

**ASBESTOS AND LEAD PAINT BUILDING MATERIALS SURVEY FOR:  
BUSINESS BUILDING  
MEMORIAL UNIVERSITY OF NEWFOUNDLAND**

Prepared for:  
Memorial University of Newfoundland  
St. John's, NL

Pinchin LeBlanc Environmental Ltd  
Project No. 02-02-00900

June 19, 2013

## **EXECUTIVE SUMMARY**

Pinchin LeBlanc Environmental Limited (Pinchin) was retained by Memorial University of Newfoundland to perform asbestos and lead paint surveys in selected buildings on the Memorial University of Newfoundland's St. John's, NL campus. A total of twenty-seven (27) buildings were surveyed for asbestos containing materials (ACM) and lead based paints (LBP). This report will provide the findings for the following location;

**BUILDING DESCRIPTION:** BUSINESS BUILDING

**BUILDING ADDRESS:** MEMORIAL UNIVERSITY OF NL, ST. JOHN'S CAMPUS, NL

A summary of the findings for the Business Building (hereafter referred to as "Site Building") is provided. For specific recommendations regarding any hazardous materials listed the reader will refer to Sections 3 and 4 of this report:

1. Non-friable materials with the potential to become friable during renovation and demolition activities were identified inside the Site Building, specifically drywall joint compound.
2. Non-friable asbestos-containing building materials were identified in the Site Building, specifically vinyl floor tiles, and tar mastics.
3. No paint with lead concentrations exceeding 600mg/kg was identified in the Site Building.

*This Executive Summary is subject to the same standard limitations as contained in the report and must be read in conjunction with the entire report.*

## 1.0 INTRODUCTION

Pinchin LeBlanc Environmental Limited (Pinchin) was retained by Memorial University of Newfoundland to perform asbestos and lead paint surveys in selected buildings on the Memorial University of Newfoundland's St. John's, NL campus. A total of twenty-seven (27) buildings were surveyed for asbestos containing materials (ACM) and lead based paints (LBP). This report will provide the findings for the following location;

**BUILDING DESCRIPTION:** BUSINESS BUILDING

**BUILDING ADDRESS:** MEMORIAL UNIVERSITY OF NL, ST. JOHN'S CAMPUS, NL

The report presents a detailed investigation of condition, quantity, location, access, and type of ACM and LBP present in the building. The Overview Report, provided under separate cover, provides detailed information regarding the survey methodology, sampling procedure, evaluation criteria, suspect materials and regulatory information.

Provincial regulations and guidelines distinguish between friable<sup>1</sup> and non-friable<sup>2</sup> materials. The asbestos building materials survey performed by Pinchin included a search for both friable and common non-friable ACM.

For reporting purposes, the survey will be divided into sections. The report is presented in this manner to accommodate ease in reading and to allow access to report information for specific areas or materials within the building. The report also addresses specific systems and products likely present in the building. The sections of the report are as follows:

2.0 Survey Information

3.0 ACM Survey Findings

4.0 LBP Survey Findings

---

1 The term friable is applied to a material that can be readily reduced to dust or powder by hand or moderate pressure. Friable ACM has a much greater potential to release airborne asbestos fibres when disturbed. The most common friable ACM used in the past are sprayed or trowelled materials (for fireproofing or thermal insulation), texture plaster (decorative or acoustic), and mechanical insulations.

2 Common non-friable ACM include vinyl floor tiles, ceiling tiles, gasket materials, asbestos cement pipe or board (transite), and asbestos textiles. Although a product may be considered non-friable when new, if the product releases fine dust due to deterioration or during removal, the free dust is considered friable. For example, most lay-in or glued on acoustic ceiling tiles release significant dust during removal of large quantities of these tiles.

## 5.0 Recommendations

### 2.0 SURVEY INFORMATION

The survey was conducted on between August and September, 2012. The survey, collection of representative bulk samples, and recording of information was performed by Mr. Trent Hardy of Pinchin. All accessible areas of the building were inspected for the presence of asbestos containing materials (ACM) and lead based paints (LBP).

A total of forty-nine (49) representative bulk samples were collected for analysis for asbestos content and eleven (11) bulk samples were collected for analysis of lead content.

### 3.0 ACM SURVEY FINDINGS

The ACM found during this survey are detailed in the location & data excel document provided to the client. The excel document serves as the clients active asbestos management plan. Quantities of materials identified, locations and friable or non-friable are also present in this excel file. Laboratory certificates for asbestos samples collected are presented in Appendix I and lead samples are presented in Appendix II. Sample location drawings are provided in Appendix III. A photographic record of the samples collected during the survey of the building is presented in Appendix IV. The following is summary of the findings for this building.

