: PSYC 1000 and 1001

2100 Attitudes and Social Cognition is an examination of the concepts and principles involved in the interaction between the individual and others. Emphasis will be on the theoretical and empirical concerns of attitude formation and change, social perception, and social cognition.

CR: PSYC 2125, PSYC 3100
PR: PSYC 1000 and 1001

2120 Interpersonal and Group Processes - inactive course.

2150 Introduction to Forensic Psychology will provide an in-depth overview of the relationship between psychology and the law. A variety of topics will be discussed and critically evaluated, including the use and misuse of psychology-based investigative methods such as offender and geographic profiling, detection of deception, investigative interviewing, eyewitness testimony, jury decision-making, corrections and treatment, risk assessment, and criminal responsibility.

CR: PSYC 1000 and 1001

2240 Survey of Learning is a survey of learning phenomena and learning theories. Topics to be studied will include a selection of the following: the evolutionary context of learning, habituation and sensitization, Pavlovian conditioning, instrumental learning, and generalization and discrimination in learning. Applications of learning principles to topics such as child rearing, education, drug use and rehabilitation, as well as to other topics of contemporary interest, will also be discussed.

CR: PSYC 3250, the former PSYC 2225, the former PSYC 2250
PR: PSYC 1000 and 1001

2440 Human Memory and Cognition is an introduction to the basic principles of human memory and information processing. Topics covered will include the organization, representation and retrieval of information in memory, attention, pattern recognition, language processing, mental imagery, reasoning, problem solving, and decision making. There will be an emphasis on the application of basic principles to real life situations.

CR: PSYC 3450, PSYC 2425
PR: PSYC 1000 and 1001

2540 Psychology of Gender is an examination of the influence of gender on development and socialization, attitude formation, cognition, personality and mental health.

PR: PSYC 1000 and 1001

2560 Intelligence - inactive course.

2610 Personality is a review of the research and theory pertaining to a psychological understanding of human personality.

CR: the former PSYC 2620, PSYC 2625, PSYC 3620
PR: PSYC 1000 and 1001

2800 Drugs and Behaviour is an examination of the neurophysiology of drug action, the measurable effect of drugs on experimentally controlled behaviour, and a survey of information available on common self-administered drugs and their immediate and long-term effects.

PR: PSYC 1000 and 1001

2820 Brain and Behaviour is a broad survey of physiological psychology at an elementary level. Topics will include the following: structure of the nervous system, nerve conduction, sensory and motor systems, behavioural
biology of reproduction, aggression, feeding and drinking, sleep and arousal, pleasure and pain, learning and memory.

PR: PSYC 2825, the former PSYC 2850, PSYC 3801

2920 Research Methods in Psychology for Non-Majors provides an introduction to the design, understanding, and application of psychological research. Topics covered include understanding and applying scientific method, creating and testing hypotheses, constructing reliable and valid experiments, and the proper use of controls. An emphasis will be placed on thinking critically about psychology and common errors of judgment.

PR: PSYC 1000 and 1001

UL: cannot be used towards the Psychology major or any Psychology honours or joint honours programs

3430 The Psychology of Thinking will present theories and experimental studies of problem solving, creativity and decision making. Topics covered will include the difficulties encountered in problem solving and solutions such as strategies for organizing and representing information, the production of ideas, transfer and discovery learning.

PR: PSYC 1000 and 1001

3501 Industrial Psychology is an examination of the theories and concepts of industrial psychology. Topics covered will include research and testing methods, measuring job and performance appraisal systems, personnel selection methods, personnel training and development, work motivation, work stress, designing work for people, and human engineering.

PR: any 2000-level course in Psychology.

3533 Sexual Behaviour covers the most important aspects of human sexuality with a psychology theory and research framework. The course will examine the biological, behavioural and socio-cultural bases of the human sexual responses. Topics include sexual responses and communication, contraception, sexually transmitted infections, reproduction, sexual orientation, transgender and intersex, variations in sexual behaviour, sex and gender, sexual dysfunction and therapy, and sexual coercion.

