

# Are you a farmer who knows how to weld?

The Prairie Agricultural Machinery Institute (PAMI) is looking for Newfoundland and Labrador farmers with basic welding skills interested in building one low-cost Roll-Over Protection Structure (ROPS) using a design and instructions developed by their engineers. This initiative is part of the national *Low Cost Roll-Over Protective Structures Intervention Project* funded by Agrivita through the federal government's Growing Forward program, with support from Memorial University's SafetyNet Centre for Occupational Health and Safety Research. The project is seeking to develop a low cost ROPS design that could be built by farmers for installation on older tractors. PAMI will cover the cost of the steel and shipping and will pay \$250 for labour. The ROPS will be shipped to PAMI for testing purposes.
