Red Maple

Acer rubrum
Red Maple
*Acer rubrum*

**General:** Small to medium-sized deciduous tree with grey bark, scaly on older trees.

**Leaves & Twigs:** Twigs are slender, shiny and dark red with whitish dots. Leaf buds are rounded, dark red-wine in colour. Leaves are red-tinged in spring, green in summer and bright red in fall.

**Flowers & Fruits:** Flowers appear before the leaves from dark red buds in early spring and form dense, short-stalked clusters. Male and female flowers usually grow on different branches of the same tree or on separate trees. Male flowers are yellow, while female flowers are red. Note: Only the male flowers are observed for PlantWatch.

**Habitat:** Grow in damp rocky woodlands. Most common in central and western Newfoundland and not found on the Northern Peninsula or Labrador.

**Blooming Time:** early May to early June

**How to Observe:** Tag a typical tree to observe.

**First Bloom:** When the male flowers are open in three places on the observed tree.

**Mid Bloom:** When half the male flowers are open.

**Leaf Out:** When the first leaves push out of the bud and unfold completely in three places.