PR: PSYC 1000 and 1001

3577 Program Evaluation - inactive course.

3640 The Psychology of Abnormal Behaviour covers problems of definition, the history of beliefs about abnormal behaviour and the implication of a behavioural model for the understanding and control of behaviour problems.

CR: PSYC 3650, PSYC 3626

PR: any 2000 level course in Psychology

4810 Human Neuropsychology - inactive course.

8.10.2 Majors Courses

These courses are restricted to Majors in Psychology and Behavioural Neuroscience.

2520 Mind and Brain is based on the idea that psychological and neuroscience research efforts are synergistic. Neuroscience research can reveal mechanisms that help explain the mind and behavior, while concepts developed by psychological research often define the topics that neuroscience investigates. Topics such as memory, emotion, mental illness, and sleep will illustrate the utility of multiple research perspectives for developing a more complete understanding of psychological issues.

PR: PSYC 1000 and 1001 and admission to a Major in Psychology or Behavioural Neuroscience; minors may be permitted to take this course if space permits

2570 Understanding Individual Differences uses current conceptualizations of personality and ability as a focus. The course will review issues related to the measurement of individual differences, including test characteristics and ethics. Research from a variety of perspectives will be used to illustrate the contributions of different areas of psychology to our understanding of individual differences.

PR: PSYC 1000 and 1001 and admission to a Major in Psychology or Behavioural Neuroscience; minors may be permitted to take this course if space permits

2910 Research Methods in Psychology I is an introduction to the design and application of psychological research with particular concentration on understanding and applying scientific method, creating and testing hypotheses, constructing reliable and valid experiments, and the proper use of controls. An emphasis will be placed on thinking critically about psychology and common errors of judgment.

CR: Statistics 2500, 2510, 2525, the former PSYC 2900, 2925

LH: one laboratory period weekly

PR: PSYC 1000 and 1001; Mathematics 1000 or two of 1090, 1050 and 1051 (or equivalent) and admission to a Major in Psychology or Behavioural Neuroscience

2911 Research Methods in Psychology II covers research methods in psychology with a focus on more complex research designs and statistical approaches, within the realm of experimentation and beyond the laboratory. Specific topics include controlling participant variables, using between and repeated measures designs within the context of Analysis of Variance (ANOVA). Particular ANOVA approaches include one-way and factorial designs, within subject design, and mixed designs.

CR: Statistics 2501, 2560, the former PSYC 2901, 2950

LH: one laboratory period weekly

PR: PSYC 2910 and admission to a Major in Psychology or Behavioural Neuroscience

3050 Developmental Psychology is an examination of the methods of study and an evaluation of current findings and theoretical issues of importance to an understanding of development. Topics will be drawn from perception, learning, cognition, social learning, memory and language development.

CR: PSYC 2100, PSYC 2125

PR: PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3100 Social Psychology is an examination of the concepts and principles involved in social behaviour. Topics covered will include attitudes, social cognition, interpersonal relations, and group processes.

CR: PSYC 2100, PSYC 2125

PR: PSYC 2520, 2570, and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3250 Learning (formerly PSYC 2250) examines how organisms adjust their behaviour to regularities in the environment as a result of experience.

CR: PSYC 2240, the former PSYC 2225, the former PSYC 2250

PR: PSYC 2520, 2570, and 2911, and admission to a Major in Psychology or Behavioural Neuroscience

3350 Perception (formerly PSYC 2360) is a broad survey of theory and research in sensation and perception.

CR: the former PSYC 2360

PR: PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3450 Human Cognition is an introduction to the experimental study of the mental representations and processes involved in human cognition. Topics such as attention, perception and pattern recognition, concepts and organisation of knowledge, language processes, mental imagery, reasoning, problem solving, decision making and skilled performance will be covered with an emphasis on experimental analysis and techniques.

CR: PSYC 2440, PSYC 2425

PR: PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3620 Personality Theory and Research is a survey of personality theory and research.

