

**ASBESTOS AND LEAD PAINT BUILDING MATERIALS SURVEY FOR:  
PHYSICAL EDUCATION BUILDING  
MEMORIAL UNIVERSITY OF NEWFOUNDLAND**

Prepared for:  
Memorial University of Newfoundland  
St. John's, NL

Pinchin LeBlanc Environmental Ltd  
Project No. 02-02-00900

June 19, 2013

## **EXECUTIVE SUMMARY**

Pinchin LeBlanc Environmental Ltd. (Pinchin) was retained by Memorial University of Newfoundland to perform asbestos and lead paint surveys in selected buildings on the Memorial University of Newfoundland's St. John's, NL campus. A total of twenty-seven (27) buildings were surveyed for asbestos containing materials (ACM) and lead based paints (LBP). This report will provide the findings for the following location:

**BUILDING DESCRIPTION:** PHYSICAL EDUCATION BUILDING

**BUILDING ADDRESS:** MEMORIAL UNIVERSITY OF NL, ST. JOHN'S CAMPUS, NL

A summary of the findings for the Physical Education building (hereafter referred to as "Site Building") provided. For specific recommendations regarding any hazardous materials listed the reader will refer to Sections 3 and 4 of this report:

1. Friable asbestos containing building materials were identified in the Site Building, specifically paring cement, tank insulation and ceiling stucco.
2. Non-friable materials with the potential to become friable during renovation and demolition activities were identified inside the Site Building, specifically plaster.
3. Non-friable asbestos-containing building materials were identified in the Site Building, specifically vinyl floor tiles.
4. Paints containing greater than 600 mg/kg of lead were identified in the Site Building, specifically the green paint as observed on a door in room PE 4001, the brown paint as observed in room 3012, the green paint as observed in room 2006 and the black paint as observed on the exterior.

*This Executive Summary is subject to the same standard limitations as contained in the report and must be read in conjunction with the entire report.*

## 1.0 INTRODUCTION

Pinchin LeBlanc Environmental Ltd. (Pinchin) was retained by Memorial University of Newfoundland to perform asbestos and lead paint surveys in selected buildings on the Memorial University of Newfoundland's St. John's, NL campus. A total of twenty-seven (27) buildings were surveyed for asbestos containing materials (ACM) and lead based paints (LBP). This report will provide the findings for the following location:

**BUILDING DESCRIPTION:** PHYSICAL EDUCATION BUILDING

**BUILDING ADDRESS:** MEMORIAL UNIVERSITY OF NL, ST. JOHN'S CAMPUS, NL

The report presents a detailed investigation of condition, quantity, location, access, and type of ACM and LBP present in the building. The Overview Report, provided under separate cover, provides detailed information regarding the survey methodology, sampling procedure, evaluation criteria, suspect materials and regulatory information.

Provincial regulations and guidelines distinguish between friable<sup>1</sup> and non-friable<sup>2</sup> materials. The asbestos building materials survey performed by Pinchin included a search for both friable and common non-friable ACM.

For reporting purposes, the survey will be divided into sections. The report is presented in this manner to accommodate ease in reading and to allow access to report information for specific areas or materials within the building. The report also addresses specific systems and products likely present in the building. The sections of the report are as follows:

- 2.0 Survey Information
- 3.0 ACM Survey Findings
- 4.0 LBP Survey Findings
- 5.0 Recommendations

---

<sup>1</sup> The term friable is applied to a material that can be readily reduced to dust or powder by hand or moderate pressure. Friable ACM has a much greater potential to release airborne asbestos fibres when disturbed. The most common friable ACM used in the past are sprayed or trowelled materials (for fireproofing or thermal insulation), texture plaster (decorative or acoustic), and mechanical insulations.

<sup>2</sup> Common non-friable ACM include vinyl floor tiles, ceiling tiles, gasket materials, asbestos cement pipe or board (transite), and asbestos textiles. Although a product may be considered non-friable when new, if the product releases fine dust due to deterioration or during removal, the free dust is considered friable. For example, most lay-in or glued on acoustic ceiling tiles release significant dust during removal of large quantities of these tiles.

