

**ASBESTOS AND LEAD PAINT BUILDING MATERIALS SURVEY FOR:  
EDUCATION BUILDING  
MEMORIAL UNIVERSITY OF NEWFOUNDLAND**

Prepared for:  
Memorial University of Newfoundland  
St. John's, NL

Pinchin LeBlanc Environmental Ltd  
Project No. 02-02-00900

June 19, 2013

## **EXECUTIVE SUMMARY**

Pinchin LeBlanc Environmental Limited (Pinchin) was retained by Memorial University of Newfoundland to perform asbestos and lead paint surveys in selected buildings on the Memorial University of Newfoundland's St. John's, NL campus. A total of twenty-seven (27) buildings were surveyed for asbestos containing materials (ACM) and lead based paints (LBP). This report will provide the findings for the following location;

**BUILDING DESCRIPTION:** EDUCATION BUILDING

**BUILDING ADDRESS:** MEMORIAL UNIVERSITY OF NL, ST. JOHN'S CAMPUS, NL

A summary of the findings for the Education Building (hereafter referred to as "Site Building") is provided. For specific recommendations regarding any hazardous materials listed the reader will refer to Sections 3 and 4 of this report:

1. Friable asbestos containing building materials were identified in the Site Building, specifically parging cement, spray fire proofing and ceiling stucco;
2. Non-friable materials with the potential to become friable during renovation and demolition activities were identified inside the Site Building, specifically drywall joint compound, and plaster.
3. Non-friable asbestos-containing building materials were identified in the Site Building, specifically vinyl floor tiles, vinyl sheet flooring, paper jacketing, transite, and ductwork sealant.
4. Paints containing greater than 600 mg/kg of lead were identified in the Site Building, specifically the dark red paint as observed in ED1008, the green paint as observed in ED4037B and the brown/purple paint in ED5010.

*This Executive Summary is subject to the same standard limitations as contained in the report and must be read in conjunction with the entire report.*

APPENDIX IV          SAMPLE PHOTO LOG

## **1.0 INTRODUCTION**

Pinchin LeBlanc Environmental Limited (Pinchin) was retained by Memorial University of Newfoundland to perform asbestos and lead paint surveys in selected buildings on the Memorial University of Newfoundland's St. John's, NL campus. A total of twenty-seven (27) buildings were surveyed for asbestos containing materials (ACM) and lead based paints (LBP). This report will provide the findings for the following location;

**BUILDING DESCRIPTION:** EDUCATION BUILDING

**BUILDING ADDRESS:** MEMORIAL UNIVERSITY OF NL, ST. JOHN'S CAMPUS, NL

The report presents a detailed investigation of condition, quantity, location, access, and type of ACM and LBP present in the building. The Overview Report, provided under separate cover, provides detailed information regarding the survey methodology, sampling procedure, evaluation criteria, suspect materials and regulatory information.

Provincial regulations and guidelines distinguish between friable<sup>1</sup> and non-friable<sup>2</sup> materials. The asbestos building materials survey performed by Pinchin included a search for both friable and common non-friable ACM.

For reporting purposes, the survey will be divided into sections. The report is presented in this manner to accommodate ease in reading and to allow access to report information for specific areas or materials within the building. The report also addresses specific systems and products likely present in the building. The sections of the report are as follows:

- 2.0 Survey Information
- 3.0 ACM Survey Findings
- 4.0 LBP Survey Findings
- 5.0 Recommendations

---

<sup>1</sup> The term friable is applied to a material that can be readily reduced to dust or powder by hand or moderate pressure. Friable ACM has a much greater potential to release airborne asbestos fibres when disturbed. The most common friable ACM used in the past are sprayed or trowelled materials (for fireproofing or thermal insulation), texture plaster (decorative or acoustic), and mechanical insulations.

<sup>2</sup> Common non-friable ACM include vinyl floor tiles, ceiling tiles, gasket materials, asbestos cement pipe or board (transite), and asbestos textiles. Although a product may be considered non-friable when new, if the product releases fine dust due to deterioration or during removal, the free dust is considered friable. For example, most lay-in or glued on acoustic ceiling tiles release significant dust during removal of large quantities of these tiles..

## **2.0 SURVEY INFORMATION**

The survey was conducted between July 19<sup>th</sup> and 27<sup>th</sup>, 2012. The survey, collection of representative bulk samples, and recording of information was performed by Mr. Curtis Snelgrove, Mr. Trent Hardy, and Mr. Philip Lowery of Pinchin. All accessible areas of the building were inspected for the presence of asbestos containing materials (ACM) and lead based paints (LBP).