CR: PSYC 2610, PSYC 2625, and the former PSYC 2620

PR: PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3650 Abnormal Psychology is an examination of the nature, explanation and treatment of psychological disorders with an emphasis on research methods and current findings.

CR: PSYC 3640, PSYC 3626

PR: PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3750 Animal Behaviour I is an introduction to the mechanisms, development, function and evolution of behaviour in animals. Topics include the history of ethology and comparative psychology, and behavioural ecology; methods of animal behaviour study, behaviour in animals in relation to physiology, learning, communication, mating systems, and other areas in Biology and Psychology.

CR: Biology 3750

PR: Biology 1001, 1002 and PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3800 Neuroeconomics addresses the structure and function of neurons and neural circuits and examines principles of electrochemical neural communication at the macroscopic, microscopic and molecular level. The fundamental role of this knowledge to understanding brain mechanisms of normal and diseased brain functions will be touched upon. The molecular basis of the formation of some types of memories will be explored.

CR: PSYC 2520, 2570 and 2911 and admission to a Major in Psychology or Behavioural Neuroscience

3801 Behavioural Neuroscience is a survey of knowledge about brain mechanisms of behaviour. Topics will include the following: basic neuroanatomy and neurophysiology, somatosensory systems and pain, reward, mental illness, sleep and arousal, developmental neurobiology, sexual development and behaviour, regulation of eating and body weight, learning and memory, and cortical function, including cortical mediation of language.

CR: PSYC 2810, PSYC 2825, the former PSYC 2850
3900 Design and Analysis III is a course on complex and specialized research design in Psychology. Multifactor research designs that employ both between- and within-subjects independent variables. Advantages and disadvantages of using multifactor research designs to test psychological hypotheses. Hierarchical designs and incomplete factorials. The use of covariates and blocking to increase experimental precision. Problems created by missing data. Single subject designs. How to answer specific psychological questions in the context of complex designs. The design and analysis of non-experimental psychological research. Applications of such techniques as the analysis of variance and multiple linear regression to the data obtained with these research designs, with special attention to problems inherent in psychological research.

CR: PSYC 3950, Statistics 3520
LH: one laboratory period weekly
PR: PSYC 2911 and admission to a Major in Psychology or Behavioural Neuroscience

4050 Selected Topics in Developmental Psychology I
PR: PSYC 3050 or the former 3051 and admission to a Major in Psychology or Behavioural Neuroscience

4051 Selected Topics in Developmental Psychology II
PR: PSYC 3050 or the former 3051 and admission to a Major in Psychology or Behavioural Neuroscience

4070 Research Experience in Development Psychology allows students to gain research experience in selected areas of developmental psychology.
PR: PSYC 2520, 2570, 2911, and 3050 and admission to a Major in Psychology or Behavioural Neuroscience

4150 Selected Topics in Social Psychology I
PR: PSYC 3100 or the former PSYC 3160 and admission to a Major in Psychology or Behavioural Neuroscience

4151 Selected Topics in Social Psychology II - inactive course.

4152 Selected Topics in Applied Social Psychology - inactive course.

4160 Psychology and the Law allows students, upon completion of this course, to demonstrate an advanced understanding of psychology and the law. Specifically, students will be able to discuss and critically evaluate topics related to the Canadian legal system, police investigations, memory, legal contexts, jury selection, jury decision-making, sentencing, parole, offender assessment and treatment, fitness to stand trial, and forensic civil psychology.
PR: PSYC 3100 or the former PSYC 3160 and admission to a Major in Psychology or Behavioural Neuroscience

4170 Research Experience in Social Psychology will provide research experience in a selection of areas typically studied by social psychologists such as attitudes, prejudice, groups and social cognition. Students will acquire experience with research methods that are used to advance the body of knowledge in social psychology.
PR: PSYC 2520, 2570, 2911, and 3100 and admission to a Major in Psychology or Behavioural Neuroscience

