

THE FIFTEENTH W.J. BLUNDON MATHEMATICS CONTEST*

Sponsored by
The Canadian Mathematical Society
in cooperation with
The Department of Mathematics and Statistics
Memorial University of Newfoundland

February 18, 1998

- (a) Find the exact value of $\frac{1}{\log_2 36} + \frac{1}{\log_3 36}$.
(b) If $\log_{15} 5 = a$, find $\log_{15} 9$ in terms of a .
- (a) If the radius of a right circular cylinder is increased by 50% and the height is decreased by 20%, what is the change in the volume?
(b) How many digits are there in the number $2^{1998} \cdot 5^{1988}$?
- Solve : $3^{2+x} + 3^{2-x} = 82$.
- Find all ordered pairs of integers such that $x^6 = y^2 + 53$.
- When one-fifth of the adults left a neighborhood picnic, the ratio of adults to children was 2:3. Later, when 44 children left, the ratio of children to adults was 2:5. How many people remained at the picnic?
- Find the area of a rhombus for which one side has length 10 and the diagonals differ by 4.
- In how many ways can 10 dollars be changed into dimes and quarters, with at least one of each coin being used?
- Solve : $\sqrt{x+10} + \sqrt[4]{x+10} = 12$.
- Find the remainder when the polynomial $x^{135} + x^{125} - x^{115} + x^5 + 1$ is divided by the polynomial $x^3 - x$.
- Quadrilateral $ABCD$ below has the following properties: (1) The mid-point O of side AB is the centre of a semicircle; (2) sides AD , DC and CB are tangent to this semicircle. Prove that $AB^2 = 4AD \times BC$.
