

TANL CONFERENCE 2018

THROMBOSIS IN EVERYDAY CLINICAL PRACTICE

FACULTY OF MEDICINE,
Memorial University of Newfoundland
and via Web-conferencing

Saturday, September 22, 2018

7:30 AM - 1:00 PM

This CPD event is available to attend
in person or via webinar

THE KEYNOTE SPEAKER IS **DR. MARC CARRIER (MD, MSC, FRCPC)**,
A RECOGNIZED WORLD LEADER IN THE FIELD OF THROMBOSIS.

Areas of Focus:

- Multiple practical everyday questions*
- New/direct oral anticoagulants
- Cancer associated thrombosis
- Dual and triple antiplatelet therapy
- Multidisciplinary management of thrombosis

Please visit: www.med.mun.ca/opd
for more information and to register

***FEATURING
INTERACTIVE
RAPID-FIRE QUESTIONS**

- 1-3 slides per question
- Audience can choose questions
(from those on next page)

@TANLupdates, @MarcCarrier1

TANL CONFERENCE 2018 LEARNING OBJECTIVES:

- Answer multiple practical every day thrombosis questions faced in clinical practice*
- Select an appropriate new/direct oral anticoagulant for a patient
- Describe the updated management of cancer associated thrombosis in clinical practice
- Determine appropriate antiplatelet therapy in patients with coronary artery disease and peripheral arterial disease
- Demonstrate the pharmacist's role in providing an outpatient thrombosis service

*RAPID FIRE QUESTIONS IN THROMBOSIS AND ANTICOAGULATION

From a VTE perspective, is my patient safe to fly?	If my patient has Afib and they develop an intracranial or GI bleed, should I restart anticoagulation afterward to prevent a stroke?
Should superficial vein thrombosis be treated with NSAIDs alone or is there a role for anticoagulants?	My patient is going for a dental procedure , what should I do with their anticoagulation ?
Should I order a follow up USS to see if the clot is gone?	Which drugs or herbal medications are contraindicated /should be avoided while on various anticoagulants ?
If the clot is gone on a follow up ultrasound or CTPA, can I stop anticoagulation ?	What should a patient do if they miss a dose of their anticoagulant?
Can my patient ever receive estrogen containing therapy again after a hormonal associated VTE?	Do graduated compression stockings prevent post-thrombotic syndrome in patients with DVT?
How do I switch between anticoagulants ?	Does the presence of an inherited thrombophilia mean that a patient should be on lifelong anticoagulation therapy ?
How do I advise on alcohol and foods for patients on anticoagulation ?	Which anticoagulant should I use in renal failure and how often should I check the renal function?
My patient with atrial fibrillation is frail and has a high risk of falls, should they be anticoagulated?	Should I prescribe below knee or above knee stockings to treat patients with post-thrombotic syndrome ? Can the sock be worn only on the affected leg?
Should I treat a below knee DVT ?	How soon after an episode of pulmonary embolism or proximal DVT can my patient exercise and go back to work ?
Management of abnormal uterine bleeding on anticoagulation therapy	How can I get coverage of the DOAC's ?