4250 Selected Topics in Learning and Motivation I
PR: the former PSYC 2250 or PSYC 3250 and admission to a Major in Psychology or Behavioural Neuroscience

4251 Selected Topics in Learning and Motivation II
PR: the former PSYC 2250 or PSYC 3250 and admission to a Major in Psychology or Behavioural Neuroscience

4260 Learning Processes and Drug Effects focuses on explanations of the behavioural effects of drugs that can be found in learning and conditioning theory. This course will provide a careful examination of such processes as drug state conditioning and discrimination, drug effects on operant behaviour, drug self-administration and tolerance.
PR: the former PSYC 2250 or PSYC 3250 and admission to a Major in Psychology or Behavioural Neuroscience

4270 Research Experience in Learning allows students to gain research experience in selected areas of learning.
PR: PSYC 2520, 2570, 2911, and 3250 and admission to a Major in Psychology or Behavioural Neuroscience

4350 Selected Topics in Perception I is an intensive examination of a specific topic of current interest in perception.
PR: the former PSYC 2360 or PSYC 3350 and admission to a Major in Psychology or Behavioural Neuroscience

4351 Selected Topics in Perception II is an intensive examination of a specific topic of current interest in perception.
PR: the former PSYC 2360 or PSYC 3350 and admission to a Major in Psychology or Behavioural Neuroscience

4370 Research Experience in Perception allows students to gain research experience in selected areas of perception.
PR: PSYC 2520, 2570, 2911 and 3350 and admission to a Major in Psychology or Behavioural Neuroscience

4400 Selected Topics in Cognition I
PR: PSYC 3450 and admission to a Major in Psychology or Behavioural Neuroscience

4401 Selected Topics in Cognition II
PR: PSYC 3450 and admission to a Major in Psychology or Behavioural Neuroscience

4402 Selected Topics in Cognitive Science provides an in-depth examination of current issues in cognitive science from a psychological perspective.
PR: two courses chosen from PSYC 3050, 3250, 3350, 3450, 3801 and admission to a Major in Psychology or Behavioural Neuroscience

4452 Selected Topics in Cognition: Reading is a survey of the research literature on the development of reading skills including a discussion of dyslexia.
PR: PSYC 3450 and admission to a Major in Psychology or Behavioural Neuroscience

4461 Psycholinguistics (formerly PSYC 3400) is the psychological approach to the study of language concentrating particularly on the areas of speech, meaning, grammar and communication. The research topics to be discussed include the child’s acquisition of language, bilingualism, teaching language to animals, and social factors in language use.
PR: PSYC 3050 or 3450 and admission to a Major in Psychology or Behavioural Neuroscience

4462 Human Memory surveys theories and research about how humans remember information and why they forget. Topics include research on sensory memory, short-term working memory, amnesia, forgetting, memory development, and semantic memory as well as practical issues such as how to improve memory.
PR: PSYC 3450 and admission to a Major in Psychology or Behavioural Neuroscience

4470 Research Experience in Cognition allows students to gain research experience in selected areas of cognition.
PR: PSYC 2520, 2570, 2911, and 3450 and admission to a Major in Psychology or Behavioural Neuroscience

4500 Selected Topics in Psychology I is an intensive examination of a specific topic of current interest in psychology that crosses traditional subdisciplines.
PR: two 3000-level majors courses (other than 3900) and admission to a Major in Psychology or Behavioural Neuroscience

4501 Selected Topics in Psychology II is an intensive examination of a specific topic of current interest in psychology that crosses traditional subdisciplines.
PR: two 3000-level majors courses (other than 3900) and admission to a Major in Psychology or Behavioural Neuroscience

4610 Selected Topics in Personality I
PR: the former PSYC 2620 or PSYC 3620 and admission to a Major in Psychology or Behavioural Neuroscience

4620 Selected Topics in Personality II
PR: the former PSYC 2620 or PSYC 3620 and admission to a Major in Psychology or Behavioural Neuroscience