#### 3.1 Sprayed or Trowelled Fireproofing and Thermal Insulation

Spray applied fireproofing was collected from room 1003 of the site building and analysis of this sample did not identify the presence of asbestos (reference Sample 02-02-900-S049).

#### 3.2 Mechanical Insulation

Tar mastic present, present on pipe elbows was sampled above the ceiling in room 1012C and contains 10% chrysotile in the sample (reference sample 02-02-900-S014). For locations and conditions of this material at the time of the building survey refer to Appendix.

One (1) sample was collected of the parging cement used on pipe elbows and fittings in the site building. Analysis of this sample did not identify the presence of asbestos (reference sample 02-02-900-S048).

#### 3.3 Acoustic Ceiling Tiles

Nine (9) samples were collected of acoustic ceiling tiles were observed in the site building. Analysis of these nine samples did not identify the presence of asbestos. A summary of the acoustic ceiling tiles samples collected is observed as follows:

- The 2"x2" acoustic ceiling tile distinguished with a pinhole and fleck pattern located in room 1009 (reference sample 02-02-900-S013);
- The 2"x4" acoustic ceiling tile distinguished with a pinhole and small fissure pattern located in room 1015J (reference sample 02-02-900-S019);
- The 2"x4" acoustic ceiling tile distinguished with a pinhole and fleck pattern located in room 1005 (reference sample 02-02-900-S005);
- The 2"x4" acoustic ceiling tile distinguished with a pinhole fleck pattern located in room 2030 (reference sample 02-02-900-S025);
- The 2"x4" acoustic ceiling tile distinguished with a longitudinal fissure and pinhole pattern located in room 1006 (reference sample 02-02-900-S006);
- The 2"x4" acoustic ceiling tile distinguished with a pinhole and fleck pattern located in room 1005 (reference sample 02-02-900-S004);
- The 2"x2" acoustic ceiling tile distinguished with a solid wave pattern located in room 3007 (reference sample 02-02-900-S046); and
- The 2"x2" acoustic ceiling tile distinguished with a pinhole & small fissure pattern located in room 3C01 (reference sample 02-02-900-S028).

### **3.4 Drywall, Plaster, and Texture Finishes**

Drywall was used as a wall and ceiling finish throughout the building. Until the early to mid-1980s, drywall joint compound may have contained chrysotile asbestos. Drywall joint compound is considered a non-friable material. Most buildings of this type undergo constant renovation, including the removal and replacement of drywall partitions. Therefore extensive sampling of drywall compound is necessary to come to a reasonable conclusion regarding the extent of asbestos. Furthermore, any attempt to distinguish and delineate all asbestos-containing drywall compounds from new non-asbestos drywall compound is often unachievable. Therefore, drywall joint compound was sampled at walls, which were believed to be original to try to define the presence of asbestos content in the original drywall compound.

Sixteen (16) samples, in total, of drywall joint compound were collected in the site building. Results from three (3) of the sixteen (16) samples collected were analyzed to contain 3% chrysotile asbestos (reference samples 02-02-900-S015, 02-02-900-S016 and 02-02-900-S018).

### 3.5 Vinyl Flooring Materials

#### 3.5.1 Vinyl Floor Tiles

Fourteen (14) types of vinyl floor tiles were observed in the site building. One (1) of the fourteen (14) samples collected was analyzed to contain asbestos. A list of the visually different vinyl floor tiles is summarized in both tables provided below:

##### 3.5.1.1 Asbestos Containing Vinyl Floor Tiles

Asbestos Containing Vinyl Floor Tiles Business Building			
Sample Number	Description	Location	Asbestos (%)
02-02-900-S020	12"x 12" VFT white with thick brown streaks	Room 2014	3% chrysotile
For locations and conditions of this material at the time of the building survey refer to location & data excel document.			

