2057-30**

4. Door Colors

The **public** side of doors/frames should match the adjacent corridor doors in the building. Where a new color is needed, it should be selected from **Public area colors** above. Direction on changing colors should be directed to Facilities, Engineering and Development. Some buildings may have an established door color scheme in place (which does not match the Public area colors above), in these cases colors can be repainted to match the current scheme, however if a building wide repainting is requested, a color is to be chosen from the Public area colors above.

Non-public side of doors/frames can be chosen from Public area colors above. Any changes to public area walls, doors/frames must be approved through Facilities, Engineering and Development.

NOTE: The exception to the above paint standard are main and accent color selections for Core Science Facility, Paton College and Burton's Pond Apartments. Contact Engineering & Construction for exact colors.

CSA B651-18 - Accessible design for the built environment states: there shall be a color contrast between walls and door frames to increase visibility for persons with vision impairment.