## **2.0 SURVEY INFORMATION**

The survey was conducted on August 23<sup>th</sup> and 28<sup>th</sup>-30<sup>th</sup>, and November 2<sup>nd</sup>, 2012. The survey, collection of representative bulk samples, and recording of information was performed by Mr. Trent Hardy and Mr. Curtis Snelgrove of Pinchin. All accessible areas of the building were inspected for the presence of asbestos containing materials (ACM) and lead based paints (LBP).

A total of forty-four (44) representative bulk samples were collected for analysis for asbestos content. Multiple phases within various samples were analyzed independently, as a result, a total of fifty-nine (59) analyses were performed.

A total of fifteen (15) bulk samples were collected for analysis of lead content.

## **3.0 ACM SURVEY FINDINGS**

The ACM found during this survey are detailed in the location & data excel document provided to the client. The excel document serves as the clients active asbestos management plan. Quantities of materials identified, locations and friable or non-friable are also present in this excel file. Laboratory certificates for asbestos samples collected are presented in Appendix I and lead samples are presented in Appendix II. Sample location drawings are provided in Appendix III. A photographic record of the samples collected during the survey of the building is presented in Appendix IV. The following is summary of the findings for this.

### **3.1 Sprayed or Trowelled Fireproofing and Thermal Insulation**

Two (2) samples were collected of sprayed and fibrous fireproofing from Rooms PE-2007A and PE-2006. Analysis of the samples did not identify the presence of asbestos (reference samples 02-02-900-S026 and 02-02-900-S028).

### **3.2 Mechanical Insulation**

Insulating cement, also referred to as “parging cement”, present on pipe elbows and fittings was sampled in the site building and contains 30% chrysotile asbestos (reference sample 02-02-900-S004). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

Tank insulation was collected from the boiler room (Room PE-1005) and contains 30% chrysotile asbestos (reference sample 02-02-900-S045). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

Tar paper used on insulation was collected in the site building. Analysis of the samples did not identify the presence of asbestos (reference samples 02-02-900-S019 and 02-02-900-S020).

### **3.3 Acoustic Ceiling Tiles**

Four (4) samples were collected of acoustic ceiling tiles observed in the site building. A description of the ceiling tiles sample is summarized below:

- The 2"x2" acoustic ceiling tile distinguished with a mottled pattern was collected from Room PE-4001 (reference sample 02-02-900-S007). Analysis of the sample did not identify the presence of asbestos.
- The 2"x4" acoustic ceiling tile distinguished with a pinhole and fleck pattern was collected from Room PE-1017 (reference sample 02-02-900-S018). Analysis of the sample did not identify the presence of asbestos.
- The 2"x4" acoustic ceiling tile distinguished with a pinhole and small fleck pattern was collected from Room PE-2006 (reference sample 02-02-900-S027). Analysis of the sample did not identify the presence of asbestos.
- The 2"x2" acoustic ceiling tile distinguished with a pinhole and small fleck pattern was collected from Room PE-2022 (reference sample 02-02-900-S032). Analysis of the samples did not identify the presence of asbestos.

### **3.4 Drywall, Plaster, and Texture Finishes**

Drywall was used as a wall and ceiling finish throughout the building. Until the early to mid-1980s, drywall joint compound may have contained chrysotile asbestos. Drywall joint compound is considered a non-friable material. Most buildings of this type undergo constant renovation, including the removal and replacement of drywall partitions. Therefore extensive sampling of drywall compound is necessary to come to a reasonable conclusion regarding the extent of asbestos. Furthermore, any attempt to distinguish and delineate all asbestos-containing drywall compounds from new non-asbestos drywall compound is often unachievable. Therefore, drywall joint compound was sampled at walls, which were believed to be original to try to define the presence of asbestos content in the original drywall compound.

Seven (7) samples of drywall joint compound were collected in the site building. Analysis of these samples did not identify the presence of asbestos.