##### 3.5.1.2 Non-Asbestos Containing Vinyl Floor Tiles

Non-Asbestos Containing Vinyl Floor Tiles Business Building		
Sample Number	Description	Location
02-02-900-S009	12"x 12" blue with dark blue and white flecks	1007A
02-02-900-S007	12"x 12" light blue with blue and white flecks	1007A
02-02-900-S047	12"x 12" light brown with brown & white flecks	1013
02-02-900-S039	12"x 12" light brown with brown flecks	3026
02-02-900-S008	12"x 12" light grey with grey and white flecks	1007A
02-02-900-S022	12"x 12" pink	2027A/2027G
02-02-900-S001	12"x 12" white	1001
02-02-900-S038	12"x 12" white with abundant grey flecks	3026A

<b>Non-Asbestos Containing Vinyl Floor Tiles Business Building</b>		
<b>Sample Number</b>	<b>Description</b>	<b>Location</b>
02-02-900-S043	12"x 12" white with black streaks	3014
02-02-900-S041	12"x 12" white with brown flecks	3019
02-02-900-S040	12"x 12" white with brown streaks	3025
02-02-900-S026	12"x 12" white with brown streaks	2029 - 2030
02-02-900-S035	12"x 12" yellow	Cloakroom
02-02-900-S009	12"x 12" blue with dark blue and white flecks	1007A
02-02-900-S007	12"x 12" light blue with blue and white flecks	1007A
02-02-900-S047	12"x 12" light brown with brown & white flecks	1013
For locations and conditions of this material at the time of the building survey refer to location & data excel document.		

### **3.5.2 Vinyl Sheet Flooring**

Four (4) types of vinyl floor sheet flooring were observed in the site building. None of the samples analyzed identified the presence of asbestos. A list of the visually different vinyl floor covering is provided below:

<b>Non-Asbestos Containing Vinyl sheet Flooring Business Building</b>		
<b>Sample Number</b>	<b>Description</b>	<b>Location</b>
02-02-900-S036	Blue with white mottling	4033A
02-02-900-S002	grey with large white & black streaks	1005
02-02-900-S017	light grey speckled pattern	1015C
02-02-900-S010	light grey with white & dark grey streaks	1009
For locations and conditions of this material at the time of the building survey refer to location & data excel document.		

### **3.6 Asbestos Cement Products**

No asbestos cement products were observed in the Site Building

### **3.7 Vermiculite Insulation**

No vermiculite containing products were observed. Visual observations were made above the ceiling and through any hatches.

### **3.8 Other Asbestos Containing Building Materials**

One (1) sample was collected from room 4021 of tar mastics on the sinks (gold colour). Analysis of this sample indicates the presence of 5% chrysotile asbestos (reference sample 02-02-900-S032). For locations and conditions of this material at the time of the building survey refer to location & data excel document (Location and Data Report).

One (1) sample was collected from room 2029 of tar mastic on ducts. Analysis of this sample did not identify the presence of asbestos (reference sample 02-02-900-S024).

One (1) sample was collected from the exterior window caulking. Analysis of this sample did not identify the presence of asbestos (reference sample 02-02-900-S012).

## **4.0 LBP SURVEY FINDINGS**

Analytical results indicate that none of the samples collected of painted surfaces would be considered a risk to worker exposure during construction or renovation activities (with lead concentrations exceeding 0.06%).

## **5.0 RECOMMENDATIONS**

Asbestos containing materials have been identified in the Site Building. Listed below are a series of general recommendations for the Site Building. Recommendations provided in the Overview Report may also be reviewed and applied to this building.

### Potentially Friable Materials

Non-friable materials with the potential to become friable during renovation and demolition activities were identified inside the Site Building, specifically drywall joint compound.

1. Under the NL guidance documents for moderate and low risk asbestos abatement procedures, quantities of these materials within an enclosure exceeding 100 ft<sup>2</sup> should be removed using Type III (high risk) asbestos abatement procedures. Quantities less than 100 ft<sup>2</sup> but exceeding 10ft<sup>2</sup> should be removed using Type II (moderate risk) asbestos

abatement procedures, while quantities less than 10 ft<sup>2</sup> should be removed using Type I (low risk) asbestos abatement procedures.

#### Non-Friable Materials

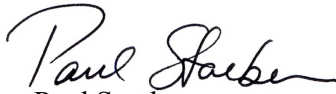

Non-friable asbestos containing materials identified inside the Site Building include: tar mastics, and vinyl floor products.

1. Type I (low risk) asbestos abatement procedures should be carried out for the scheduled disturbance of any non-friable materials provided the materials can be removed intact, and without the use of powered hand tools.
2. Should the use of powered hand tools or excessive breakage of the materials become necessary, Type II (moderate risk) asbestos abatement procedures should be adopted.

Should there be any questions pertaining to the contents of this report, please do not hesitate to contact the undersigned at our office.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency
