Introducing Competency By Design: Newsletter 10

Introducing our CBD App!

A refresher on EPAs

Residents will now be expected to have entrustable professional activities observed - directly or indirectly

1. A resident will identify an activity to improve or complete
2. Staff provides feedback or coaching on the encounter
3. The resident fills out the EPA in the new app in collaboration with staff
4. Staff approves the activity on the resident's device

MUNCAT App

The MUNCAT app will be put in place this month for residents to fill out EPAs after activities are completed

The resident will fill out the activity on their device in collaboration with you. Review each component of the EPA while you are going through this and assess the level of independence the resident had in the activity. Take this opportunity to provide ACTIONABLE feedback to the resident.

If you say "yes" to any professionalism or safety concerns, you can elaborate in the notes section. The IM program director will clarify these with you if there is nothing specified.

You'll be emailed a PIN after the first EPA you fill out. To ensure that your PIN is used only by you, you will receive email notifications each day that your PIN is used.