Plaster was used as a wall and ceiling finish in various locations in the Site Building. Until the early to mid-1980s, plaster may have contained chrysotile asbestos. Plaster is considered a potentially friable material. Most buildings of this type undergo constant renovation, including the removal and replacement of plaster. Moreover, the addition of asbestos to plaster compound was done at the site by the individual plasterer on an as needs basis. Therefore extensive sampling of

plaster is necessary to come to a reasonable conclusion regarding the extent of asbestos. Furthermore, any attempt to distinguish and delineate all asbestos-containing plaster from new non-asbestos plaster is often unachievable. Therefore, plaster was sampled at walls which were believed to be original to try to define the presence of asbestos content in the original plaster.

Eight (8) samples of plaster were collected throughout the site building. Multiple phases within each sample are analyzed independently, as a result, a total of fifteen (15) analyses were performed. Results from three (3) of the fifteen (15) phases analyzed identified the presence of 1% chrysotile asbestos (reference samples 02-02-900-S010-B, 02-02-900-S021-B and 02-02-900-S023-B). For locations and conditions of this material at the time of the building survey refer to location & data excel document. Due to the inconsistency, all plaster is to be managed as asbestos containing.

One (1) sample of wall plaster debris was collected from Room PE-3013. Analysis of the sample did not identify the presence of asbestos (reference sample 02-02-900-S035).

Five (5) samples of friable textured ceiling stucco were collected from Rooms PE-2015, PE-2024, PE-2C01, Room PE-3002A and PE-2C06. Results from three (3) of the five (5) samples analyzed identified the presence of 5% chrysotile asbestos (reference samples 02-02-900-S022, 02-02-900-S031 and 02-02-900-S042). For locations and conditions of this material at the time of the building survey refer to location & data excel document.

### **3.5 Vinyl Flooring Materials**

#### **3.5.1 Vinyl Floor Tiles**

Five (5) types of vinyl floor tiles were observed in the site building. Results from four (4) of the nine (9) phases analyzed were determined to contain asbestos. A list of the five (5) visually different vinyl floor tiles is provided below:

##### *3.5.1.1 Asbestos Containing Vinyl Floor Tiles*

- One (1) sample of the 9"x9" vinyl floor tile identified as brown with white streaks was collected from Room PE-2002 and contains 5% chrysotile asbestos. The tar mastic adhesive associated with this sample contains 8% chrysotile asbestos (reference sample 02-02-900-S029). For locations and conditions of this material at the time of the building survey refer to location & data excel document.
- One (1) sample of the 12"x12" vinyl floor tile identified as brown with thick brown and white streaks was collected from Room PE-3013 and contains 3% chrysotile asbestos (reference sample 02-02-900-S034). Analysis of the sample did not identify the presence

of asbestos in the mastic. For locations and conditions of this material at the time of the building survey refer to location & data excel document.

- One (1) sample of the 12"x12" vinyl floor tile identified as brown with thick brown and white streaks was collected from Room PE-3002A and 3C02A and contains 5% chrysotile asbestos (reference sample 02-02-900-S014).

#### *3.5.1.2 Non-Asbestos Containing Vinyl Floor Tiles*

- One (1) sample of the 12"x12" vinyl floor tile identified as very light grey with short brown streaks was collected from the first floor hallway (Room PE-IC02). Analysis of the sample did not identify the presence of asbestos (reference samples 02-02-900-S001).
- One (1) sample of the 12"x12" vinyl floor tile identified as white with black streaks was collected from the first floor hallway (Room PE-IC02). Analysis of the sample did not identify the presence of asbestos (reference samples 02-02-900-S002-A and 02-02-0900-S002-B).

#### **3.5.2 Vinyl Sheet Flooring**

Eight (8) types of vinyl sheet flooring were observed in the site building. Analysis of the samples did not identify the presence of asbestos. A summary of the visually different non-asbestos containing vinyl sheet flooring is provided in the table below:

##### *3.5.2.1 Non-Asbestos Containing Vinyl Sheet Flooring*

<b>Non-Asbestos Containing Vinyl Sheet Flooring Physical Education Building</b>		
<b>Sample Number</b>	<b>Location</b>	<b>Description</b>
02-02-900-S013	Room PE-2009	Brown with Green and Pink Mottles
02-02-900-S016	Room PE-1017	Brown Stone Pattern
02-02-900-S025	Room PE-2007B	Light Brown
02-02-900-S033	Room PE-2020B	Brown with Light Grey Mottles
02-02-900-S036	Room PE-2003B	Green
02-02-900-S037	Room PE-1008	Pink Speckled Pattern

<b>Non-Asbestos Containing Vinyl Sheet Flooring Physical Education Building</b>		
<b>Sample Number</b>	<b>Location</b>	<b>Description</b>
02-02-900-S038-A 02-02-900-S038-B	Room PE-1020	Green Speckled Pattern (vinyl and mastic)
02-02-900-S039-A 02-02-900-S039-B	Room PE-2014- 2014A	Green and White Speckled Pattern (vinyl and mastic)
For locations and conditions of this material at the time of the building survey refer to location & data excel document.		