A total of ninety (90) representative bulk samples were collected for analysis for asbestos content and twenty-one (21) bulk samples were collected for analysis of lead content.

## **3.0 ACM SURVEY FINDINGS**

The ACM found during this survey are detailed in the location & data excel document provided to the client. The excel document serves as the clients active asbestos management plan. Quantities of materials identified, locations and friable or non-friable are also present in this excel file. Laboratory certificates for asbestos samples collected are presented in Appendix I and lead samples are presented in Appendix II. Sample location drawings are provided in Appendix III. A photographic record of the samples collected during the survey of the building is presented in Appendix IV. The following is summary of the findings for this building.

### **3.1 Sprayed or Trowelled Fireproofing and Thermal Insulation**

Spray fireproofing present above ceiling in limited areas of the building was sampled and contains 80% amosite asbestos (reference sample 02-02-900-S1). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

### **3.2 Mechanical Insulation**

Insulating cement, also referred to as “parging cement”, present on pipe elbows for and fittings was sampled in the site building. Results from two (2) of the five (5) samples contain 25% chrysotile asbestos (reference sample 02-02-900-S075 and 02-02-900-S076). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

One (1) sample of the tar mastic used on pipe elbows was collected from ED 4014/4013. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S066).

Two (2) samples of the tar paper used on fibreglass insulation were collected from ED 3000E and ED3003. Analysis of the samples did not identify the presence of asbestos (reference samples 02-02-900-S037 and 02-02-900-S053).

One (1) sample of the paper jacketing used on pipe straight run was collected from ED 1020A. Analysis of the samples identified the presence of 20% chrysotile asbestos (reference sample 02-02-900-S085).

### **3.3 Acoustic Ceiling Tiles**

Nine (9) were collected of acoustic ceiling tiles were observed in the site building. Analysis of the samples did not identify the presence of asbestos. A summary of the acoustic ceiling tiles samples collected is observed as follows:

- The 2"x2" acoustic ceiling tile distinguished with a pinhole pattern located in Room ED2011 (reference sample 02-02-900-S003).
- The 2"x2" acoustic ceiling tile distinguished with pinhole fleck located in room ED 2007 (reference sample A02-02-900-S005)
- The 2"x2" acoustic ceiling tile distinguished with a pinhole fissure pattern in location # 010 - Copy Room (reference sample 02-02-900-S007).
- The 2"x4" acoustic ceiling tile distinguished with a pinhole pattern located in ED 2030 B (reference sample 02-02-900-S016).
- The 2"x2" acoustic ceiling tile distinguished with a pinhole pattern located in ED 1008 (reference sample 02-02-900-S021).
- The 2"x2" acoustic ceiling tile distinguished with a block pattern located in ED 3011 (reference sample 02-02-900-S051).
- The 2"x2" acoustic ceiling tile distinguished with a pinhole and fleck pattern located in ED 4036 (reference sample 02-02-900-S057).
- The 2"x4" acoustic ceiling tile distinguished with a pinhole and fleck pattern located in ED 4C03 (reference sample 02-02-900-S061).
- The 2"x2" acoustic ceiling tile distinguished with a checkered pattern located in ED 3C01 (reference sample 02-02-900-S045).

### **3.4 Drywall, Plaster, and Texture Finishes**

Drywall was used as a wall and ceiling finish throughout the building. Until the early to mid-1980s, drywall joint compound may have contained chrysotile asbestos. Drywall joint compound is considered a non-friable material. Most buildings of this type undergo constant renovation,

including the removal and replacement of drywall partitions. Therefore extensive sampling of drywall compound is necessary to come to a reasonable conclusion regarding the extent of asbestos. Furthermore, any attempt to distinguish and delineate all asbestos-containing drywall compounds from new non-asbestos drywall compound is often unachievable. Therefore, drywall joint compound was sampled at walls, which were believed to be original to try to define the presence of asbestos content in the original drywall compound.

Eighteen (18) samples, in total, of drywall joint compound were collected in the site building. Results of two (2) samples collected were determined to contain 3% chrysotile asbestos (reference samples, 02-02-900-S034, and 02-02-900-S039).

Plaster was used as a wall and ceiling finish in various locations in the Site Building. Until the early to mid-1980s, plaster may have contained chrysotile asbestos. Plaster is considered a potentially friable material. Most buildings of this type undergo constant renovation, including the removal and replacement of plaster. Moreover, the addition of asbestos to plaster compound was done at the site by the individual plasterer on an as needs basis. Therefore extensive sampling of plaster is necessary to come to a reasonable conclusion regarding the extent of asbestos. Furthermore, any attempt to distinguish and delineate all asbestos-containing plaster from new non-asbestos plaster is often unachievable. Therefore, plaster was sampled at walls which were believed to be original to try to define the presence of asbestos content in the original plaster.

Eleven (11) samples of plaster were collected throughout the site building. Results from one (1) of the eleven (11) samples collected contain 4% Chrysotile asbestos (reference sample 02-02-900-S074). For locations and conditions of this material at the time of the building survey refer to location & data excel document. Due to the inconsistency, all plaster is to be managed as asbestos containing.

Friable textured ceiling stucco was also sampled on the ceilings from the lobby on the 2<sup>nd</sup> floor and room ED3034B. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S001 and 02-02-900-S042).

Friable textured ceiling stucco was also sampled on the ceilings from room 2C02A. Analysis of the sample identified the presence of 5% chrysotile asbestos (reference sample 02-02-900-S089).

### **3.5 Vinyl Flooring Materials**

#### **3.5.1 Vinyl Floor Tiles**

Five (5) types of vinyl floor tiles were observed in the site building. Results from one (1) of the five (5) samples collected were determined to contain asbestos. A list of the five (5) visually different vinyl floor tiles is provided below:

### *3.5.1.1 Asbestos Containing Vinyl Floor Tiles*

One (1) sample of the 1"x1" vinyl floor tile identified with a grey with dark specks was collected from ED 1002 and contains 5% chrysotile asbestos (reference sample 02-02-900-S022). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

### *3.5.1.2 Non-Asbestos Containing Vinyl Floor Tiles*

- One (1) sample of the 1"x1" vinyl floor tile identified with a grey with black speck was collected from ED 1014. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S019).
- One (1) sample of the 1"x1" vinyl floor tile identified with a light grey with brown fleck was collected from ED 3010. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S052).
- One (1) sample of the 1"x1" vinyl floor tile identified with a grey with light specks was collected from ED 1032. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S024).
- One (1) sample of the 1"x1" vinyl floor tile identified with a brown colour was collected from ED 1039. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S025).

### **3.5.2 Vinyl Sheet Flooring**

Twenty-six (26) types of vinyl sheet flooring were observed in the site building. Results from ten (10) of the twenty-six (26) samples collected contain asbestos. A summary of the visually different asbestos and non-asbestos containing vinyl sheet flooring is provided in the tables below:

### 3.5.2.1 Asbestos Containing Vinyl Sheet Flooring

Asbestos Containing Vinyl Sheet Flooring			
Education Building			
Sample Number	Location	Description	Asbestos (%)
02-02-900-S017	ED 1021	Grey	15%
02-02-900-S018	ED 1019	Light Brown	15%
02-02-900-S023	ED 1034	Green	15%
02-02-900-S032	ED 3057	Beige with Grey Speck	15%
02-02-900-S033	ED 3064	Green	10%
02-02-900-S082	ED 1014B	Green	15%
02-02-900-S041	ED 3039	Brown Speck	15%
02-02-900-S062	ED 4004	light tan with brown fleck	15%
02-02-900-S063	ED 4006	Green with Brown Flecks	15%
02-02-900-S068	ED 5002	Marble Stone Pattern	15%
For locations and conditions of these materials at the time of the building survey refer to location & data excel document.			

### 3.5.2.2 Non-Asbestos Containing Vinyl Sheet Flooring

Non-Asbestos Containing Vinyl Sheet Flooring		
Education Building		
Sample Number	Location	Description
02-02-900-S009	ED 2018 B	blue
02-02-900-S011	ED 2018 A	beige

<b>Non-Asbestos Containing Vinyl Sheet Flooring</b>		
<b>Education Building</b>		
02-02-900-S030	ED 1053	blue
02-02-900-S031	ED 3061	brown
02-02-900-S041	ED 3039	brown speck
02-02-900-S046	ED 3030	green with white wave pattern
02-02-900-S048	ED 3019	grey & black fleck
02-02-900-S049	ED 3011	light grey with grey & white fleck
02-02-900-S058	ED 4036A	tan with white wave pattern
02-02-900-S060	ED 4049	green with white wave pattern
02-02-900-S068	ED 5002	marble stone pattern
02-02-900-S069	ED 5006	aqua with white streak
02-02-900-S070	ED 5009C	purple wave pattern
02-02-900-S071	ED 5008	pink with red streak
02-02-900-S065	ED 4008	brown with stone pattern
For additional locations of these materials at the time of the building survey refer to location & data excel document.		

### 3.6 Asbestos Cement Products

One (1) sample of transite sheeting was collected from room ED 1011 and it contains 25% chrysotile asbestos (reference sample 02-02-900-S077). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

### 3.7 Vermiculite Insulation

No vermiculite containing products were observed. Visual observations were made above the ceiling and through any hatches.

### **3.8 Other Asbestos Containing Building Materials**

One (1) sample of duct sealant was collected from room ED 2003. Analysis of this sample determined it to contain 4% chrysotile asbestos (reference sample 02-02-900-S013). As sampling of each section of duct in the site building would be impractical, it is recommended that all duct sealant visually similar to the one located in the above noted room be managed as asbestos containing.

One (1) sample of tar on seams of exterior wall insulation was collected from room ED3000H. Analysis of this sample determined 10% chrysotile asbestos (reference sample 02-02-900-S038). As sampling of section of wall in the site building would be impractical, it is recommended that all tar mastic visually similar to the one located in the above noted room be managed as asbestos containing.

One (1) sample of the peg board was collected from room ED1039. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S026).

One (1) sample of gasket material was collected from room ED1009. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S027).

One (1) sample of window caulking was collected from the exterior of the building. Analysis of the samples did not identify the presence of asbestos (reference sample 02-02-900-S078).

### **4.0 LBP SURVEY FINDINGS**

Analytical results indicate that three (3) of the samples collected of painted surfaces would be considered a risk to worker exposure during construction or renovation activities (with lead concentrations exceeding 0.06%). The dark red paint as observed in ED1008 (reference sample 02-02-900-L008) contains 0.08%, the green paint as observed in ED4037B (reference sample 02-02-900-L018) contains 0.068% and the brown/purple paint in ED5010 (reference sample 02-02-900-L019) contains 0.12% and the same paint colours located elsewhere, should be managed as lead-containing.

Results indicate that were detected, all other paint samples containing less than 0.06% lead.

All paints observed inside the Site Building were observed in GOOD condition.

### **5.0 RECOMMENDATIONS**

Asbestos containing materials have been identified in the Site Building. Listed below are a series of general recommendations for the Site Building. Recommendations provided in the Overview Report may also be reviewed and applied to this building.

### Friable ACMs

Friable asbestos containing materials identified inside the Site Building include: spray fireproofing, parging cement, and ceiling stucco.

1. Type III (high risk) asbestos abatement procedures should be carried out for the scheduled removal of greater than 1 ft<sup>2</sup> of friable asbestos containing materials. Alternatively, Type II (moderate risk) glove bag abatement procedures may be applied where practical;
2. Type II (moderate risk) asbestos abatement procedures should be carried out for the scheduled repair or enclosure of friable ACMs or for the removal of less than 1 ft<sup>2</sup> of material;

### Potentially Friable Materials

Non-friable materials with the potential to become friable during renovation and demolition activities were identified inside the Site Building, specifically drywall joint compound and plaster.

1. Under the NL guidance documents for moderate and low risk asbestos abatement procedures, quantities of plaster within an enclosure exceeding 100 ft<sup>2</sup> should be removed using Type III (high risk) asbestos abatement procedures. Quantities less than 100 ft<sup>2</sup> but exceeding 10 ft<sup>2</sup> should be removed using Type II (moderate risk) asbestos abatement procedures, while quantities less than 10 ft<sup>2</sup> should be removed using Type I (low risk) asbestos abatement procedures.

### Non-Friable Materials

Non-friable asbestos containing materials identified inside the Site Building include: vinyl floor tiles, and window caulking.

1. Type I (low risk) asbestos abatement procedures should be carried out for the scheduled disturbance of any non-friable materials provided the materials can be removed intact, and without the use of powered hand tools.
2. Should the use of powered hand tools or excessive breakage of the materials become necessary, Type II (moderate risk) asbestos abatement procedures should be adopted.

### Lead Based Paints

Do not grind, sand, torch or cut lead materials without using proper procedures, as material poses a health hazard if disturbed by these methods.

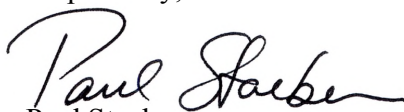

Any painted surfaces visually matching the identified paint colors should be managed as lead containing and necessary precautions (i.e.: worker protection) should be employed prior to the disturbance to these materials.

Should there be any questions pertaining to the contents of this report, please do not hesitate to contact the undersigned at our office.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Estimated MDL is 0.1%.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Estimated MDL is 0.1%.

1212921PLM_63	unable to separate mastic				Dissolved

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Estimated MDL is 0.1%.
