

# SAFETY GLASSES

## SAFETY GLASSES: NOT YOUR ORDINARY GLASSES

Safety glasses have impact-resistant lenses that come in prescription and non-prescription. Safety frames are stronger than street-wear frames, and they are often heat resistant. The frames are designed to prevent lenses from being pushed into the eyes.

- Use safety glasses that are CSA approved.
- Choose frames that fit close to the face and sit securely on the bridge of the nose.
- Clean your safety glasses daily.
- Avoid rough handling that can scratch lenses. Scratches impair vision and can weaken lenses.
- Store your safety glasses in a clean, dry case where they can't fall or be stepped on.
- Replace scratched, pitted, broken, bent or ill-fitting glasses.