### **3.6 Asbestos Cement Products**

One (1) sample cement board was collected from room PE-0C01 and analysis did not identify the presence of asbestos (reference sample 02-02-900-S044).

Asbestos cement products were observed.

### **3.7 Vermiculite Insulation**

No vermiculite containing products were observed. Visual observations were made above the ceiling and through any hatches.

### **3.8 Other Asbestos Containing Building Materials**

One (1) sample the core of a fire door was collected from the gym. Analysis of the sample did not identify the presence of asbestos (reference sample 02-02-900-S041).

## **4.0 LBP SURVEY FINDINGS**

Analytical results indicate that four (4) of the samples collected of painted surfaces would be considered a risk to worker exposure during construction or renovation activities (with lead concentrations exceeding 0.06%). The green paint as observed on a door in Room PE-4001 (reference sample 02-02-900-L004) contains 0.13%, the brown paint as observed in Room 3012 (reference sample 02-02-900-L005) contains 0.12%, the green paint as observed in Room 2006 (reference sample 02-02-900-L006) contains 0.22% and the black paint as observed on the exterior (reference sample 02-02-900-L014) contains 0.35% and the same paint colours located elsewhere, should be managed as lead-containing.

Results indicate that where detected, all other paint samples contain less than 0.06% lead.

## **5.0 RECOMMENDATIONS**

Asbestos containing materials have been identified in the Site Building. Listed below are a series of general recommendations for the Site Building. Recommendations provided in the Overview Report may also be reviewed and applied to this building.

### Friable ACMs

Friable asbestos containing materials identified inside the Site Building include: parking cement, tank insulation and ceiling stucco.

1. Type III (high risk) asbestos abatement procedures should be carried out for the scheduled removal of greater than 1 ft<sup>2</sup> of friable asbestos containing materials. Alternatively, Type II (moderate risk) glove bag abatement procedures may be applied where practical.
2. Type II (moderate risk) asbestos abatement procedures should be carried out for the scheduled repair or enclosure of friable ACMs or for the removal of less than 1 ft<sup>2</sup> of material.

### Potentially Friable Materials

Non-friable materials with the potential to become friable during renovation and demolition activities were identified inside the Site Building, specifically plaster.

1. Under the NL guidance documents for moderate and low risk asbestos abatement procedures, quantities of these materials within an enclosure exceeding 100 ft<sup>2</sup> should be removed using Type III (high risk) asbestos abatement procedures. Quantities less than 100 ft<sup>2</sup> but exceeding 10 ft<sup>2</sup> should be removed using Type II (moderate risk) asbestos abatement procedures, while quantities less than 10 ft<sup>2</sup> should be removed using Type I (low risk) asbestos abatement procedures.

### Non-Friable Materials

Non-friable asbestos containing materials identified inside the Site Building, specifically vinyl floor tiles.

1. Type I (low risk) asbestos abatement procedures should be carried out for the scheduled disturbance of any non-friable materials provided the materials can be removed intact, and without the use of powered hand tools.

2. Should the use of powered hand tools or excessive breakage of the materials become necessary, Type II (moderate risk) asbestos abatement procedures should be adopted.

#### Lead Based Paints

Do not grind, sand, torch or cut lead materials without using proper procedures, as material poses a health hazard if disturbed by these methods.

Any painted surfaces visually matching the identified paint colors should be managed as lead containing and necessary precautions (i.e.: worker protection) should be employed prior to the disturbance to these materials.

Should there be any questions pertaining to the contents of this report, please do not hesitate to contact the undersigned at our office.

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommended that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency
