MEMORIAL
UNIVERSITY

Fall 2016, 1-2 pm every other Wednesday, A2071

Cognitive science is the study of mind, intelligence, language, and information. It overlaps the traditional disciplines of **computer science, linguistics, neuroscience, philosophy, and psychology** (among others). The aim of this series is to **foster interdisciplinary discussion** along these lines here at **Memorial University**.

September 14: Todd Wareham (Computer Science)

“Computational Complexity Analysis in Cognitive Science:
Foundations and Applications”

September 28: Joe Argentino (Music) & Sara McKenzie (Linguistics)

“Parallel Patterns between Language Games and Serial Music”

October 12: Arthur Sullivan (Philosophy)

“The Psycho-Linguistics of Irony”

October 26: Catherine Penney (Psychology)

“Is educational software the key to individualized instruction in
beginning reading?”

November 9: Ed Brown (Computer Science)

“Problems in Computational Theories of Mind”

November 23: Yvan Rose (Linguistics)

“The A-map: Connecting linguistic theory with models of speech
articulation”