4650 Selected Topics in Abnormal Behaviour I
PR: PSYC 3650 and admission to a Major in Psychology or Behavioural Neuroscience

4651 Selected Topics in Abnormal Behaviour II
PR: PSYC 3650, and admission to a Major in Psychology or Behavioural Neuroscience

4660 Developmental Psychopathology is a review of current theory and research related to the developmental course of maladaptive behaviours in children and adolescents. Topics will include behavioural, emotional and developmental disorders. Research concerning the role of individual, family, community and cultural factors will be discussed.
PR: PSYC 3650 and admission to a Major in Psychology or Behavioural Neuroscience

4661 Family Psychology is a study of the reciprocal relationship between family processes and abnormal behaviour. The course will focus on the role of family dynamics in the etiology of abnormal behaviour, the impact of psychological disorders on family functioning and the application of family therapy to create therapeutic change.
PR: PSYC 3650, or all of 2520, 2570, 2911 and 3640 and admission to a Major in Psychology or Behavioural Neuroscience

4662 Clinical Psychology and Theories of Psychotherapy will introduce students to the science and profession of clinical and counselling
psychology. Course content will include a review of approaches to assessment and psychotherapy and a look at some of the major research questions and findings in this area.

PR: PSYC 3650 and admission to a Major in Psychology or Behavioural Neuroscience

4670 Research Experience in Abnormal Psychology allows students to gain research experience in selected areas of clinical psychology.

PR: PSYC 2520, 2570, 2911 and 3650 and admission to a Major in Psychology or Behavioural Neuroscience

4671 Research Experience in Personality allows students to gain experience in selected areas of personality research.

PR: PSYC 2520, 2570, 2911 and 3620 and admission to a Major in Psychology or Behavioural Neuroscience

4701 Animal Behaviour II - inactive course.

4750 Selected Topics in Animal Behaviour I will examine in detail a specific topic of current interest in animal behaviour.

PR: PSYC 3750 or Biology 3750 and admission to a Major in Psychology or Behavioural Neuroscience

4751 Selected Topics in Animal Behaviour II will have the topics to be studied announced by the Department.

PR: PSYC 2520, 2570, 2911 and 3750 and admission to a Major in Psychology or Behavioural Neuroscience

4770 Research Experience in Animal Behaviour allows students to gain research experience in selected areas of animal behaviour.

PR: PSYC 2520, 2570, 2911 and 3750 and admission to a Major in Psychology or Behavioural Neuroscience

4850 Selected Topics in Behavioural Neuroscience I will have the topics to be studied announced by the Department.

PR: PSYC 2810, 3800 or 3801 and admission to a Major in Psychology or Behavioural Neuroscience

4851 Selected Topics in Behavioural Neuroscience II will have the topics to be studied announced by the Department.

PR: PSYC 2810, 3800 or 3801 and admission to a Major in Psychology or Behavioural Neuroscience

4870 Neuroscience Research allows students to gain research experience in selected areas of neuroscience.

PR: PSYC 2520, 2570, 2911, and either 3800 or 3801 and admission to a Major in Psychology or Behavioural Neuroscience

4910 Systems in Contemporary Psychology is a study of paradigms and explanations in contemporary psychology in the context of their historical antecedents.

PR: 30 credit hours in Psychology courses required in the majors program and admission to a Major in Psychology or Behavioural Neuroscience

499A and 499B Honours Dissertation is a linked course, based on an independent study of an approved problem in Psychology. The topic will be chosen in consultation with the Faculty Advisor. The first semester will normally involve directed reading in the area, and preparation of a dissertation proposal. The second semester will be devoted to conducting the study, gathering data, data analysis and preparation of a formal written report. The dissertation must be submitted for grading before the end of the tenth week of the semester in which the student is registered for 499B.

CH: 6
PR: admission to the Honours Program

8.10.3 Psychology Work Term Descriptions

The Following Work Terms are a requirement of the Psychology Co-op Program only.

199W Work Term I follows the successful completion of Semester 4. Students are expected to learn, develop and practice the high standards of behaviour and performance normally expected in the work environment. (A detailed description of each job is normally posted during the job competition.) As one component of the Work Term, the student is required to complete a work report. The work report, as a minimum requirement should:

1. analyse an issue/problem related to the student's work environment.
2. demonstrate an understanding of the structure of a professional report, and show reasonable competence in written communication and presentation skills. (Students should consult the evaluation form provided in the placement package.)

Late reports will be graded as FAL unless prior permission for a late report has been given by the co-ordinator. Students on professional development, conducted by the Division of Co-operative Education, are presented during Semester 4 to introduce and prepare the student for participation in the subsequent work terms. Topics may include among others, work term evaluation, work report writing, career planning, employment seeking skills, resume preparation, self employment, ethics and professional concepts, behavioural requirements in the work place, assertiveness in the work place and industrial safety.

299W Work Term II follows the successful completion of Semester 6. Students are expected to further develop and expand their knowledge and work-related skills and should be able to accept increased responsibility and challenge. In addition, students are expected to demonstrate an ability to deal with increasingly complex work-related concepts and problems. The work report, as a minimum requirement, should:

1. analyse an issue/problem related to the student's work environment and demonstrate an understanding of practical application of concepts relative to the student's academic background.
2. demonstrate competence in creating a professional report, and
3. show competence in written communication and presentation skills

Late reports will be graded as FAL unless prior permission for a late report has been given by the co-ordinator.

399W Work Term III follows the successful completion of Semester 7. Students should have sufficient academic grounding and work experience to contribute in a positive manner to the problem-solving and management processes needed and practiced in the work environment. Students should become better acquainted with their discipline of study, should observe and appreciate the attitudes, responsibilities, and ethics normally expected of professionals and should exercise greater independence and responsibility in their assigned work functions. The work report should reflect the growing professional development of the student and, as a minimum requirement, will:

1. demonstrate an increased ability to analyse a significant issue/problem related to the student's experience in the work environment.
2. demonstrate a high level of competence in producing a professional report, and
3. show a high level of competence in written communication and presentation skills

Late reports will be graded as FAL unless prior permission for a late report has been given by the co-ordinator.

8.11 Science

1000 Introduction to Science I is a liberal science course for Arts students, which reflects the way scientists think and work through historical, philosophical and social considerations of the environment we live in. Typical course content includes: the concepts of matter, motion and energy; the chemical basis for life and the interdependence of organisms; and the abundance and distribution of the Earth's natural resources.

UL: may not be used to fulfill any of the Science course requirements for the Honours and General Degrees in Science

1001 Introduction to Science II is continuation of Science 1000.

PR: Science 1000

UL: may not be used to fulfill any of the Science course requirements for the Honours and General Degrees in Science

1150 Introduction to Physical and Life Sciences (formerly Science 115A) is an introduction to some concepts in the Physical and Life Sciences. This course is primarily intended for the non-science major (Bachelor of Arts; Bachelor of Education (Primary/Elementary)).

CR: the former Science 115A

UL: not acceptable as a prerequisite for 2000 level courses in Physics, Chemistry, Biology, Geography or Earth Sciences

1151 Introduction to Physical and Life Sciences (formerly Science 115B) is an introduction to some concepts in the Physical and Life Sciences. This course is primarily intended for the non-science major (Bachelor of Arts; Bachelor of Education (Primary/Elementary)).

CR: the former Science 115B

UL: not acceptable as a prerequisite for 2000 level courses in Physics, Chemistry, Biology, Geography or Earth Sciences

5998 Exchange Programs in Science will be available only to students attending Memorial University of Newfoundland as part of a formal exchange agreement, memorandum of understanding, or other special arrangement. This course will normally be offered twice a year, from March to August and September to February.

CH: 3 - 15, to be determined for each offering by the Dean in consultation with the appropriate Head of Department or Co-ordinator

PR: permission of the Dean of Science

UL: may be repeated for credit once
